EARLY LETTERS, IOS APP, V1.0 (ON DEVICE)

Customer journey, every screen

147 steps across 20 journeys. Happy and unhappy paths. Each screen is the real app interface, shown in an iPhone 17 Pro style frame, with the product lead, design lead and quality engineer reviews beside it.

Open findings: 13 blocker, 108 major, 169 minor.

Screens come from the app's own code rendered through its web export, not from the iOS simulator. Native audio, purchase sheets and notifications are not shown; steps that depend on them say so. The phone frame is an illustration.

PRODUCT LEAD: SUMMARY

Product critique: Early Letters v1.0 journey (116 steps)

Method: read INDEX and every step JSON, looked at about 25 of the 116 PNGs directly (first run, Tonight, listening, Review, letter page, Book, Plan, Family, Read together), judged the rest from step text and notes. Checked against CLAUDE.md, VOICE.md, docs/DECISIONS.md on origin/develop and origin/main (D-051 is on main only) and apps/web site.ts. I did not fetch earlyletters.com. Totals: 7 blocker, 30 major, 42 minor; 70 steps ok, 41 fix, 6 gap. Detail in product.json.

Top 10 issues

1. **D-051 is not in the app (blocker).** Free is now the first 2 letters per account, then Plus. The app has no letter counter, no third-letter paywall, no held-in-progress-letter state, and Plan, Settings and the book gate still say 'free, always' and 'writing stays open' (J12-01, J03-08, J03-06). I found no free-letters code in the mobile or core source.
2. **The app writes words for the parent (blocker).** 'Not much today' stores 'Sunday. Not much today. Just Asha, and us, and an ordinary day.' signed From Mama, and it shows in the Book (J08-02, J08-03). That breaks the constitution. The step note claiming it never appears in the book is wrong.
3. **Blank crash screen (blocker, J20-01).** No message, no way back, in an app holding irreplaceable voice recordings. The unknown-route page is also a developer screen (J19-01).
4. **No real purchase screens (major).** Price, trial, renewal terms and any 'Redeem a code' row (D-052) are not captured; Apple 3.1.2 needs them beside the buy button.
5. **Speech model download is invisible (major).** English shows '575 MB, not on this phone'. No consent, Wi-Fi, progress or failure states. The first night may end in 'waiting for its words' with no action (J09-04, J10-09 are dead ends).
6. **Delete is immediate, with no confirm, next to Make private (major, J10-01, J10-06).** The unsaved take has a confirm; the saved letter and its voice do not.
7. **Dead doors in v1.0 (major).** 'I was invited', the Family tab, the 'Family can read' switch and 'We'll let you know here' promise features that do not exist and cannot notify (D-055).
8. **D-074 not applied (major).** 'Lightly tidied', 'Tidying' and 'tidy' still appear on about fifteen screens.
9. **Birthday silently defaults to today (major, J01-05).** A 7-month-old becomes '0 days' and every chapter and prompt is wrong.
10. **Durability and website parity (major).** On-device only, with Export as the only safety net and no new-phone story. D-073 says backup ships in v1.0; the website says Plus 'backs up every recording'. Neither matches the app.

Decisions needed from the founder

- **D-051 open edges**: do family letters count; what a second child's book gets free; does a 'Not much today' marker or a silent recording count as a letter; is Read together still gated (3 free sessions) now that letters are gated.
- **Quiet day**: approve removing generated text (marker only).
- **Backup (D-073) vs on-device only**: in or out of v1.0, then align the website and store copy.
- **Family surfaces in v1.0**: hide the Family tab, 'I was invited' and the 'Family can read' switch, or keep a defined invited-person page.
- **Gate order**: age gate before welcome (current, D-006) or after (D-043).
- **Delete**: approve a confirm sheet and a 30 day Recently deleted list.
- **Offer codes (D-052)**: approve the mechanism so a Redeem row can be designed.

DESIGN LEAD: SUMMARY

Early Letters v1.0: design critique (Design Lead)

Scope: all 116 captured steps (iPhone 17 Pro web render, 402 x 874, English, default text size) plus the full-length captures I opened (J06-01, J09-03, J10-05, J13-03, J16-01, J17-01, J17-03). Judged against `packages/design-tokens`, `docs/design/*` (origin/develop), `docs/brand/BRAND_SYSTEM.md`, `VOICE.md`, and the website atmosphere components on origin/main. Contrast ratios were computed from token hex values. Detail per step is in `design.json`.

Totals: 1 blocker, 47 major, 90 minor. Step verdicts: 37 ok, 76 fix, 4 gap, plus the system-level `_journey` entry (many findings repeat across steps; the real count of distinct issues is about 40).

What is good and should be kept: the voice and copy ("Exactly as you said it", "Kept. Rest well."), equal Speak and Type doors, pinned primary buttons with the bottom thumb zone on Review, Write and onboarding, serif letter text at 20/32 with the right-aligned italic signature, the in-place "why was this changed" panel, no streaks or counts anywhere, equal-weight consent buttons, and the Reading size sheet that previews each size.

Top 10 issues

1. **J20-01 blocker: a crash is a blank white page.** No message, no way back, white flash in a warm or dark app. Add an ErrorBoundary and set the native root background to `bg`.
2. **Dark mode leaks light-mode values (J18-02 to J18-06).** Tab bar stays cream (17:1 bright strip), Settings gear 1.24:1, lock icon 1.13:1, back arrow 3.16:1, scrubber track cream, recording disc uses light `recording` (3.29:1). J18-01 also shows a half-themed screen on the Dark selector (may be a transition frame).
3. **The website's principles are absent from the app.** No LampLight, grain, paper texture or vignette; atmosphere tokens unused; the opening-quote pair is on none of the 116 screens. Warm paper without light.
4. **Review (J06) is the product's trust screen and its hierarchy is the weakest.** Tidy-up marks are about 10 pt dotted tokens, the first-time trust note is 13 pt, nine controls over two screens sit under a 130 pt footer, and edit mode (J06-08) drops Literata and the focus ring while the only exit is a 14 pt link.
5. **Machine-written sentences appear as the parent's words** (J08-03 "Just Asha, and us, and an ordinary day." signed From Mama; J10-10; "Dear Asha," ghost). Conflicts with the constitution; needs a distinct app-voice style or removal.
6. **Navigation chrome has five idioms** (`< Back`, arrow + inline title, Close text, X circle, bottom Close) and no large titles on pushed screens. Tonight has no Settings or child switcher; the Book's switcher is a 12 pt caps label above a duplicate title (J01-14, J03-04).
7. **Selection and affordance drift:** Yes/No fill only, chips with check, day pills with no edge (1.06:1), "Not quite" solid accent competing with the primary, and value rows with no chevron (Spoken language, child fields, model state in J14-01, Restore purchases).
8. **Empty, error and loading states have six treatments**, and loading ("Writing down what you said", J05-03) is a still card with no sense of working. Unmatched route (J19-01) is Expo's black default with the raw URL.
9. **Tap targets and reach:** many controls render under 44 pt (marks, Got it, text links, 36 pt X, Aa, gear); primaries on Book empty, Export, gates and Family sit mid-screen or below the fold (J17-01 CTA is under the tab bar).
10. **Coverage and accessibility gaps:** nothing captured in hi, es, zh, fr, ar (RTL), pt or AX text sizes; roles and labels are not in the step data; Spoken language, Storage and add-child were not captured. Also US-only helplines in a seven-language app (J16-05), and the first-run language pick starts a 575 MB download with no size or Wi-Fi cue (J01-12, J14-01).

System-level recommendations

- **One theme binding.** Navigation container, tab bar, headers and every icon colour resolve through `useTheme`; lint against hex and `tokens.light` outside the provider; extend the J18 dark pass to every route.
- **Atmosphere and brand device.** A single `Atmosphere` wrapper (static grain, radial lamp pool from `atmosphere.lamp`, tone paper|night, off under Reduce Motion and Reduce Transparency) and a `QuotePair` from the brand registry, used on five screens only: Welcome, Tonight, Listening, Letter, End of book. No continuous loops except the voice-driven glow (MOTION principle 1).
- **One ScreenHeader and one Sheet.** Root large title; pushed with chevron back and collapsing large title; modal with Close. Retire the arrow-only, bottom Close and text-only Back variants.
- **One selection pattern.** accentSoft fill + accent edge + check for ChoiceGroup and Chip; solid accent only for the single primary; ListRow always shows a chevron, a value or a switch.
- **One StateScreen** (art, title, body, full-width bottom action) plus a Breathe loading variant, a root ErrorBoundary and `+not-found`.
- **Type discipline.** One Dateline component (`letterDateline` x `readingScale`), trust copy never below `subhead` 16, one display size for finales; Large print scales metadata too.
- **Targets and reach.** Quiet and link buttons min-height 44 with hitSlop; bottom-action rule for primaries; add bounding-box assertions to the web journey run and an Accessibility Inspector pass on device.
- **App-voice style** for every system note (no signature, never first person), decided with product and content.

- **Verification plan (qa).** Device pass for what the web render cannot show: teal switch thumbs, edit-field outline, scrim, pickers, keyboard avoidance, Dynamic Island, haptics, motion and Reduce Motion (layout shifts: prompt swap about 32 pt, Listening to Paused 13 pt, Private chip 20 pt, note dismissal about 135 pt), VoiceOver names for icon-only controls, seven locales including forced RTL, and Dynamic Type to AX5.

Limits of this review

Stills cannot show motion, haptics or sound, so calm motion is unverified. Web artifacts (0 safe-area insets, teal RN-web switch thumbs, default input outlines, native pickers) are called out where they could mask or imitate defects; none is claimed as an app defect without that caveat. I did not reach the live website; website tone is taken from `apps/web` on origin/main. Accessibility labels could not be inferred from the step data.

QUALITY ENGINEER: SUMMARY

Quality critique of the v1.0 iOS journey

Owner: Quality Engineer. Method: all 116 step files read; screenshots looked at for the key screens (age gate, promise, child step, mic denied, Review, deleted, export failure, crash); every other screen judged from its step text plus the source in `apps/mobile/src`. Web captures are not defects: anything a phone does differently is marked "from code reading, not observed". Findings: `quality.json` (5 blocker, 31 major, 37 minor across 117 entries; 64 steps are ok).

Top 10 risks

1. **No error boundary or crash handler (J20-01).** Blank page on web; a throw in an event handler or timer is fatal in a native release. A failing DB open or migration locks the person out of Export and recordings.
2. **Delete is permanent to the person and not really deleted (J10-06).** Undo lives only on that screen; no Recently deleted; tombstoned audio and text stay on disk and in backup.
3. **Durability gates have never run on a phone.** Kill-during-save (500), backup/restore drill, Maestro flows and native build evidence are absent. A killed M4A may not play and the sweep does not check.
4. **First-run mistakes are permanent (J01-07, J01-08, J03-07).** Birthday defaults to today, a due date never becomes a birthday, and name/date/signature cannot be edited or a book removed.
5. **Deep link `scribe://listen` starts recording on mount (J05-04); unknown links hit the default 404 (J19-01).**
6. **Recording is cut by screen lock; Read together autoplay stops at lock (J05-01, J11-03).** No keep-awake; background audio is off.
7. **Crash reporting is promised but does not exist (J04-04, J16-02)**; no OTA channel for hotfixes.
8. **Typing and Review edits can be lost (J07-02, J06-08)**: debounce with no flush, uncaught timer errors, edits held in component state only.
9. **No way to discard a draft after Finish (J06-12, J05-08)**; export omits drafts, orphans and deleted items while saying "every letter and recording" (J15-01).
10. **Store review and budgets unproven**: "coming soon" Family tab and dormant sign-in SDKs/entitlements (J17-01); no perf harness, no CI size gate, native size unmeasured.

Also noted: local `raw_transcript` immutability is by SQL convention only (no local trigger; CLAUDE.md's trigger is the server schema).

NFR table

| NFR | Target | Evidence today | Status | |---|---|---|---| | Data durability | Zero letters lost; 500-kill gate (PRD 7.4) | WAL + synchronous=FULL, draft before mic, atomic save, launch sweep, unit tests (`test/sweep.test.ts`); no device or kill-gate evidence | Gap | | Immutable raw, reversible edits | Trigger-enforced | Server trigger only; local by WHERE clauses; edits reversible in Review, not after save | Gap | | Crash handling | Crash-free sessions 99.8% (PRD 7.5) | No boundary, no handler, no reporter; ASC/Organizer only | Fail | | 404 / bad links | Designed screen | Default Unmatched Route; unrestricted route passthrough | Fail | | Cold start / first frame | p50 1.2 s, p90 2.0 s (SE 3) | No harness (TDD 06 "BL-044 human"); services deferred after first frame (by design, read) | Unproven | | Record start | p95 500 ms | Not measured | Unproven | | Local save | p95 200 ms | Single transaction by design; not timed | Unproven | | Book chapter of 60 letters | p95 500 ms | Whole-table reload per change; no fixture | Unproven | | Transcription | 2-min letter 30 s on SE 3 | Not measured; 575 MB model, about 1 GB resident (estimate) | Unproven | | Export | 230 MB in 2 min; complete | Verified ZIP with manifest hashes; omits drafts/orphans/deleted; no ZIP64 | Partial | | App size (D-065) | Download under 40 MB | JS 11.6 MB of 12 MB; native/thinning not measured; no CI gate | Unproven | | Accessibility | WCAG 2.2 AA, AX5, VoiceOver | Token contrast tests, reduce motion, VoiceOver rows by design; no AX5/axe in CI, no VoiceOver evidence, 900 ms save card | Partial | | Privacy of logs/analytics | No content anywhere | Opt-in analytics, allowlist, no content in paths read; no client log canary; no crash reporter | Partial | | Network egress | Only disclosed hosts | Code shows models host, StoreKit, PostHog after consent; google.com not from app code; device capture needed | To verify | | Data at rest | Data Protection class | Set in `app.config.ts`; DB not separately encrypted (accepted); backups include deleted | Partial | | Localisation | 7 spoken languages | UI English only; no ar/hi/zh layout fixtures | Gap | | Traceability | Req id to test | About 30 ids in titles; no TRACE.md; no component tests; web e2e not in CI | Gap | | App Store readiness | No review blockers | "Coming soon" tab, dormant sign-in entitlement and SDKs, counsel-pending mic string, no plist lint | Risk |

Honesty note: nothing here was run on an iPhone. Items marked unproven or "from code reading" need the S1 session in `docs/qa/DEVICE_TEST_PLAN.md`.

ACROSS THE WHOLE JOURNEY

Gaps that are not one screen

Product lead: journey-level findings

BLOCKER D-051 (founder, 4 Oct, origin/main) is not in the app. There is no letter counter, no paywall at the third letter, no 'in-progress letter held on the phone' state, no lapsed-member state, and the Plan, Settings and gate screens still say 'free, always'. I found no free-letters code in apps/mobile/src or packages/core/src. The website (apps/web site.ts) already says 'Your first two letters are free'.
Fix: Build and capture: free-letters counter (quiet), the paywall at letter three (never discards the in-progress letter), the held-on-phone state, lapsed state. Rewrite Plan and gate copy. Close D-051 open edges 1 to 8 first.

BLOCKER The quiet-day line writes a sentence in the parent's voice and stores it as their letter (J08-02, J08-03). This breaks the constitution and VOICE.md's no-machine-writing rule.
Fix: Remove generated text; marker only.

MAJOR No on-device purchase screen is captured, so price, trial, auto-renewal terms and 'Redeem a code' (D-052) cannot be reviewed. Web shows only 'not available on this device'. Apple 3.1.2 needs price and terms next to the buy button.
Fix: Capture the real StoreKit offer screens on an iPhone: offer, trial, purchased, restored, failed, lapsed.

MAJOR Speech model download is invisible. Speaking needs a speech model (575 MB for English per J14-01), and no screen shows consent, size, Wi-Fi, progress, failure or full-storage. The first night could end in 'a recording waiting for its words' with no explanation.
Fix: Add model-download screens to first run and Recordings. Confirm whether English is bundled (D-065).

MAJOR Interruptions during recording are not shown: phone call, app to background, screen lock, low storage, microphone taken by another app. These are the normal conditions for a parent with a baby.
Fix: Capture and design these states, each saying the words so far are kept.

MAJOR Durability: v1.0 is on-device only and the only safety net is Export. There is no new-phone, reinstall or lost-phone story, and no gentle nudge to export. D-073 (founder) says encrypted backup of recordings ships in v1.0, which conflicts with 'on-device only'. Copy and the website (which says Plus 'backs up every recording', apps/web/src/content/site.ts on origin/main) promise more than the app does.
Fix: Founder to confirm whether backup is in or out of v1.0, then align the app, the website and the store listing. Add a restore-from-iPhone-backup note.

MAJOR No way to delete a child's book or erase all data on the phone; delete exists only per letter. There are no accounts, so no Apple deletion route, but customers still expect a clean exit.
Fix: Add per-book delete and 'Erase everything' with calm confirms.

MAJOR Two doors to nowhere in v1.0: 'I was invited' on Welcome and the Family tab (plus the 'Family can read' switch). D-055 limits launch to co-parent only, and there are no accounts to share through.
Fix: Hide all of them until sharing works, or define a minimal invited-person page. Decision for founder.

MAJOR Vocabulary drift from D-074: 'lightly tidied', 'Tidying' and 'tidy' appear on about fifteen screens (promise, letter page, Recordings, Settings footer, export). A founder decision is not applied.
Fix: One content pass, then rerun the journey capture.

MINOR 'Private' versus 'in the book' has no consequence in v1.0 (nobody else can see anything), yet it is offered at every save and warned about on the listening screen. A parent may think book letters are visible to others. It is unclear from the screens whether Read together and Export include private letters; I did not check the code.
Fix: Explain it once, or hide until sharing exists. State clearly what Export and Read together include.

MINOR Missing screens in the capture: Storage, Help, Write to us, in-app Terms and Privacy pages, About, a lock-screen notification example (VOICE.md notification rules), Tonight for a not-yet-born child, a second waiting draft, search or jump in a long Book, VoiceOver and Dynamic Type states.
Fix: Add to the next capture run.

MINOR First run is six screens (age, welcome, promise, child, signature, 'book is open') before the first letter; 'The book is open' is an interstitial. D-043 intended fewer.
Fix: Fold 'The book is open' into Tonight, or open Tonight with Speak ready.

MINOR Not verified: I did not fetch earlyletters.com (read apps/web/src/content/site.ts on origin/main instead), and I looked at about 25 of the 116 PNGs directly; the rest were judged from their step JSON text and notes. Dark-mode screens were not judged for contrast. The 0-inset web render hides real safe-area problems (the tab labels look clipped at the bottom).
Fix: Re-check on a device.

Design lead: journey-level findings

MAJOR Dark mode leaks light-mode values: tab bar, Settings gear, lock icon, back arrow, scrubber track and the recording disc use light tokens or hard-coded ink on dark (ratios 1.13 to 3.29, see J18-02 to J18-06). Only 6 of 116 captures cover dark and they already expose six defects, so the unseen screens (Settings, Plan, Review sheets, Family) are probably affected.
Fix: Bind the navigation container and tab bar to useTheme; ban hex and tokens.light outside the theme provider with a lint rule; extend J18 to every route.

MAJOR The website's design principles are not in the app. The site ships LampLight, Grain, PaperTexture, Vignette and Motes (apps/web/src/components/atmosphere); the app ships none, and atmosphere tokens (lamp, lampGold, lampRose, lampDusk, duskSurface) are unused. The opening-quotation pair appears on none of the 116 screens (Welcome, Letter, End of book, Save are the obvious homes). The result is competent but flat: warm paper without light.
Fix: Build one Atmosphere wrapper (static grain png + radial gradient, tone paper|night, Reduce Motion/Transparency aware) and one QuotePair from the brand registry; use them on Welcome, Tonight, Listening, Letter, End of book only.

MAJOR Navigation chrome has five idioms: '< Back' text (onboarding), arrow plus 17 pt inline title (Settings, Letter), 'Close' text top-left (Review, Write, Read together), circular X (sheets), bottom text 'Close' (invite). Large titles exist on tab roots (serif 34 pt) but not on Settings, Plan, Export; root titles sit at three heights. Not HIG-conformant for push screens.
Fix: One ScreenHeader with three variants (root large title, pushed with chevron back and large title that collapses, modal with title + Close) and one Sheet pattern.

MAJOR Selection and affordance are inconsistent: Yes/No (fill only), Birthday chips (accentSoft + check), day pills (solid accent, no edge), 'Not quite' (solid accent, competes with the primary), list checks. Rows with values but no chevron (language onboarding, child fields, Restore purchases, Tidying, English model, Family can read).
Fix: ChoiceGroup and Chip are the only selection components: accentSoft + controlBorder-accent edge + check. Solid accent only for the one primary button per screen. ListRow always shows chevron, value or switch.

MAJOR Empty, error and loading states have at least six different treatments: EmptyState with start-aligned art (Book), centred text + small button (J06-13), floating card (J05-04), heading + button (J10-11, J11-07), static loading card (J05-03), Expo default 404, blank crash. None has a loading rhythm that says 'working'.
Fix: One StateScreen built on EmptyState (art, title, body, full-width bottom action), a Breathe loading variant, a root ErrorBoundary and +not-found.

MAJOR Tap targets: several controls visibly under 44 pt: tidy-up marks (about 10 pt), 'Got it', panel 'Close', 'Not much today', 'Another thought', 36 pt sheet X, 12 pt caps child switcher, Aa, gear. hitSlop is declared for Chip and IconButton but text links and quiet buttons need min-height 44.
Fix: Quiet/link Button min-height 44 with hitSlop; add an on-device Accessibility Inspector pass; add web bounding-box assertions to the journey run for role=button/link.

MAJOR Machine-written sentences appear as the parent's words: the quiet-day note (signed 'From Mama' in the Book), the 'nobody spoke' note signed 'From Mama', and a 'Dear Asha,' ghost in the Write view. Nothing visually separates app voice from the parent's.
Fix: Define an 'app voice' style (no signature, muted Mukta italic, tinted `surface`, never first person) and use it for every system note; confirm 'Dear Asha,' with product.

MINOR Type ramp drift: three dateline styles (caps 12 pt tracking on cards and Review; sentence 13 pt on the Letter; bold 12 pt on Read together), 13 pt used for trust copy (Review note, helper lines, provenance), below footnote 14, and the finale heading about 40+ pt vs display 34. Large print scales body only.
Fix: One Dateline component (letterDateline token x readingScale); trust copy never below subhead 16; restrict caption 13 to captions.

MINOR Layout shifts break calm: prompt swap (about 32 pt), Listening to Paused (13 pt), Private chip insertion (20 pt), first-time note dismissal (about 135 pt), stop-screen button (37 pt). Motion cannot be judged from stills.
Fix: Reserve space or animate with tokens.motion.standard (Reduce Motion: fade 200 ms); record screen captures on device to verify.

MINOR Primary action placement varies: pinned and full width on onboarding, Review, Write, Read together (good) versus mid-screen content-width on Book empty, Export, Plus gates, end of book and Family (below the fold). Top-corner controls (gear, switcher, Hear it, Aa, Close) sit in the hardest reach zone on a 6.3 inch phone.
Fix: Bottom-action rule: one primary at 56 pt pinned above the tab bar or home indicator on every screen that has one.

MINOR Web artifacts and device-only behaviour: teal switch thumbs (RN-web default), square amber edit outline and Times fallback in the edit field, scrim colour, native pickers, keyboard avoidance, Dynamic Island insets, haptics. None can be confirmed as app defects or fine from these captures.
Fix: QA a device pass with these items listed; record the toggle in components/platform/toggle.

MAJOR Coverage gap: all 116 captures are English at default text size. Nothing shows hi (Devanagari in Tiro/Mukta), es, zh, fr, ar (RTL) or pt, or Dynamic Type up to AX5. Likely stress points: two-up 'Birthday | Not here yet', 'Add to Asha's book', 'Keep it word for word', 'Sounds like me | Not quite', tab labels, 56 pt footers at AX3. Spoken language, Storage and the add-child form were not captured at all (they crash on web).
Fix: Capture each locale plus AX3 and forced RTL on a device; add them to the journey harness; fix to the spec (stack at xxxLarge, never truncate letter text, D-027).

MINOR Accessibility cues cannot be verified: step JSON holds visible text only, not roles or labels. Icon-only controls (Aa, gear, X, back, play, Hear it, remove name) need explicit names; focus order and the 'adjustable' scrubber were not seen.
Fix: Export role/name/order into step JSON (accessibility tree dump) and review on device with VoiceOver and Voice Control.

MINOR Monetisation and apology sit before core settings and on both gates; the first Settings screen leads with 'Early version' and Plan.
Fix: See J16-01; keep Plus out of the first scroll of Settings.

Quality engineer: journey-level findings

BLOCKER No error boundary, no crash handler and no recovery screen (see J20-01). Native behaviour unobserved; web is blank. Every synchronous SQLite call in an event handler or timer is a potential fatal crash.
Fix: Root ErrorBoundary + open() failure screen + global handler; tests per J20-01.

BLOCKER Data durability gates not run: the kill-during-save test (500 iterations, PRD 7.4), the iCloud backup/restore drill (BL-284) and the first native build and device session have no evidence (docs/qa/evidence holds only a README; Maestro flows E2E-01 to 15 "have not been run", e2e/README.md). The durability claims are code-reviewed (WAL + synchronous=FULL, draft before mic, atomic save, sweep: all verified by reading and by unit tests such as test/sweep.test.ts) but not shown on an iPhone.
Fix: Run S1 of docs/qa/DEVICE_TEST_PLAN.md on SE 3 and iPhone 15, 500-kill harness, backup/restore; file evidence before submission.

BLOCKER Delete is effectively permanent and not honoured (J10-06): no Recently deleted, no purge, tombstoned audio and text remain on disk and in backup.
Fix: Recently deleted + purge; test delete/restore/purge.

MAJOR Local immutability of raw_transcript is by convention only: CLAUDE.md says a database trigger enforces it, but that is the server schema. The local SQLite migrations contain no trigger (grep TRIGGER in db/migrations.ts is empty); store.ts guards raw with WHERE clauses (setDraftTranscript, setWordsForWaitingEntry, ON CONFLICT list) so any new UPDATE path could overwrite it, and v1.0 has no server copy.
Fix: Add a local migration with BEFORE UPDATE OF raw_transcript triggers on entries and drafts (allow only the one-time set), plus a test that every store function leaves raw untouched. [DATA-REQ-040] local variant.

MAJOR Child profile cannot be edited or a book deleted (J03-07), birthday defaults to today (J01-07) and a due date never becomes a birthday (J01-08). Together these make a first-run mistake permanent.
Fix: Profile edit screen and due-date-to-birthday flow.

MAJOR No 404 screen (J19-01) and unrestricted deep-link routing, including /listen which starts recording on mount (J05-04).
Fix: Route allowlist in redirectSystemPath; +not-found.tsx; tests.

MAJOR Performance budgets (PRD 7.1: cold start p50 1.2 s/p90 2.0 s on SE 3, record start p95 500 ms, local save p95 200 ms, switch child p95 300 ms, chapter of 60 letters p95 500 ms, Settings under 300 ms, export 230 MB in 2 min) have no harness: TDD 06 lists "no harness (BL-044 human)", CI (ci.yml) has no perf, size or device job. Book/Tonight read the whole table synchronously on every store change; no 2,000-letter fixture.
Fix: Build a perf harness (Maestro timing + Instruments run per release candidate, 200 samples) and a SQL-level perf test with a 5-year fixture in CI.

MAJOR Size budget D-065 (download under 40 MB): the JS side is measured (Hermes bytecode 11.6 MB against a 12 MB sub-budget, docs/ops/APP_SIZE.md) but the native binary and App Thinning figure are "not measured yet", and CI has no size gate. whisper.rn, Google Sign-In, Supabase, PostHog, passkeys and the dev client are linked although v1.0 does not use several of them.
Fix: Add scripts/size/measure.ts to CI (JS) and the thinning report to the release checklist; remove unused SDKs from the v1.0 build.

MAJOR Accessibility programme is design-strong but unproven: token contrast pairs are tested (packages/design-tokens/test/tokens.test.ts, AA and 1.4.11, Increase Contrast), Reduce Motion is honoured (useMotion), type scales uncapped, VoiceOver rows exist for Review edits and the player is adjustable. But LEGAL-REQ-051 requires axe/RN lint and AX5 snapshots in CI (none in ci.yml), no VoiceOver evidence exists, touch targets are only asserted by min-h classes, and a few time limits remain (900 ms save card, J06-10). No accessibility statement in Settings (J16-01).
Fix: Add AX5 snapshot tests, an RN accessibility lint, the VoiceOver script run with evidence, and the statement link.

MAJOR Crash reporting does not exist while the UI says it does (J04-04, J16-02). Founder has no crash visibility except App Store Connect/Xcode Organizer (aggregate, only for users who share diagnostics), and no OTA channel (expo-updates is not installed), so any crash fix needs an App Review cycle.
Fix: Decide: scrubbed crash reporter under the consent switch (LEGAL-REQ-017 scrubber) or fix the copy; consider expo-updates for JS hotfixes with counsel sign-off.

MAJOR Network and privacy: from code reading, v1.0 native makes these calls only: model/pack downloads (huggingface.co, planned models.earlyletters.com), StoreKit (Apple), PostHog after consent. Remote config/manifests do not fetch (docsBase is null with server features off, remote/index.ts). The google.com requests seen in the web build are not from app code: the exported web bundle contains no fetch to google.com (only a developers.google.com link in a library console warning), no Google Fonts (fonts are embedded) and GoogleSignin loads lazily only for sign-in, which is off. They most likely come from Chromium itself or the test harness; this was not captured, so it must be confirmed on a real iPhone with the iOS App Privacy Report or a proxy. A model download reveals IP and chosen language to a third-party host (disclosed in the subprocessor list per D-065); hosting is a single point of failure with `mirrors: []`.
Fix: Run a proxy/App Privacy Report session on device, add a mirror host, and add a CI test that app code only contains an allowlist of hosts.

MAJOR Security at rest: Data Protection is set to complete-until-first-auth (app.config.ts), but the SQLite database and recordings are not separately encrypted (LEGAL-REQ-022(d), accepted) and are included in iCloud backups; deleted letters stay on disk (J10-06). Logs: no content found in the code paths read; the log canary exists for the server and not for the app.
Fix: Add a client-side log canary test (Asha fixtures through the e2e run) and state the backup behaviour in the policy.

MAJOR Store-review risks: (1) Family tab and "coming soon" rows (J17-01); (2) Sign in with Apple entitlement and associated domains with no sign-in in the build, Google Sign-In/passkey SDKs linked; (3) privacy manifest lists no collected data while PostHog is linked (lazy and consent-gated, so likely fine, verify with Apple upload warnings); (4) the manifest comment says "App code does not query free space today" but export/device.ts:209 and packs/expo-adapter.ts:167 do (the DiskSpace reason is declared, so only the comment is stale); (5) microphone string comes from permission-copy.ts and is marked counsel review pending; (6) no CI lint of Info.plist/entitlements (LEGAL-REQ-007 test).
Fix: Add an entitlement/Info.plist lint to CI, resolve each item in the review notes, run the first TestFlight upload early.

MAJOR Localisation: seven spoken languages exist, but the app UI is English only (strings.en.ts is the single catalogue; no other string file). Text expansion, RTL for Arabic spoken letters and non-Latin names in the layout (Book title, dateline, printed PDF) are untested. The PDF locale/paper handling exists (paperFor) but no fixture for ar/hi/zh.
Fix: Decide the v1.0 position (English UI, seven spoken languages) in store copy; add Arabic/Hindi/Chinese letter fixtures to export-golden and a layout check at AX5.

MINOR Traceability: only about 30 distinct requirement ids appear in test titles (grep of apps/mobile test and src); no TRACE.md exists; screens (React components) have no component tests at all, only pure-logic tests, the Playwright web flows (not in ci.yml) and Maestro flows that have never run. Screens with no automated coverage beyond the web flow: Listening, Review editing, Letter delete/restore on device, Read together audio, Export on device, Reminders delivery.
Fix: Add scripts/trace.mjs coverage for P0 ids, run e2e-web in CI, and tag tests with ids.

MINOR Time and clock: dates use the device clock and local time zone (todayISO, occurredOn from the draft createdAt). A wrong device date puts letters in the wrong chapter and "Before you"; there is no warning and no edit of a letter date. Reminder scheduling handles zone and DST (tz.ts, tests). The age gate handles a backward clock.
Fix: Allow editing a letter date and warn on dates before birth. Test: letter date edit moves chapters.

MINOR Not observable on web and still unverified on any device: mic permission alert, phone call/Siri interruption, backgrounding during recording, low storage, jetsam during transcription on a 4 GB phone (turbo model about 1 GB resident, estimated), airplane mode during model download, iCloud restore on a new phone, VoiceOver, Dynamic Type, haptics, Alert dialogs (Let it go, Hide book), pickers and the future-date limits.
Fix: Cover each in the S1 device session with an evidence row.

FIRST-RUN · J00-OPEN · STEP 1 OF 147

The first thing anyone sees: one plain question

happy path

The same question for everyone (A-REQ-030).

Product lead [fix]

MINOR The very first screen is a bare legal question on an empty cream page: no name, no mark, no reason. A parent opening a warm baby book app meets a gate before any warmth. 'We ask everyone the same question' explains nothing. (D-043 recommends welcome screen first, then gate; D-006 requires the gate before first run. The order here is gate first.)
Fix: Keep the gate first if D-006 requires it, but add the brand mark above the question and one warm line of why: 'Early Letters is for adults. Are you 18 or older?' Founder to confirm order vs D-043.

Design lead [fix]

MINOR The age gate is the first screen anyone sees and it is bare paper: no mark, no opening-quote pair, no lamp warmth. The website opens with atmosphere; the app opens with a form. Yes/No pills also sit in the top third (y 176-224), the hardest zone for one thumb, while Continue is at the bottom.
Fix: Add the primary mark from the brand registry above the heading (logo.mark at its registry minSize, space[8] above). Stack Yes/No as a full-width ChoiceGroup layout=list (56 pt rows, space[2] gap) placed in the lower half, or keep side by side but start the block at ~40% height.

Quality engineer [ok]

No findings

Start

FIRST-RUN · J01-01 · STEP 2 OF 147

The age question

happy path

The first screen is one neutral question, with nothing preselected. Continue stays off until the person picks Yes or No.

Product lead [fix]

> **MINOR** Same as J00-open: cold first impression, no brand mark, large empty page below the two buttons; Continue is disabled with no hint that a choice is needed (the greyed button is low contrast).
> Fix: Add the mark and the one-line reason; make the disabled Continue visibly disabled rather than nearly invisible.

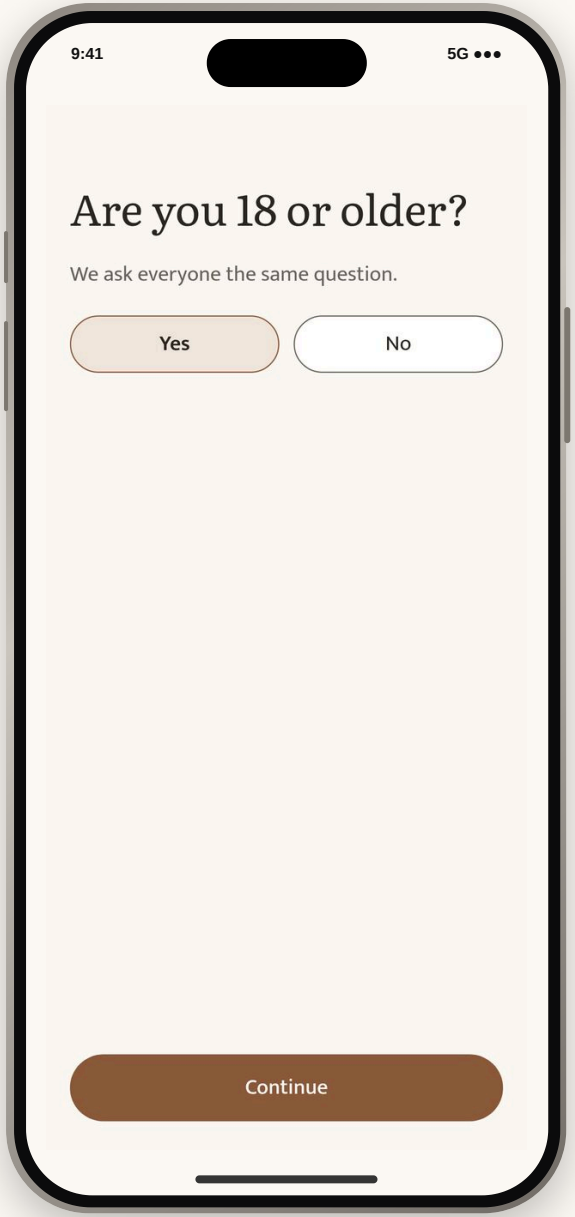

Design lead [fix]

> **MINOR** Same screen as J00-open: top-third Yes/No and no brand presence on the first screen.
> Fix: See J00-open: registry mark plus thumb-zone ChoiceGroup.

Quality engineer [ok]

No findings

From J00-open

Yes is chosen

happy path

The person taps Yes. Continue turns on. Only a yes/no flag is stored on the phone, never an age.

Product lead [ok]

No findings

Design lead [fix]

> **MINOR** Selected Yes is shown only by an accentSoft fill (1.1:1 against white) and a bolder label, with no check icon. Birthday/Not here yet chips on the next screen do show a check, so selection reads differently within the same flow, and colour is the main cue.
> Fix: Use one selection pattern: ChoiceGroup selected = accentSoft fill + 1.5 pt accent edge + leading check icon (as the Chip spec).
> Enabled Continue (accent, 56 pt) is clear and good.

Quality engineer [ok]

No findings

Welcome

happy path

The envelope, the name, one line of what the book is, and one quiet line: "Your first two letters are free." (D-082). One button: begin. (v1.0 has no "I was invited": no invite can exist without a server, so the door is hidden until co-parent sharing ships.)

Product lead [fix]

MAJOR 'I was invited' leads to a coming-soon page in v1.0 (J17-04). A person who taps it, probably a grandparent or co-parent who was sent a link, hits a dead end on the second screen. Offering a door that cannot open is a broken promise.
Fix: Hide 'I was invited' until invites work. If invite links can arrive in v1.0, show a dedicated, correct page: 'Your invitation is saved. Sharing opens in a later update. You can start your own book now.'

MINOR The illustration is the line-drawn envelope. D-071 retires the 'envelope line' brand motif and the wordmark/mark is not shown, so the first branded screen does not carry the chosen mark. I did not check the code to confirm the asset is the retired one; it looks like it.
Fix: Replace with the primary mark per the brand registry (D-072), or confirm this drawing is an approved illustration.

MINOR The welcome sets no expectation about membership. Under D-051 only the first 2 letters are free, so a parent who loves night one meets a paywall at letter three with no earlier hint.
Fix: Add a quiet line on Welcome or the promise screen: 'Your first two letters are free.' Wording needs founder and legal sign-off.

Design lead [fix]

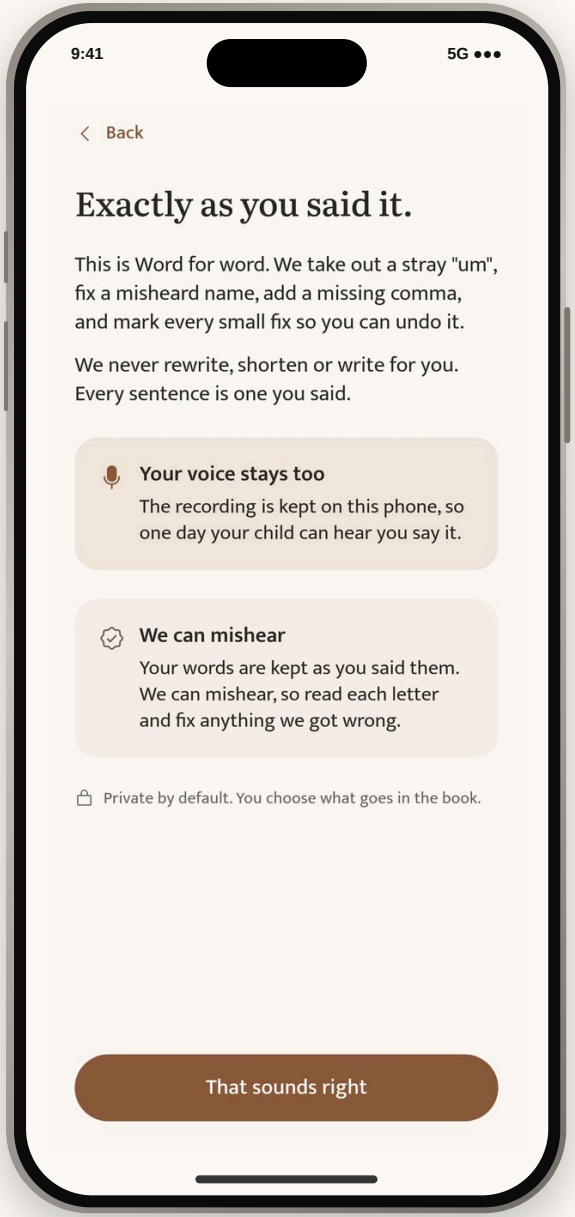

MAJOR The welcome screen is the brand's one chance to feel like the website (warm paper, lamp-light, literary), but it is flat: the name is plain Literata text instead of the outlined wordmark/primary mark, the opening-quote pair is absent, and there is no light or grain. The envelope line art is a different metaphor from the quote-pair mark.
Fix: Use the registry lockup (assetFor welcome context) instead of text; add a static paper grain + a LampLight-style pool (atmosphere.lamp #F3C98B at <=12% opacity on paper, aspect 0.7) behind the art; keep motion to tokens.motion.gentle and off under Reduce Motion. Replace or pair the envelope with the quote pair.

MINOR Line art starts about 16 pt right of the text edge (art x=50 vs text x=30 in the capture), so the illustration looks mis-aligned with the heading and body.
Fix: Offset LineArt by its internal padding (negative marginStart) so the drawing's visible edge sits on the gutter, or centre the art.

MINOR 'I was invited' is a plain accent text link (about 16 pt text) under a 56 pt primary; the visual height looks under 44 pt.
Fix: Give quiet buttons min-height 44 pt plus hitSlop; keep accent #8A5A3B (5.5:1).

Quality engineer [ok]

No findings

The promise

happy path

What the app does with words (tidies, never rewrites), that the voice is kept on the phone, that it can mishear, and that it is private by default.

Product lead [fix]

MAJOR The promise screen ('We tidy what the microphone got wrong') uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

MINOR 'The recording is kept on this phone' is incomplete against D-033, whose agreed copy is 'on this phone and in your iPhone's own backup, if you use one'. The Recordings screen (J14-01) says it correctly, so the two screens disagree.
Fix: Use the same sentence as Recordings: 'The recording is kept on this phone, and in your iPhone's own backup if you use one, so one day your child can hear you say it.'

MINOR The button 'That sounds right' asks the parent to agree with a claim rather than move on, and a tired person may not know what they are agreeing to. Three blocks of reading precede the first real task.
Fix: Use 'Continue' or 'Next'. Keep the three blocks but trim the first paragraph to one sentence.

Design lead [fix]

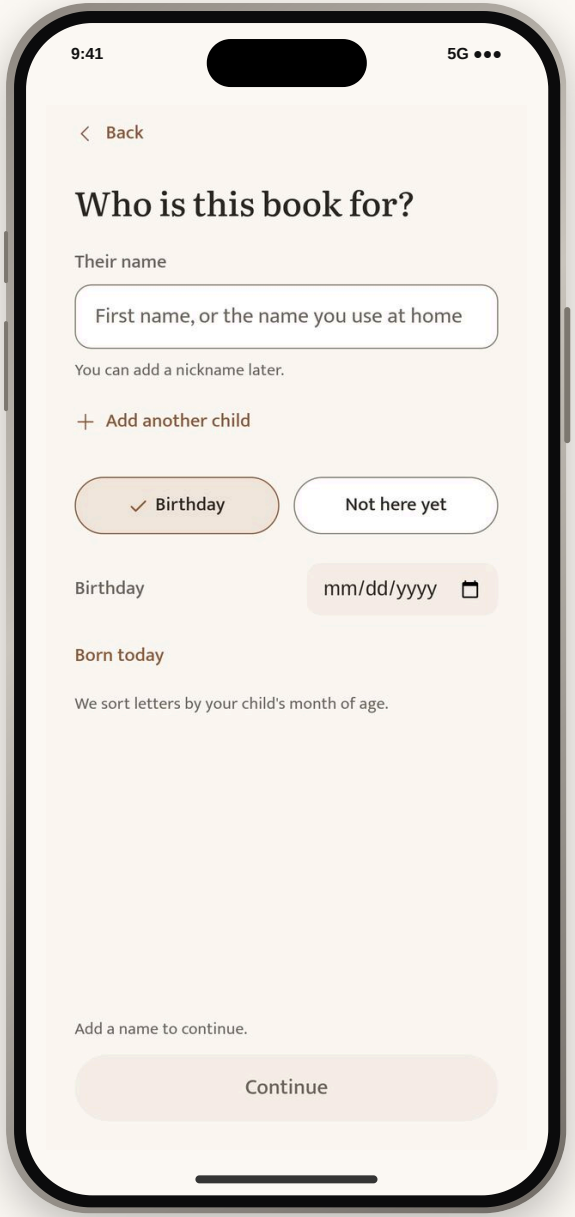

MINOR Two promise cards use two different fills (accentSoft vs surface) with no meaning, and the 'We can mishear' card uses a seal-with-check icon, which reads as 'verified' on a caution message.
Fix: Same fill for both (surface + 1 pt line) and a neutral icon (ear or pencil) for the mishear card; reserve accentSoft for selection and the highlighted state.

MINOR The strongest trust line ('Private by default. You choose what goes in the book.') is demoted to a 13 pt footnote with a lock, while the two weaker points get cards.
Fix: Make it the third card, or raise it to subhead 16 pt; all three points are equal promises.

MINOR Back here is a '< Back' text button; Settings and Letter use a bare arrow; Review uses 'Close'. Four navigation idioms.
Fix: One ScreenHeader (see _journey).

Quality engineer [gap]

MINOR The promise says "read each letter and fix anything we got wrong", but after Save there is no way to edit a letter (letter/[id].tsx has no edit action; only Review has "Change words"). From code reading, not observed on a phone. The promise is only half keepable.
Fix: Either add "Change words" on the letter page (stored as a person edit, raw untouched) or soften the line. Test: [A-REQ] letter edit keeps raw_transcript and records an edit row.

Child step with no name

unhappy path

Nothing typed yet. Continue is off and a line above it says why: "Add a name to continue." An empty name can never be saved.

Product lead [fix]

MAJOR The birthday silently defaults to today. A parent of a 7-month-old who types a name and taps Continue gets a baby aged '0 days': the Tonight prompts, month chapters and every dateline are then wrong. The date pill looks like a label, not a field to check.
Fix: Do not default. Show 'Choose a date' until picked, or default and ask 'Is Asha newborn today?' Keep Continue disabled until a date is chosen.

MINOR Continue is disabled with no explanation. For one field this is tolerable, but a person with a screen reader or in poor light does not learn what is missing.
Fix: Keep the disabled state and add helper text on focus loss: 'Add a name to continue.'

Design lead [fix]

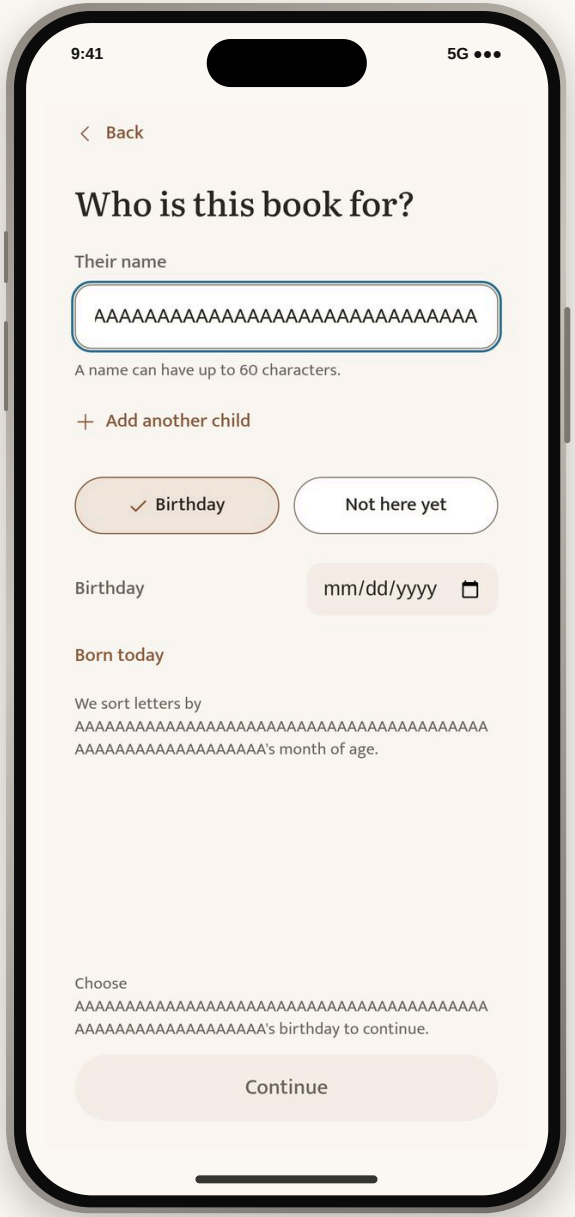

MINOR 'Add another child' sits between the name field and the birthday control, interrupting the main path (name, date) for the minority case (twins).
Fix: Move it below the date block, or to a quiet row above Continue; keep a 44 pt target.

MINOR The date pill reads 'Sunday, October 4, 2026'. In es/fr/pt the long weekday + month form ('domingo, 4 de octubre de 2026') will wrap or truncate inside a pill, and 'Birthday' is repeated three times (chip, row label, helper).
Fix: Show date only (d MMM y), let the pill wrap with min-height 44, drop the duplicate row label.

MINOR Disabled Continue is the only signal that a name is required (no message, by design). Visually fine, but confirm accessibilityState.disabled and a hint ('Enter a name') for VoiceOver. Native keyboard avoidance cannot be judged from the web render.
Fix: Add hint text via accessibilityHint; QA on device with keyboard open.

Quality engineer [gap]

MINOR Continue is disabled with no reason given (onboarding.tsx:~199 `disabled`; TextField supports an `error` prop but none is passed). A VoiceOver user hears "dimmed" and nothing else. If a second child field is added and left blank, Continue stays off with no explanation until the blank field is removed.
Fix: Pass a visible, announced helper ("Add a name to continue") when the person taps the disabled area or leaves a blank field. Test: component test on the child step with blank first and second names; VoiceOver script step.

A very long name stops at 60 characters, and says so

unhappy path

The person pastes 90 letters. The field keeps the first 60 and a quiet line explains the limit, so nothing is cut without a word. The limit is the same one the book and the server use.

Product lead [ok]

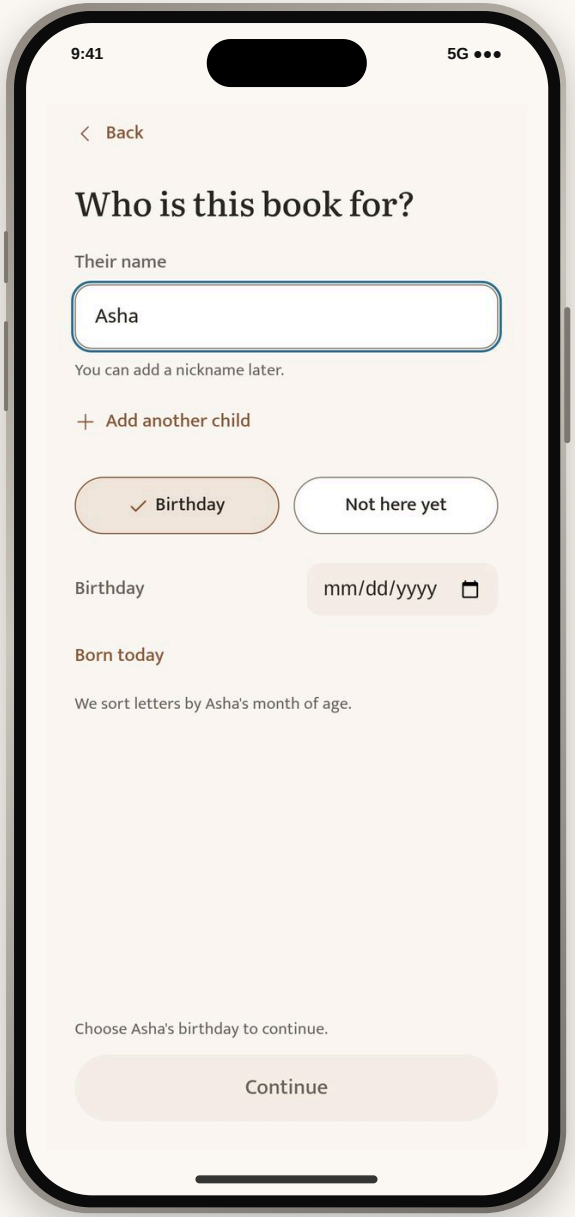

No findings

Design lead [fix]

MINOR A 90-character paste is silently cut at 60 with no counter or cue, and the helper line renders the whole 60-character unbroken string ('We sort letters by AAAA...'s month of age.') over three lines, pushing the layout.
Fix: Show a quiet counter at 50+ characters, and in the helper use numberOfLines=1 with ellipsizeMode=tail (a render truncation, not copy) or fall back to 'your child' beyond 24 characters.

Quality engineer [gap]

MINOR The 60 limit is `v.slice(0, 60)` on UTF-16 code units (onboarding.tsx:114). A paste that ends in an emoji or a multi-code-point name can be cut mid-character and store a lone surrogate. Silent: no counter, no message. The 30-character signature has the same slice. Long names in the Book title, Review dateline and printed book at AX5 not observed.
Fix: Truncate by code point/grapheme (Array.from) and NFC-normalise. Unit tests with emoji, ZWJ sequences, Devanagari conjuncts and 90 letters; check the Book title at AX5 on device.

Name entered, no birthday chosen yet

unhappy path

The birthday is not filled in for the person: the date row is empty (on a phone it says "Choose a date") and Continue waits, with a line saying what is needed. A seven-month-old can no longer be saved as "0 days" by an unseen default. "Born today" is one tap for a newborn.

Product lead [ok]

No findings

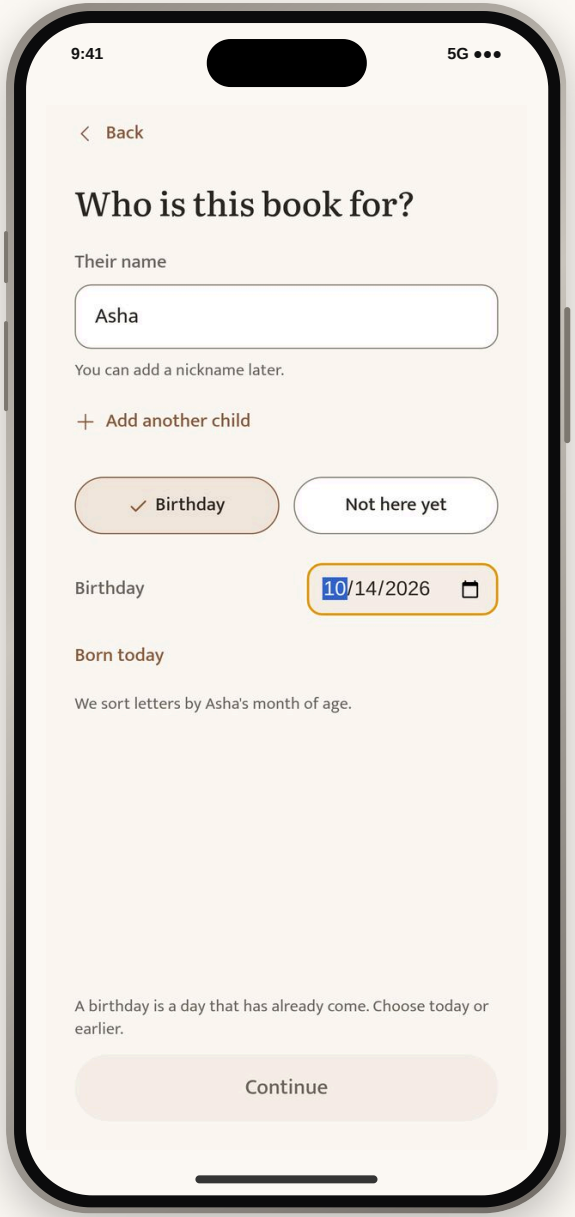

Design lead [ok]

No findings

Quality engineer [fix]

MAJOR The birthday silently defaults to today (onboarding.tsx:79). A parent of a 7-month-old who does not touch the picker saves birthday = today: every letter is placed in "Asha, 0 days / first weeks", prompts are chosen for a newborn, and exports carry the wrong age. There is no confirmation and, see J03-07, no screen to correct it afterwards. Fix: Start with no date selected and require an explicit choice, or show "Born today?" confirmation when the date equals today. Test: onboarding cannot finish with the untouched default; E2E-02 variant.

From J01-05

A birthday in the future

unhappy path

On the web the date can be typed; a day after today is refused in words (on a phone the picker simply does not offer it).

Product lead [ok]

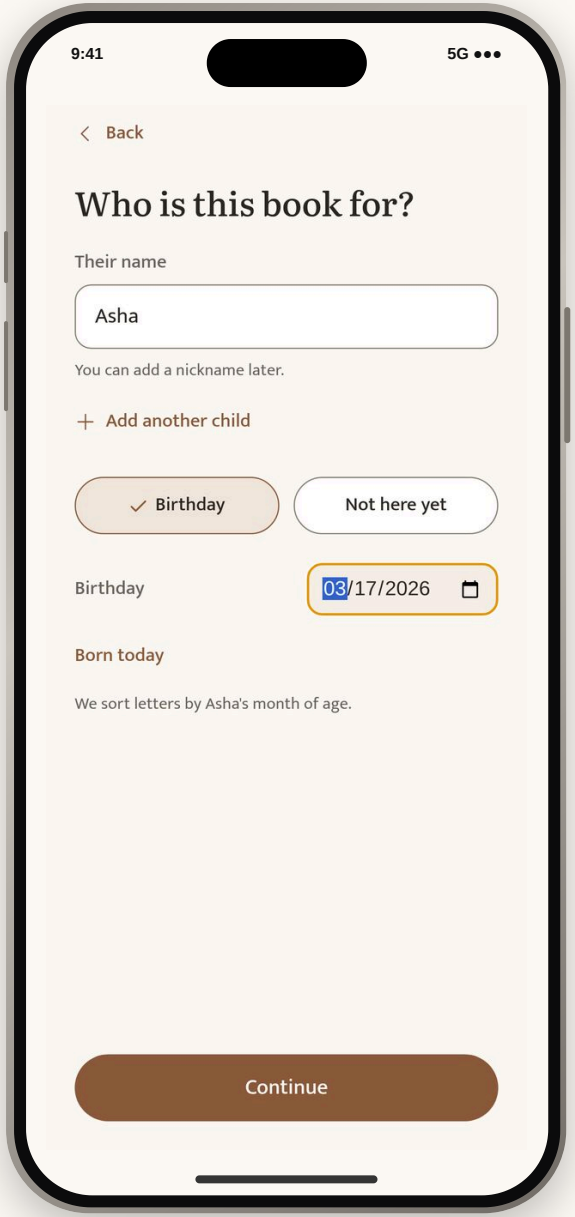

No findings

Design lead [ok]

No findings

Quality engineer [fix]

MAJOR Expecting parents: due date is stored with birthday = null. There is no UI that ever converts a due date to a birthday (updateChild is only called for the reminders switch: children/[id].tsx:~61; rows at :51-53 have no onPress). monthFor() returns null without a birthday, so after the baby arrives every letter stays under "Before you" and the Book never gets month chapters. The picker also blocks past due dates, so an overdue baby forces "Birthday". The 305-day limit and future-birthday block could not be observed on web (native picker).
Fix: Add an edit screen for name, birthday/due date, signature, and prompt "Has the baby arrived?" after the due date.
Tests: due date passed then set birthday re-chapters existing letters; picker max/min on device.

An older baby: the birthday is chosen

happy path

The person picks the real birthday (about seven months ago). Continue turns on. Letters will be filed by the baby's true age.

Product lead [fix]

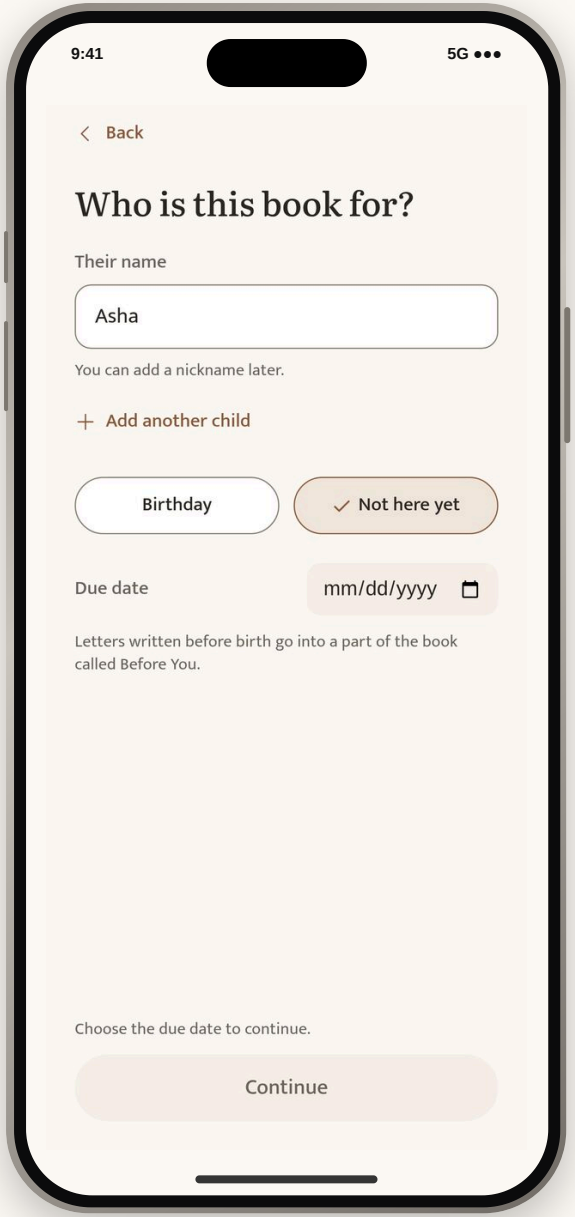

> **MINOR** 'Twins or more?' with one shared birthday is wrong for siblings of different ages (D-038 allows first-run siblings with different dates). A parent with a toddler and a newborn would set one child's date wrong. Also D-051 open edge 2 and 6 leave undecided what extra books get for free, so the free promise in this screen's note ('Every book made in first run is free') cannot be shown yet.
> Fix: Per-child birthday rows, or 'Same birthday' as an explicit switch. Do not state any free promise for extra books until the founder closes D-051 open edges 2 and 6.

Design lead [fix]

> **MINOR** The remove X sits inside the second field at roughly 16 pt glyph size; the DOM cannot prove a 44 pt hit area. Continue stays disabled with an empty second field and no reason shown.
> Fix: IconButton size=sm with hitSlop to 44 and label 'Remove second name'; add helper 'Fill in or remove this name' when blocked.

Quality engineer [gap]

> **MINOR** Identical names ("Asha", "asha") are accepted for twins and later add-child; the switcher and Review header then cannot tell the books apart. Up to 6 fields; a blank extra field disables Continue (see J01-05).
> Fix: Warn on case-insensitive duplicates within a first run and on add-child. Unit test on the name list.

Not born yet: due date not chosen

unhappy path

Choosing "Not here yet" turns the date into a due date, which is not filled in either. Continue waits and says why.

Product lead [ok]

No findings

Design lead [fix]

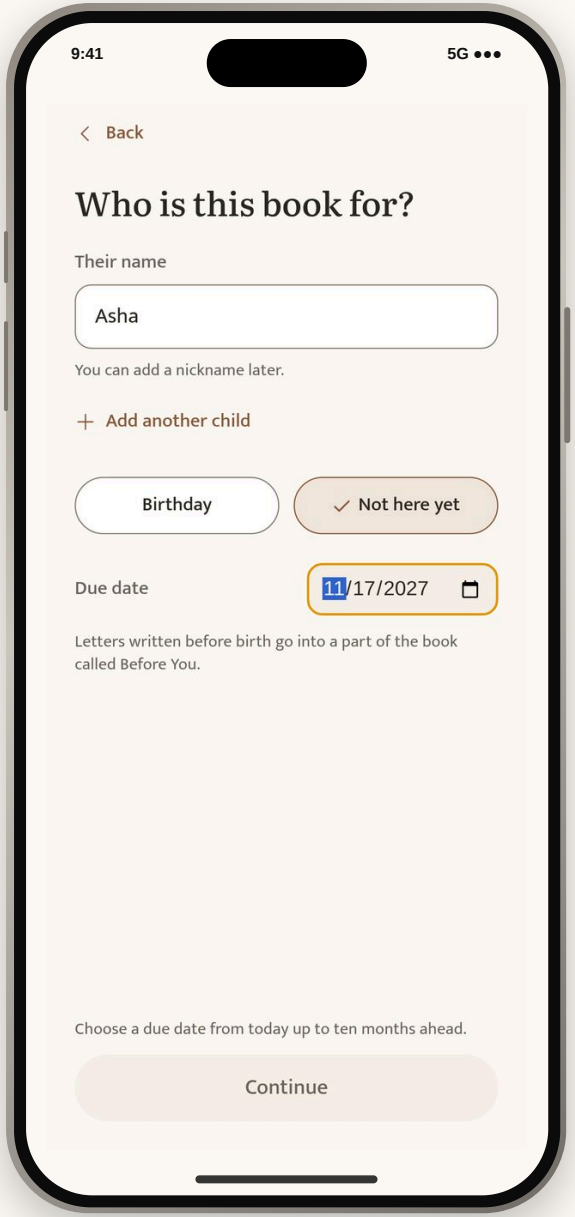

MAJOR The 'Spoken language' row is a white card on paper (1.06:1, no border) with a value and no chevron: it does not read as a control, yet it is the choice that triggers a 575 MB model download. Settings rows elsewhere do carry chevrons.
Fix: Render with ListRow trailing chevron + `line` hairline; add 'Download starts on Wi-Fi' as the row subtitle.

MINOR 'Not talking yet? Pick the name you hope to hear.' floats about 60 pt under the chips, detached from the field it explains, at 13 pt.
Fix: Place it directly under the field as helper (subhead 16 pt).

MINOR The chip suggestions (Mama, Papa, Amma, Appa, Mummy, Daddy, Ma, Baba) and the placeholder are English/Hindi-centred; nothing here shows what es/fr/pt/zh/ar users get.
Fix: Localise suggestion sets per UI language (Mama/Papa, Maman, Mamae, 妈妈/爸爸, ماما/بابا) in packages/content.

Quality engineer [gap]

MINOR Signature capped silently at 30 characters (onboarding.tsx slice(0,30)); it is stamped onto every letter at save time (authorSignsAs) and cannot be changed later (no edit UI, J03-07), so a typo is permanent on all future letters.
Fix: Edit screen for signature (affects new letters only, old letters keep theirs by design); show the cap. Test: rename does not rewrite old letters.

A due date too far ahead

unhappy path

A due date can be at most 305 days away, the same range the phone picker offers.

Product lead [ok]

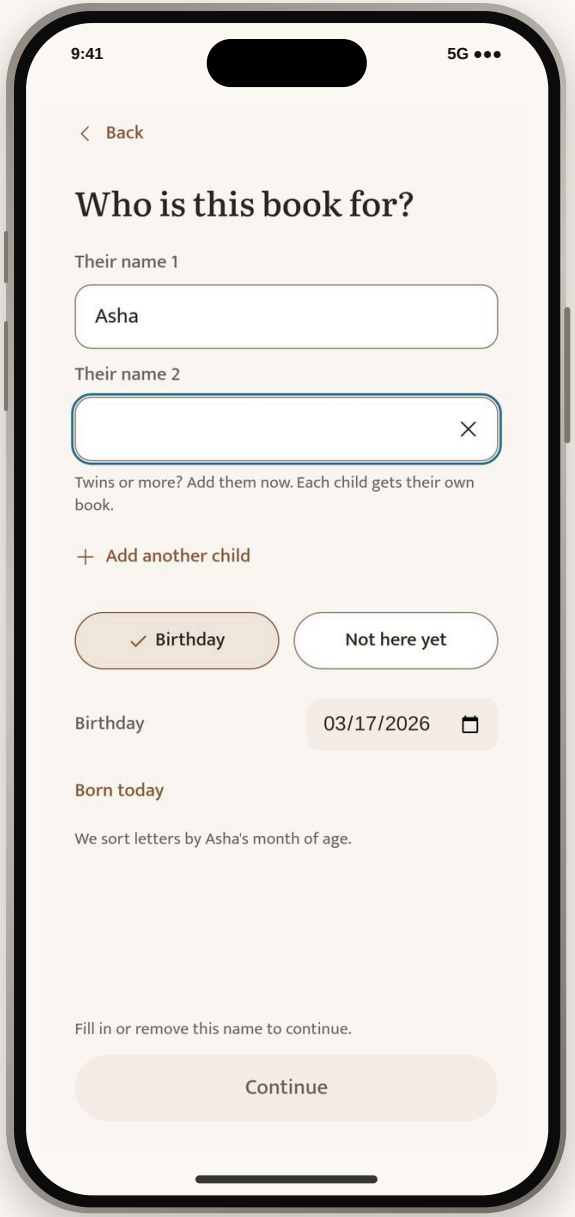

No findings

Design lead [ok]

No findings

Quality engineer [ok]

No findings

A second name left empty

unhappy path

Twins or more: an empty second field keeps Continue off, and the line says to fill it in or remove it.

Product lead [fix]

MAJOR Choosing a language 'starts that language's downloads' with no size, Wi-Fi or storage disclosure. The Recordings screen (J14-01) shows the English model as 'Not on this phone, 575 MB'. A parent on mobile data at night may start a very large download without knowing, or may never find out that speaking needs it. I could not verify on a device whether English ships inside the app (D-065 says the English pack ships; J14-01 says it is not on the phone).
Fix: Show a size line and a Wi-Fi note in the sheet ('English is about 575 MB. We will download it on Wi-Fi.'), and a download state on Tonight. Confirm with mobile whether English is bundled.

Design lead [fix]

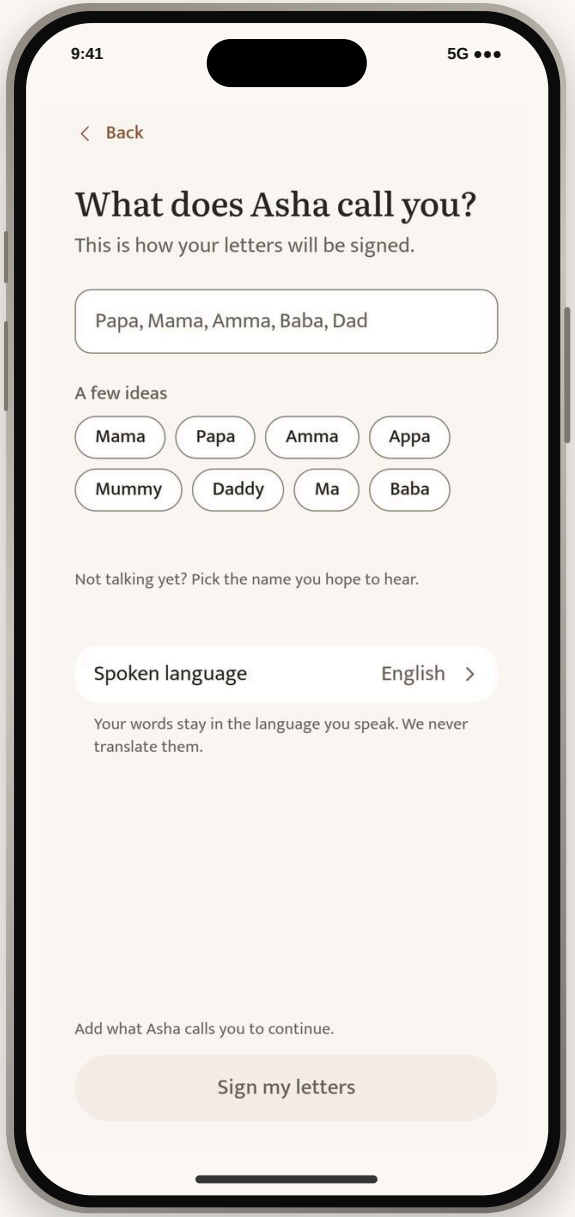

MAJOR This language picker uses a different sheet pattern from every other sheet: Mukta semibold 17 pt title and a text 'Close', no grabber, no circular X, while Whose book, Reading size and Help us make it better use a serif 22 pt title, grabber and X. Search field radius (about 24) also differs from the name field (14).
Fix: Build it on the shared Sheet component (title, description, hideClose=false) and use radius.md for all fields.

MAJOR Choosing a language silently starts a download (575 MB per Recordings) with no size, Wi-Fi or consent cue in the sheet.
Fix: Add the size and 'Downloads on Wi-Fi' under each non-installed language; show progress on the row afterwards.

MINOR The Arabic row is right-aligned (and its English sublabel too) inside an LTR list, so the row alignment is inconsistent; not verifiable under a real RTL locale.
Fix: Align all rows to start; set writingDirection per text node only; QA the whole app under ar with forced RTL.

Quality engineer [gap]

MINOR Choosing a language in the sheet starts only the text-rules pack (onboarding.tsx chooseLanguage). The 575 MB speech model is not announced or prefetched here, and with the default language no event fires, so the person first learns of the download in Review (J05-03). Which host serves the model matters: the English/multilingual model URL is huggingface.co with no mirror (catalog.ts:115 `mirrors: []`). Hindi and Chinese use the shared multilingual model until the self-hosted files exist; their accuracy is unmeasured here.
Fix: Offer "Get speech ready on Wi-Fi" after first run (one tap, resumable) and add a mirror. Test: pack engine resume and mirror failover (exists in packs tests; add a catalog host-reachability check in nightly CI).

What does Asha call you?

happy path

The name the child will call this parent, which signs every letter. Sign my letters is off until something is chosen or typed.

Product lead [fix]

MINOR The only action is 'Write the first one', but the product is 'fill by talking', and the button lands on Tonight (J01-14), not on the recorder. The first letter needs a further tap on Speak.
Fix: Label 'Tell Asha something' (or 'Begin the first letter') and open Tonight with Speak ready, or go straight to the recorder.

Design lead [fix]

MAJOR 'The book is open.' is set far larger than anything else (about 40+ pt by measurement against Tonight's 34 pt greeting; verify in code) and wraps with an orphaned 'open.'; the type ramp (display 34/41) is broken on the one celebratory screen, and with two long names or es/pt text it will wrap to three lines.
Fix: Use tokens.type.display (34/41) with balanced wrapping; keep the body at body 18/24.

MINOR About 270 pt of empty space above the art, and the art sits 16 pt inside the text edge. This is the first-run finale and carries no brand moment.
Fix: Centre the group optically, use the opening-quote pair or a lamp pool as the one moment of warmth, honour Reduce Motion.

Quality engineer [fix]

MAJOR finish() (onboarding.tsx:118) has no in-flight guard. A double tap before router.replace completes calls addChild twice per name: duplicate books with the same name, and no way to delete a book (only "Hide"). Any throw from the synchronous SQLite call (disk full, I/O error) is uncaught in an event handler, which is fatal in a release build (no error boundary).
Fix: Guard with a ref, wrap in try/catch with a calm retry card, make creation idempotent per first run. Tests: double-invoke finish creates one book per name; failing addChild shows the card.

Signature chosen

happy path

Tapping a suggestion fills the field and previews the signature in script.

Product lead [ok]

No findings

Design lead [fix]

MAJOR Tonight has no way to reach Settings or switch child: the gear and the child switcher exist only on the Book tab (J03-04). For a daily-use home screen, and for twins whose dateline shows only one name, this hides core controls.
Fix: Add the same header cluster (switcher + gear as 44 pt IconButtons) on Tonight, or make the dateline a tappable switcher with a chevron.

MINOR 'Not much today' is a bare accent text link about 30 pt tall under two 72 pt pills; the quiet-day path is easy to mis-tap and hard to see as tappable.
Fix: Button variant=quiet, min-height 44, keep accent; do not add a count or colour.

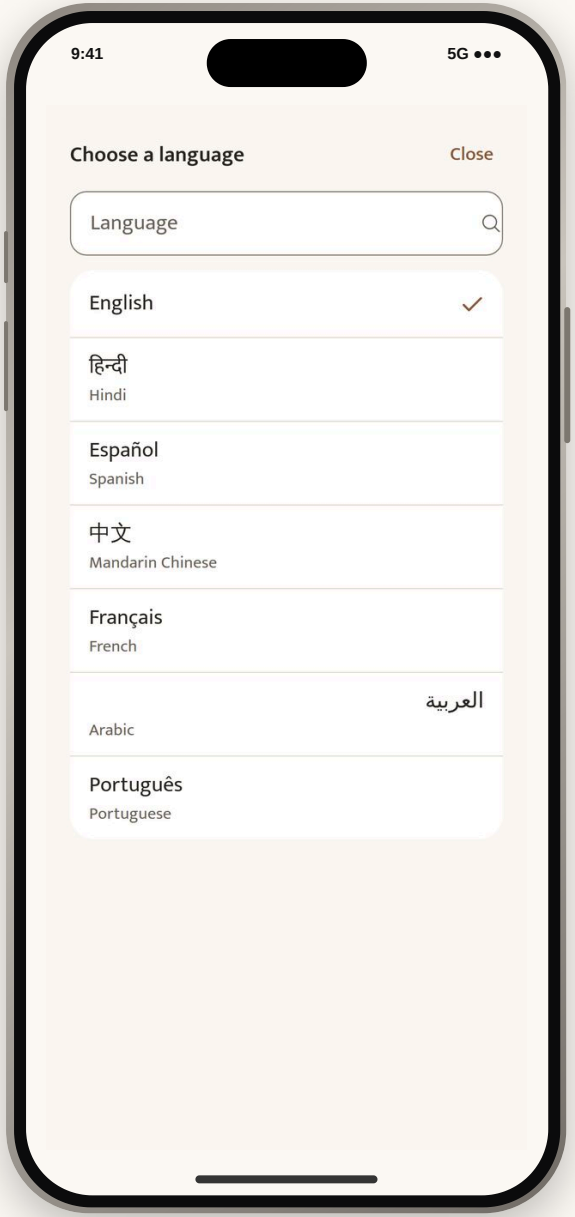

MINOR The Tonight tab icon is a crescent with a small star, which reads as a sparkle; the brand system bans sparkles near the mark.
Fix: Swap for a plain crescent (Phosphor Moon) in the tab bar.

MINOR The home screen is flat paper. 'Good evening' is the natural place for the website's lamp-light, and no atmosphere tokens (lamp, lampGold) are used anywhere in the app.
Fix: A static LampLight pool at <=10% behind the prompt card in light, <=16% in dark (atmosphere.lamp); no continuous loop (MOTION principle 1).

MINOR Dateline 'Asha - 0 days' reads like a counter on day zero.
Fix: Use 'Asha - newborn' for 0 to 6 days (content decision; keep numbers from week 1).

Quality engineer [gap]

MINOR Tonight reads the whole book (`listEntries()` = SELECT * plus JSON parse of every row) on every focus and store change (index.tsx:~58) just to get recent prompt keys and days since the last letter. Fine with 1 letter, unmeasured at 1,800 letters (5 years); no perf test.
Fix: Query only prompt_key (last N) and max(occurred_on). Add a 2,000-letter fixture to the perf harness with a focus-to-render budget.

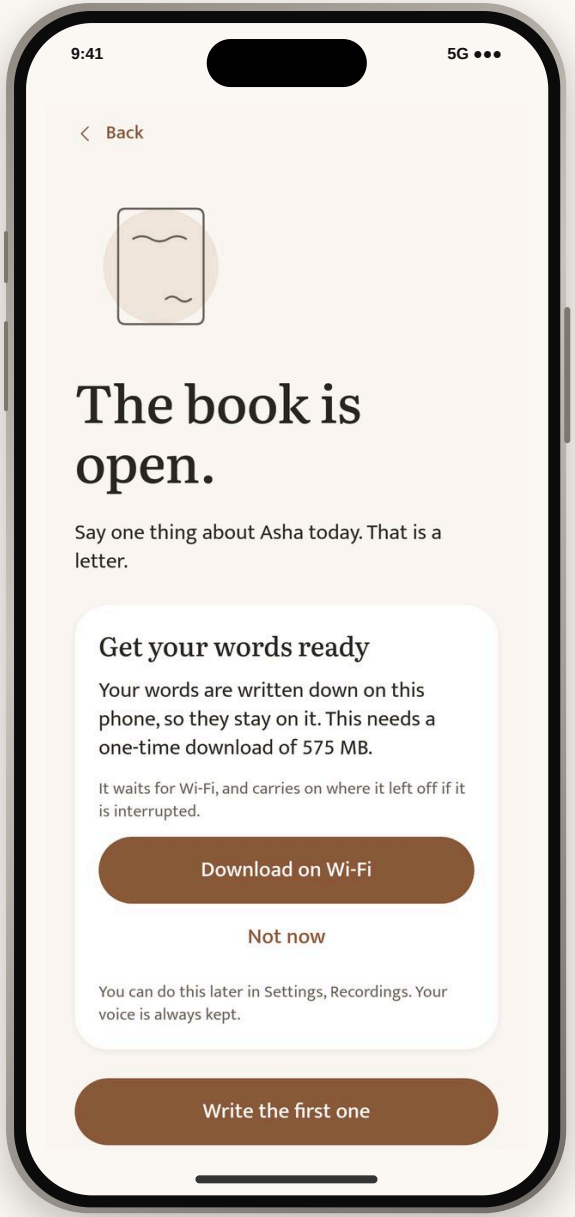

Choose the spoken language

happy path

A sheet lists the languages letters can be spoken in. Choosing one only stores it: nothing downloads until the person taps at the end of first run.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J01-14

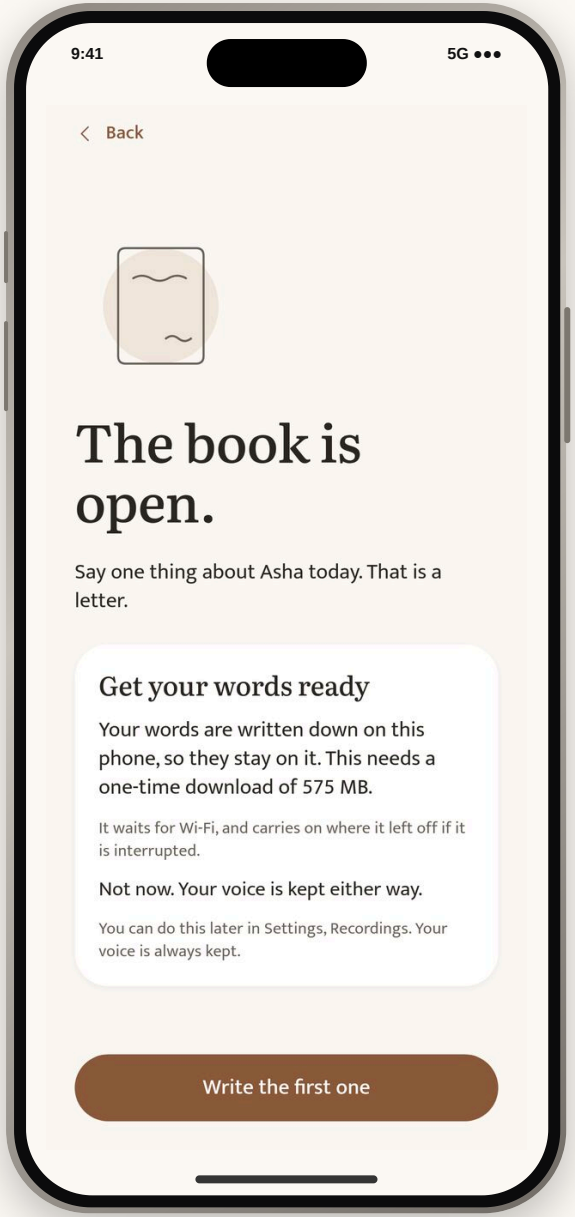

The book is open, and one ask about the speech download

happy path

A page with one line, then one card: "Get your words ready", the real size for this phone, that it waits for Wi-Fi and resumes, and two buttons: Download on Wi-Fi or Not now. Nothing downloads until the person taps. The first letter can always be written either way (the voice is always kept). The download itself is native and cannot run on web; on a phone this needs a real iPhone check.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J01-15

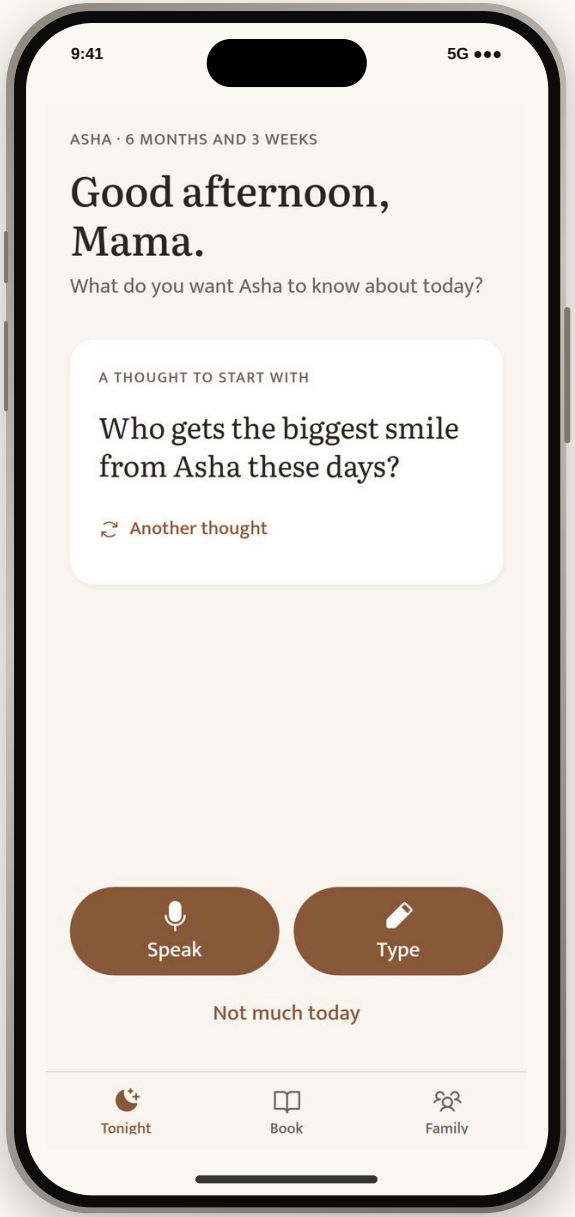

Not now is a calm answer

happy path

The card says it is fine and nothing else changes. The first Review will offer the same button if words are waiting.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

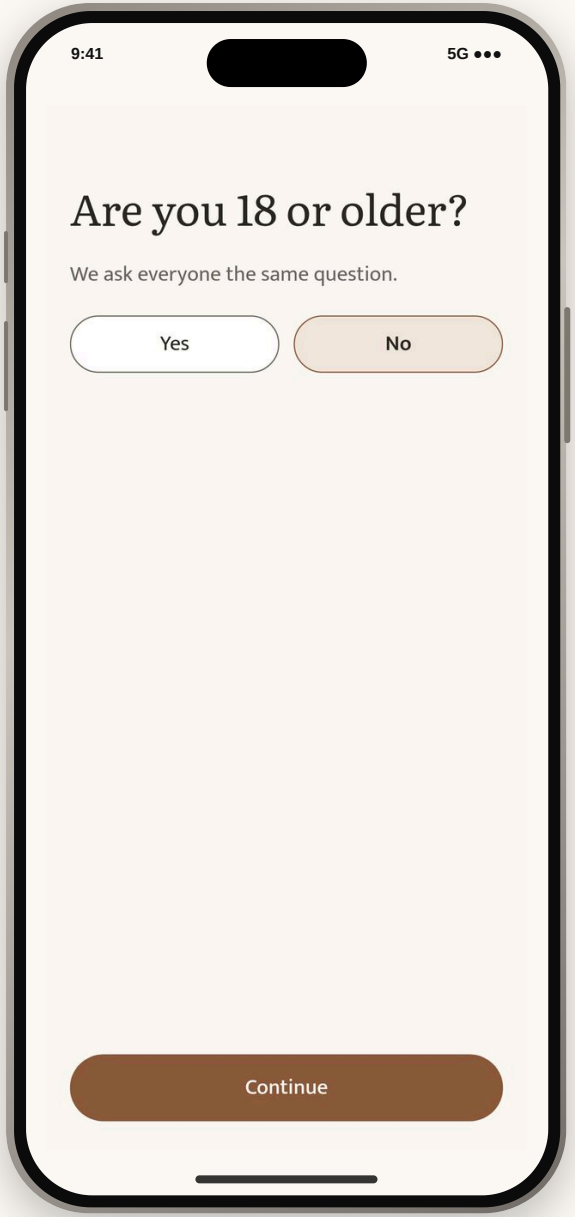

Tonight, for the first time

happy path

The home tab: a greeting with the signature name, one gentle prompt, Speak and Type side by side, and "Not much today" for quiet days.

Product lead	Design lead	Quality engineer

From J01-17

No is chosen

unhappy path

The person says they are under 18. Nothing else is asked.

Product lead [ok]

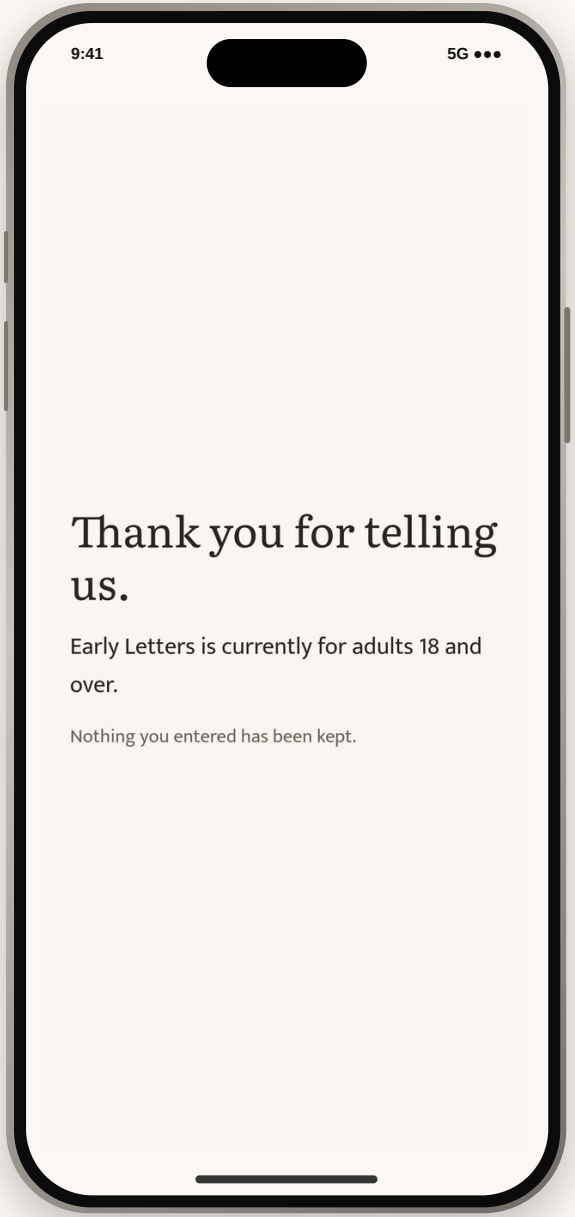

No findings

Design lead [ok]

No findings

Quality engineer [ok]

No findings

The stop screen

unhappy path

A calm explanation with no way to continue or go back. No child, letter or recording exists, only the time of the No is stored.

Product lead [fix]

> **MINOR** A mis-tap on 'No' (easy with one hand) locks the person out for 24 hours with no hint that a way back exists. Calm tone is good ('Nothing you entered has been kept').
> Fix: Add: 'If you tapped No by mistake, you can answer again tomorrow.' (D-006 requires the 24h stop; the copy can still say so.)

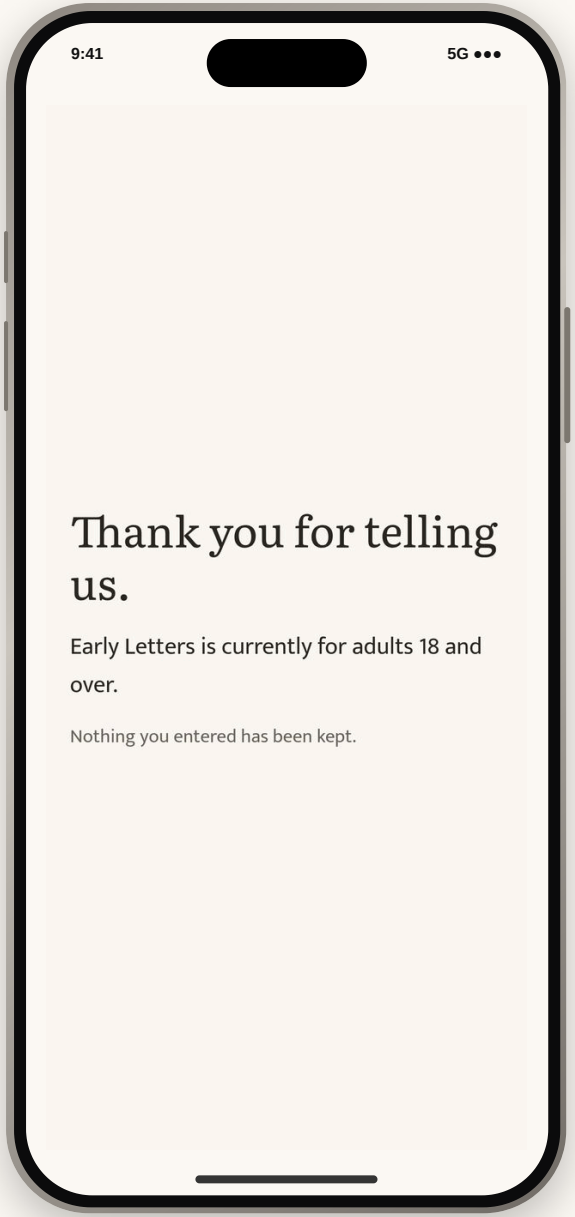

Design lead [fix]

> **MINOR** The stop screen is vertically centred while the question it follows is top-anchored, so the page jumps; the heading orphans 'us.' and the body leading is about 32 pt on 18 pt text (loose against body 18/24). There is no mark or art, so a courteous screen looks like an error.
> Fix: Anchor at the same top position as the age gate, balanced heading, body lineHeight 24, add the mark above the heading.

Quality engineer [gap]

> **MINOR** The under-18 stop is stored only in the local settings table. Deleting and reinstalling the app clears it and the person can answer Yes at once. Inherent to a no-account app, but the "cannot be retried by restarting" claim in the journey note only holds for restarts.
> Fix: State the limitation in the compliance register; optionally store the stop in the Keychain (survives reinstall). Test: Keychain stop survives app data reset on device.

From J02-01

Reopening the app: still stopped

unhappy path

Relaunching shows the same stop screen. The answer cannot be retried by restarting.

Product lead [ok]

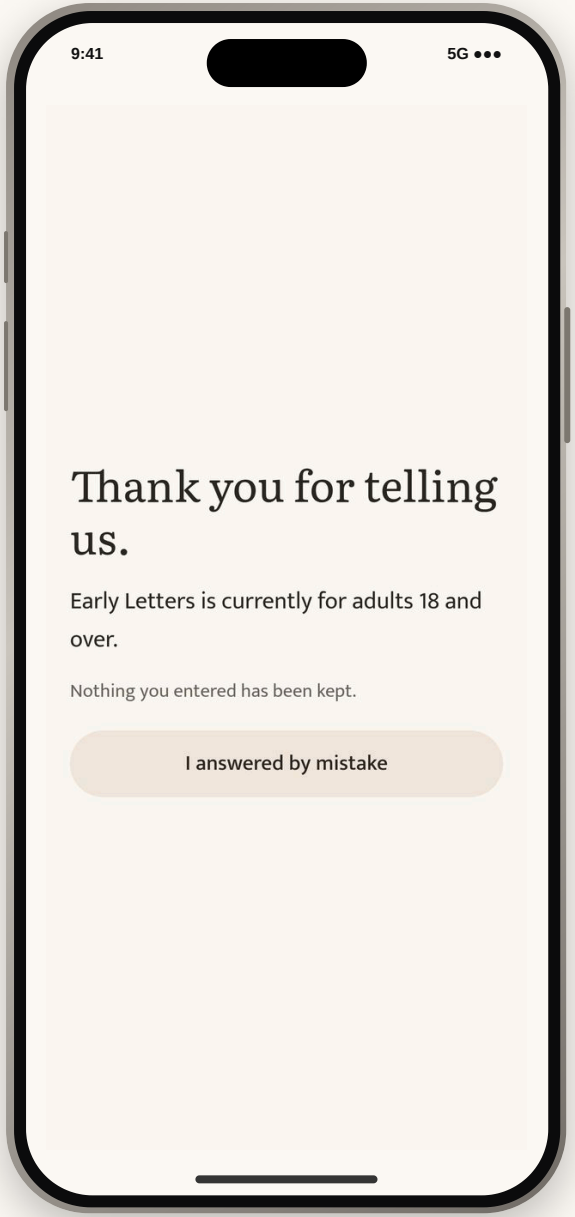

No findings

Design lead [fix]

> **MINOR** Same layout and orphaned 'us.' as J02-02 after relaunch.
> Fix: See J02-02.

Quality engineer [ok]

No findings

After 24 hours: "I answered by mistake"

unhappy path

Only once a day has passed does the stop screen offer a way back. (Browser clock moved forward 25 hours; the logic is the app's own.)

Product lead [ok]

No findings

Design lead [fix]

> **MINOR** When the way back appears after 24 hours the heading jumps up about 37 pt (layout shift), and the button sits under the text instead of in the bottom action slot.
> Fix: Reserve the button slot, or fade it in place; anchor to the bottom like Continue.

> **MINOR** Nothing tells a person earlier that a way back appears after a day, so they may feel stuck.
> Fix: Add a quiet line 'If you answered by mistake, come back tomorrow.' (no countdown).

Quality engineer [gap]

> **MINOR** The 24-hour block uses the device clock (age-gate.logic.ts). Moving the clock forward re-opens the question (this is how the step was captured); moving it back is handled and tested. Accepted risk for a self-declared gate.
> Fix: Document as accepted in the compliance register; keep test [LEGAL-REQ-002] for backward clock.

The question again, nothing preselected

happy path

The age question returns, empty, and the person can answer again.

Product lead [ok]

No findings

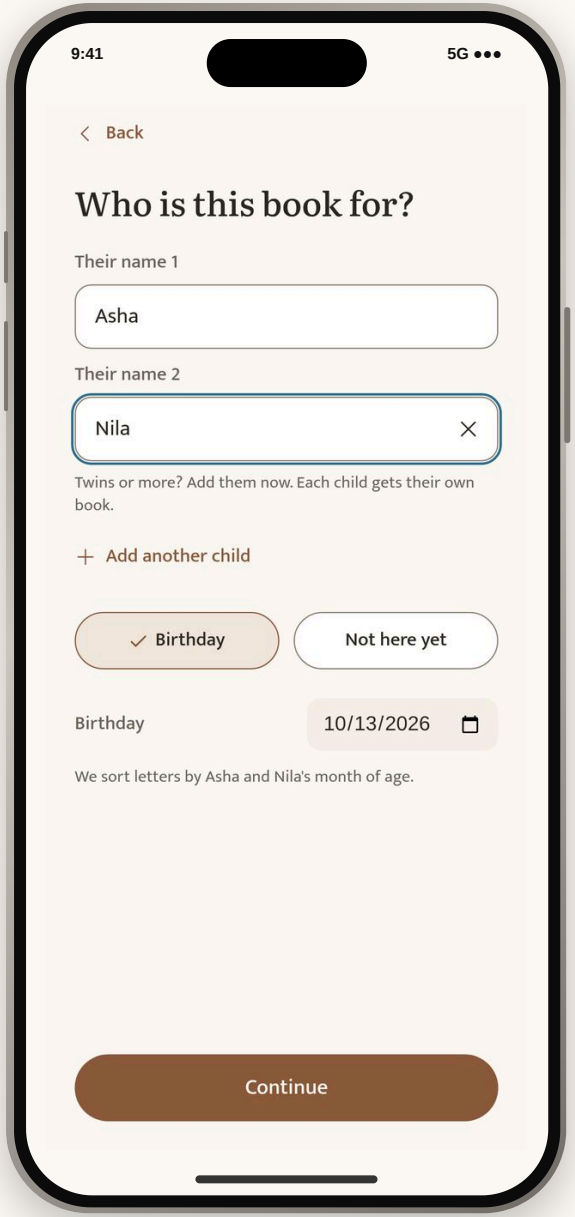

Design lead [fix]

> **MINOR** Same gate as J00-open: top-third choices, no brand presence.
> Fix: See J00-open.

Quality engineer [ok]

No findings

Quality engineer [ok]

No findings

From J03-01

The book is open, for two

happy path

The closing screen names both children.

Product lead [ok]

No findings

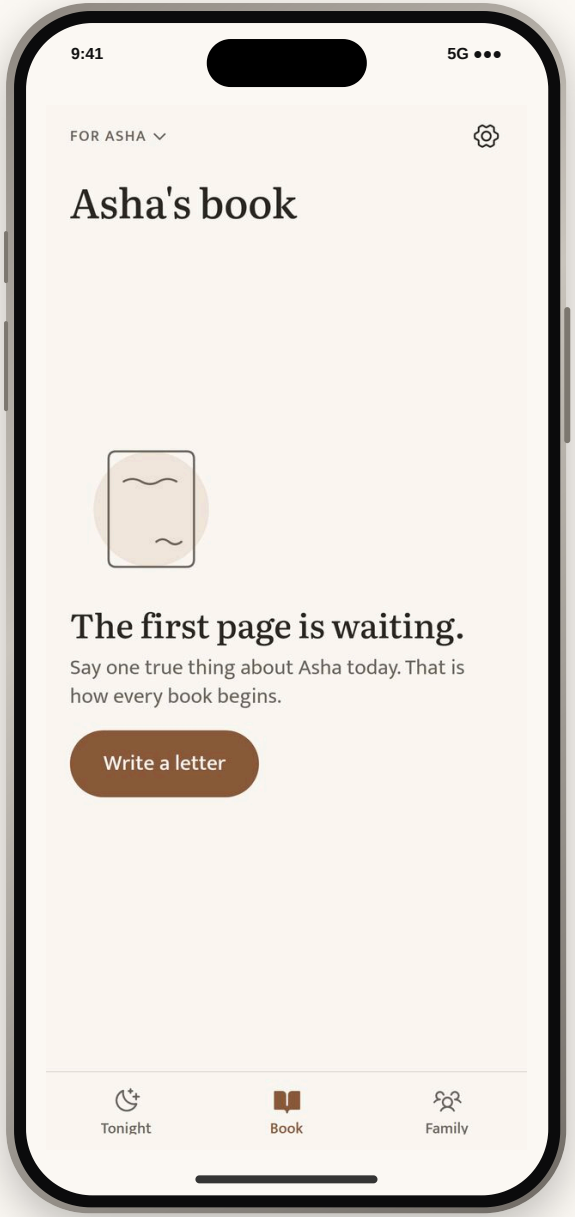

Design lead [fix]

> **MINOR** Same oversized, orphaned heading as J01-13; with two long names it grows to three lines.
> Fix: See J01-13 (display token, balanced wrap).

Quality engineer [ok]

No findings

From J03-02

The Book tab, empty, with a child switcher

happy path

The first book is open. A small switcher at the top left lets the person move between the two books.

Product lead [ok]

No findings

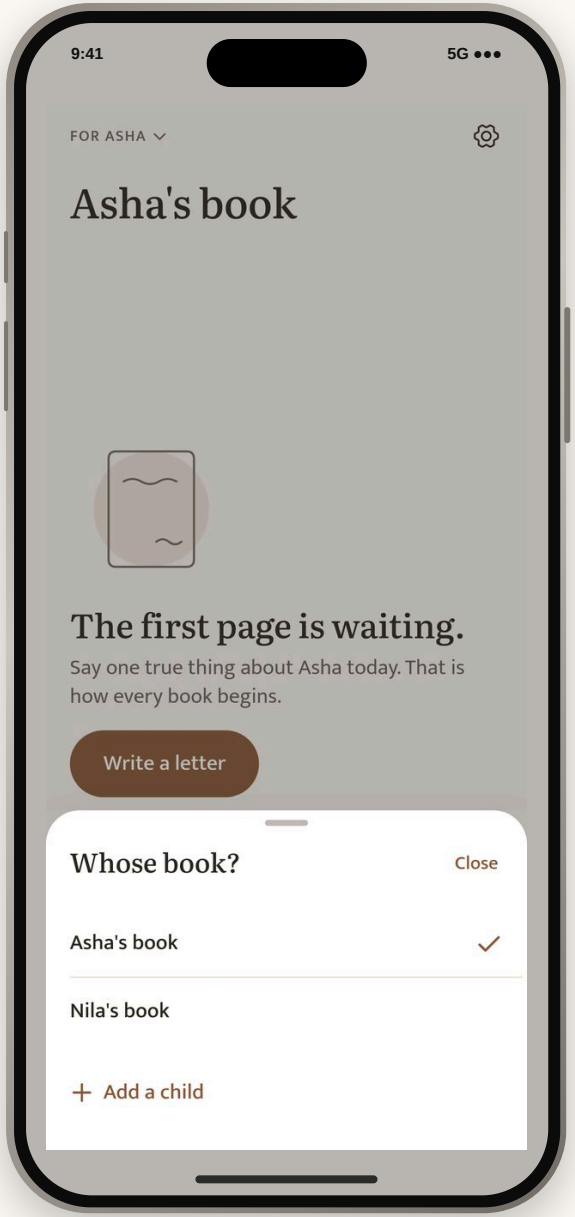

Design lead [fix]

MAJOR The child switcher is a 12 pt caps label 'FOR ASHA' with a tiny chevron in the top-left corner (hit height about 20 pt) directly above the 34 pt title 'Asha's book', which says the same thing. The real control is the least visible element.
Fix: Make the title the switcher (serif title + chevron, 44 pt tall) and drop the caps label, or render the switcher as a 44 pt chip.

MINOR The Settings gear is an ink (#2B2722) icon of about 24 pt, while every other control is accent; it needs a 44 pt hit area and a theme-aware colour (it vanishes in dark, see J18-03).
Fix: IconButton variant=plain, color accent via useTheme, hitSlop to 44.

Quality engineer [ok]

No findings

Whose book? sheet

happy path

A sheet lists every book on this phone with the current one marked. Choosing one switches Tonight, Book and writing to that child.

Product lead [ok]

No findings

Design lead [fix]

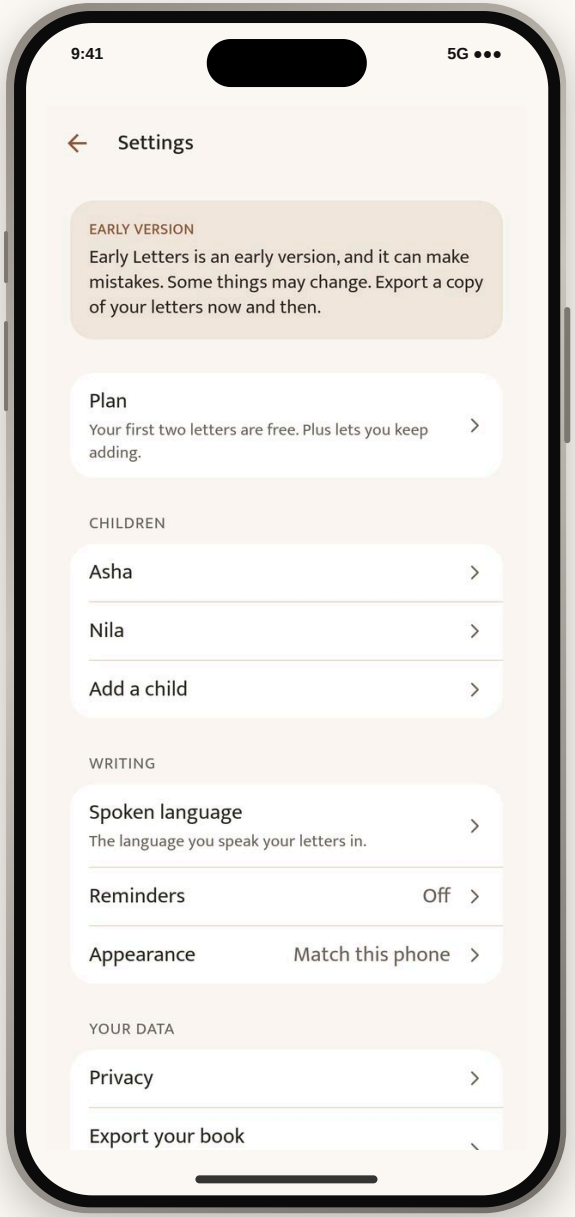

MINOR 'Add a child' sits in the Whose book sheet with no 'Plus' cue; with two books the next tap lands on a paywall (J03-08), a surprise at the worst moment.
Fix: Add a quiet 'Plus' tag on the row once a free book exists.

MINOR The close X is a 36 pt tinted circle (visual); the target must reach 44 pt.
Fix: IconButton size=md hitSlop; label 'Close'.

Quality engineer [gap]

MINOR Switch child has a gate budget of p95 300 ms offline (PRD 7.1, PRD-REQ-012). Every store change re-queries the whole book in each mounted tab and there is no automated timing of this path.
Fix: Add a timed switch-child test in the device run and a perf assertion on the 2,000-letter fixture.

From J03-04

Settings, with both children listed

happy path

Each child has a row; "Add a child" sits below them.

Product lead [fix]

MAJOR The 'Plan' row reads 'Plus: Read together whenever you like, and books for more children.' That describes the pre-D-051 optional-extras model. Under D-051 Plus is the membership that lets you keep adding letters.
Fix: Plan row subtitle: 'Your first two letters are free. Plus lets you keep adding letters.' (Align exact words with the final paywall copy.)

MAJOR The Settings footer ('We only tidy what the microphone got wrong') uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

MINOR The top banner says 'Export a copy of your letters now and then.' This is the right instinct for an on-device-only product, but it reads as a standing warning about loss, against the no-fear rule, and sits above everything else (D-060 keeps the note).
Fix: Keep the note, soften: 'Early Letters is new and we are still improving it. Export keeps a copy of your letters any time.'

MINOR 'Private by default. Never sold, never used for ads.' appears twice on one screen, and 'Recordings' and 'Storage' are two near-identical rows. There is also no way to delete a child's book or erase everything (see _journey).
Fix: Keep the privacy line once (D-061 'set places'). Merge Recordings and Storage into one row.

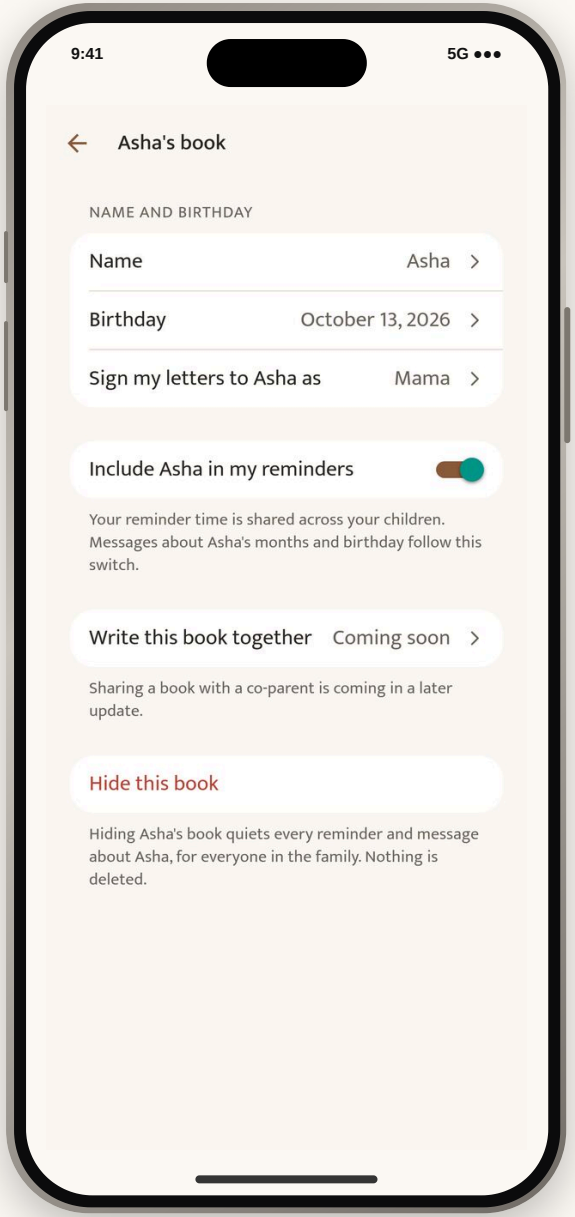

Design lead [fix]

MINOR 'Add a child' is styled exactly like a child row (same weight, chevron), an action posing as a destination; in the sheet the same item has a plus icon.
Fix: ListRow with leading plus icon and accent text.

Quality engineer [ok]

No findings

From J03-05

One child's settings

happy path

Name, date, signature, a reminders switch, and the co-parent row ("Soon"). The "Family can read" switch is hidden in v1.0 because it cannot be turned on. Hide this book is offered because there is more than one (its confirm dialog is native and does not appear on web).

Product lead [fix]

MAJOR 'Family can read Asha's book' is a switch the person can flip, but it 'stays off in v1.0' and 'starts once family can join'. A control that does nothing is a trap for a parent who wants to share with grandparents; D-055 limits launch to co-parent only and grandparent claims are barred.
Fix: Remove the switch in v1.0. Show it, with the co-parent row, only when sharing exists.

MINOR 'Hiding Asha's book quiets every reminder and note about Asha, for everyone in the family' refers to a family that cannot exist yet in v1.0.
Fix: 'Hiding Asha's book quiets every reminder and note about Asha. Nothing is deleted.'

MINOR The page offers Hide but no way to delete a book and its letters, and the 'Write this book together: Coming soon' row repeats the dead Family tab.
Fix: See _journey for the erase gap; drop the coming-soon row until it works.

Design lead [fix]

MAJOR Child, Birthday and 'Sign my letters to Asha as' show values right-aligned with no chevron or edit affordance, so it is unclear they can be changed. 'Child' is ambiguous for the name.
Fix: ListRow with trailing chevron (or an inline TextField on tap) and rename the row 'Name'.

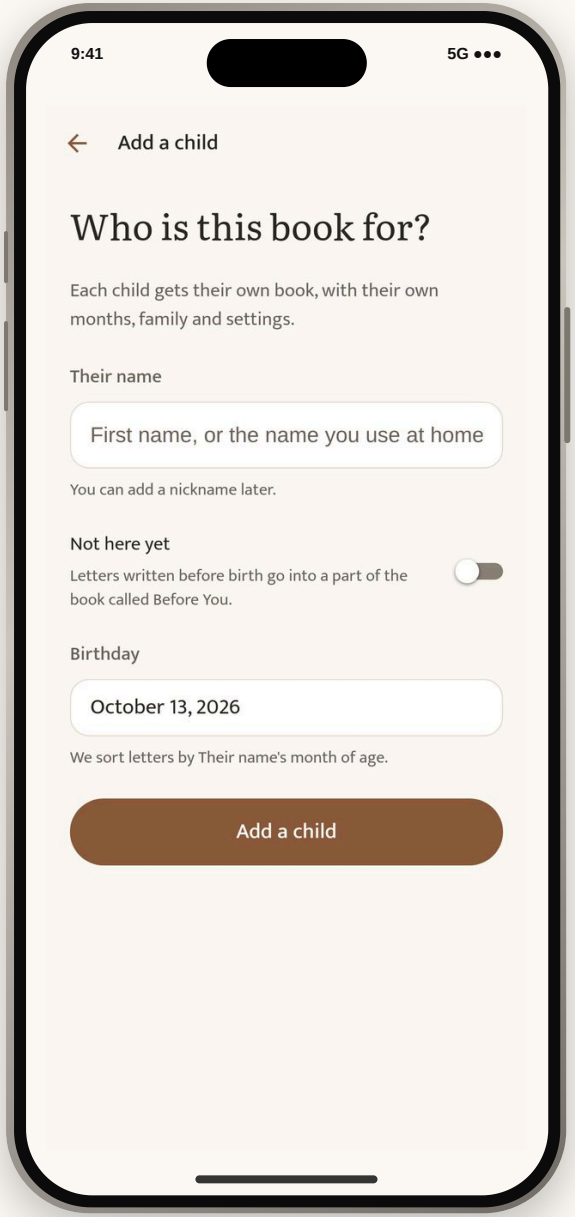

MINOR Two future features are shown in two different ways: 'Write this book together: Coming soon' (row with chevron) and 'Family can read' (a dimmed, disabled switch).
Fix: Use the same 'Soon' value row for both, or hide both in v1.0.

MINOR The switch thumb renders teal on the web build (RN-web default). On iOS the SwiftUI Toggle should take the accent tint; confirm it is not the RN Switch fallback.
Fix: QA on device; set trackColor/thumbColor from tokens in components/platform/toggle.

Quality engineer [fix]

MAJOR Name, birthday/due date and signature rows are read-only: `<ListRow title=... trailing={name} />` with no onPress (settings/children/[id].tsx:51-53). Nothing else in the app calls updateChild for them. A misspelt name, the wrong date (see J01-07) or a wrong signature can never be corrected, and the child name drives the dictionary that "fixes" misheard names. "Hide this book" is the only removal, so a duplicate or mistaken book stays forever. The Alert for Hide is native and was not observed on web.
Fix: Ship an edit form for name, date and signature (validation as in first run) and a delete-empty-book action with confirm. Tests: edit updates dictionary and chapters; hide/unhide round trip; [PRD-REQ-012].

From J03-06

Another book is free

happy path

Starting a book for another child opens the same page as the first, with no Plus gate (D-082, D-083): the first two letters are one pool across every book, and the gate is at Keep, not here.

Product lead [fix]

BLOCKER 'Every book you already have stays open for writing, reading and export, with or without Plus.' Under D-051 new letters need Plus after 2, so 'writing' stays open only for the free allowance. 'The first book you start is free, always' is also pre-D-051. This is a false claim on a paywall, the worst place for one.
Fix: 'Another book is part of Plus. Every letter you have made stays yours to read, play and export, with or without Plus.' Drop 'free, always' and 'writing'. Founder must close D-051 open edge 2 (what a second book gets) before final copy.

MINOR 'Plus is not available on this device yet.' is shown on web; confirm on device that a failed StoreKit product load gets its own calm state and a Try again, not this sentence.
Fix: Add a distinct 'We could not reach the App Store. Try again in a moment.' state with a retry.

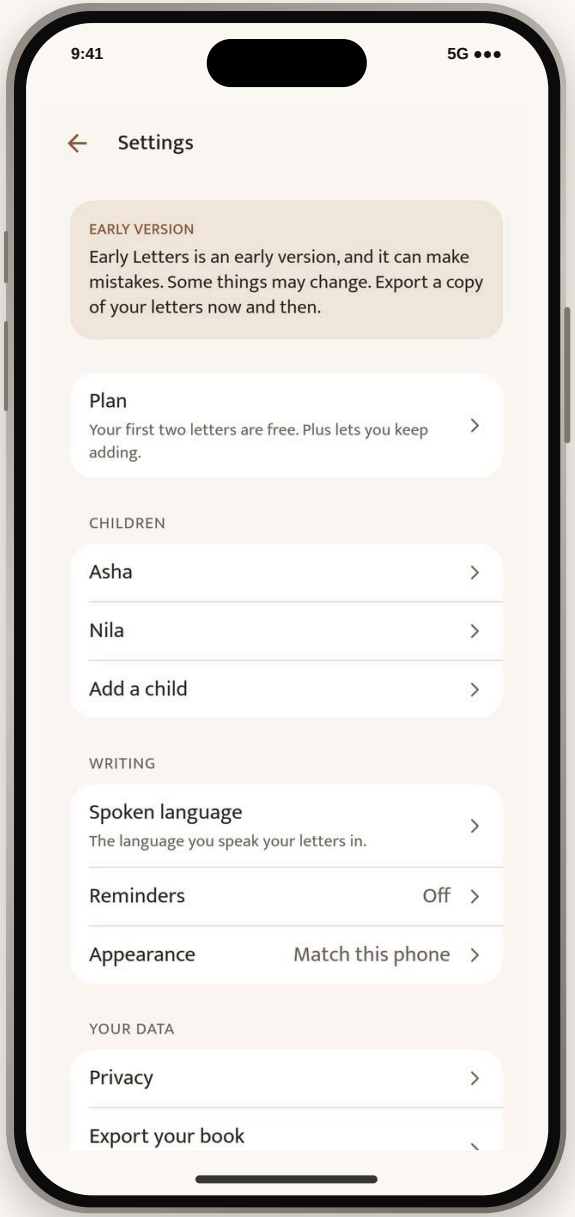

Design lead [fix]

MINOR Mixed alignment: heading and body are left-aligned, the 'not available' note and 'Not now' are centred; the heading orphans 'Plus'. The device state (a Buy control from StoreKit) cannot be judged from this web render.
Fix: Left-align all, balanced heading, bottom-anchored button group; QA the purchase CTA on device.

Quality engineer [gap]

MINOR Plus purchase states (cancelled, pending/ask to buy, offline, failed, already owned) are not observable on web. Automated coverage is the plan logic only (test/billing-plan.test.ts); StoreKit paths rely on the manual device plan (D-1 to D-12) which has not been run.
Fix: Run StoreKit config tests (E2E-14) and record evidence in docs/qa/evidence. Add a store failure state to the sheet copy review.

From J03-07

From J03-32

Tonight with a letter waiting

happy path

With a recording waiting on Review, a quiet card says so above Speak and Type. (Seeded fictional family Asha, 7 months.)

Product lead [ok]

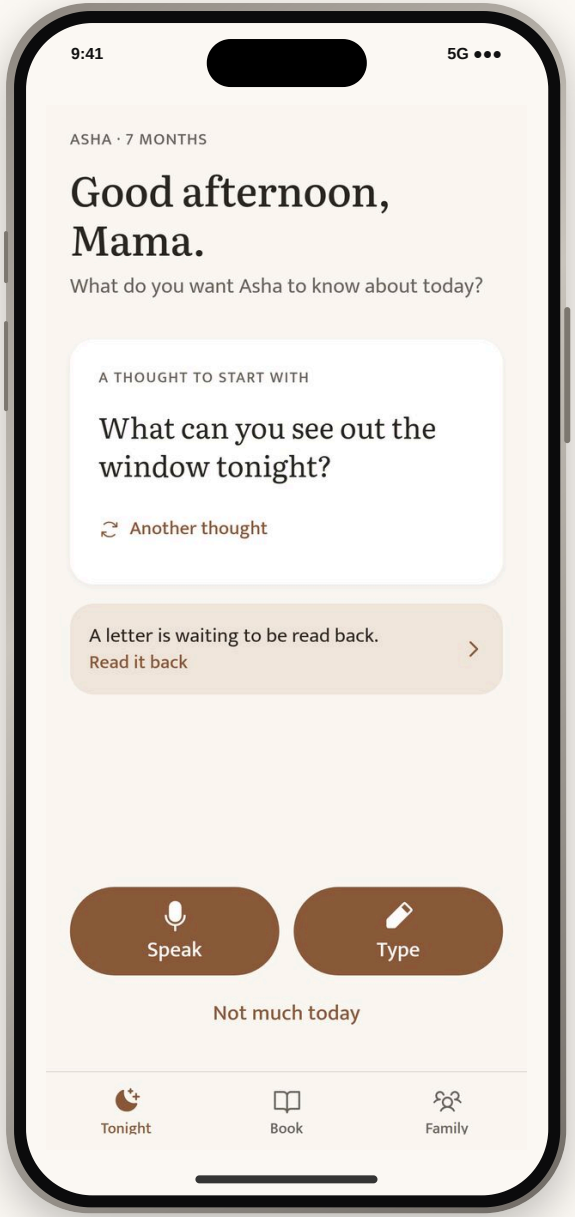

No findings

Design lead [fix]

MAJOR The 'A letter is waiting to be read back' card is the resumable, unfinished work yet it is the quietest element (accentSoft, 14 pt link, chevron) and sits below a brand-new suggestion.
Fix: Place it above the prompt card, use headline weight for the first line, and make the whole card one pressable target (Card onPress) with a single accessible name.

Quality engineer [gap]

MINOR Only the first draft is shown (`listDrafts(childId)[0]`, index.tsx:52). Kill-recovered takes, re-attached stray recordings and abandoned drafts queue up behind it with no count, no list, and (J06-12) no way to discard.
Fix: Show a Drafts list or count with open/discard. Test: three drafts all reachable.

Another thought

happy path

The prompt card swaps for a different one in place. There is no limit and nothing is counted.

Product lead [ok]

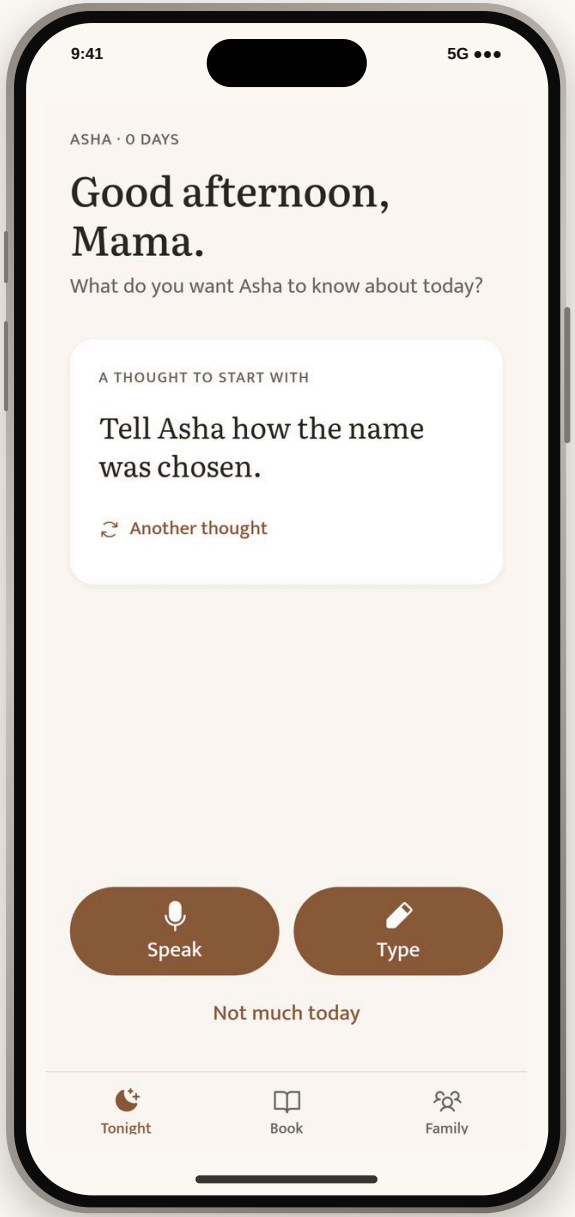

No findings

Design lead [fix]

> **MINOR** 'Another thought' changes the prompt card height (2 to 3 lines), shifting the card below by about 32 pt; 'Another thought' is a text link around 30 pt tall.
> Fix: Reserve min-height for three lines or animate layout with tokens.motion.standard (Reduce Motion: fade 200 ms); give the link a 44 pt target.

Quality engineer [ok]

No findings

Tonight on day 0

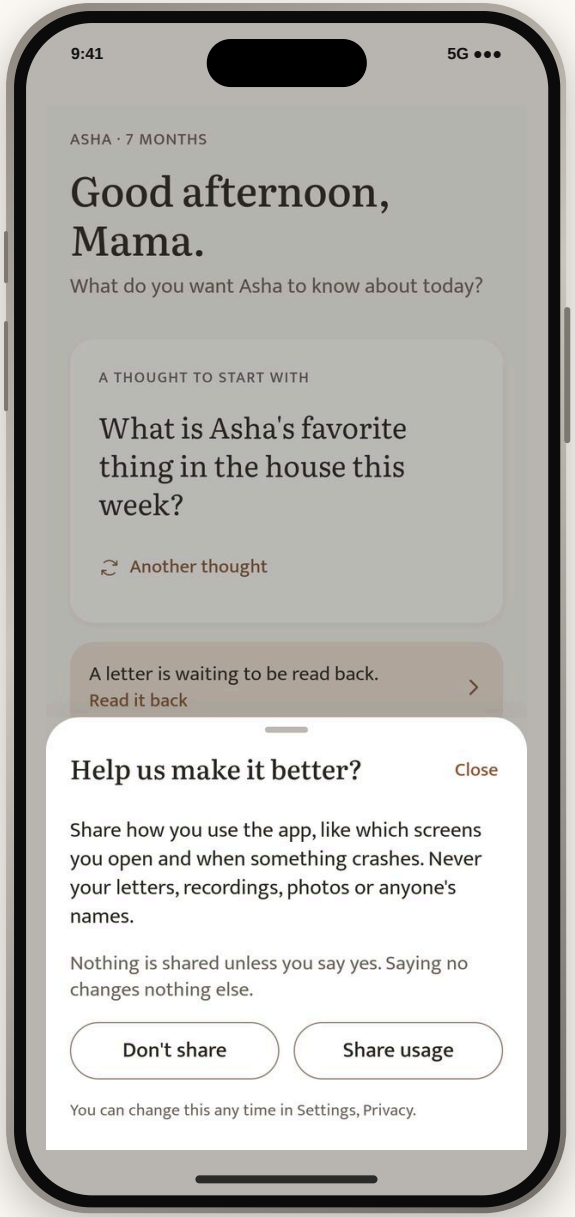

happy path

A new book: the dateline reads "Asha, 0 days", no waiting card, one prompt chosen for a newborn.

A later session: "Help us make it better?"

happy path

Never in the first session. On a later session with at least one letter, a calm sheet asks once whether to share which screens are opened and when something crashes, never any words, recordings or names. "Don't share" and "Share usage" are equal; closing it without choosing asks at most once more. (Shown on a tab screen only, 1.2 seconds after it opens.)

Product lead [fix]

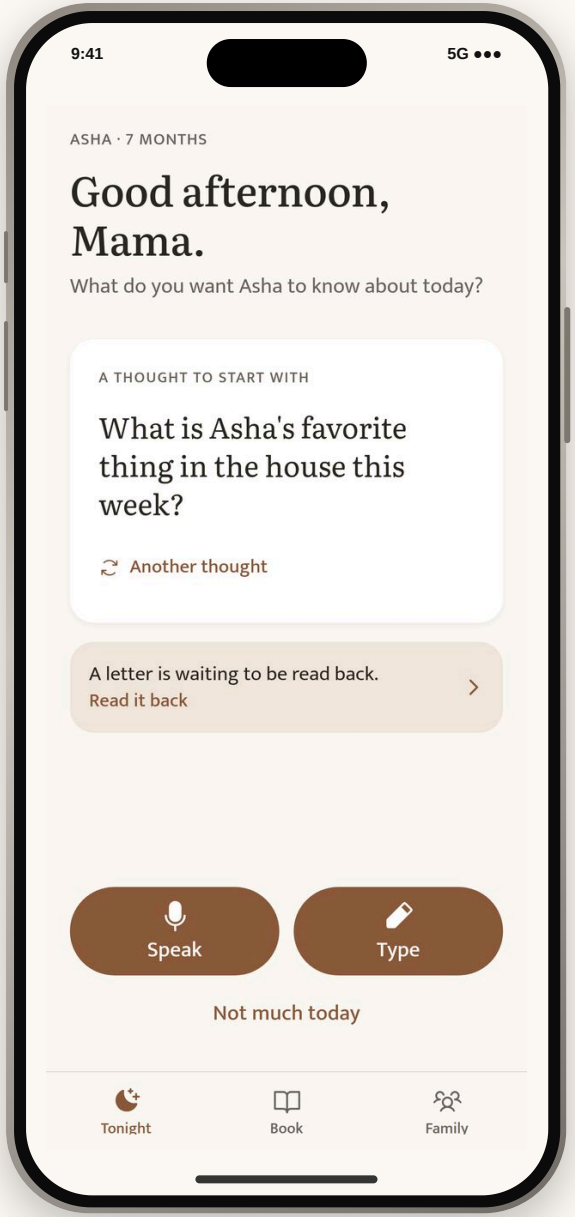

> **MINOR** The sheet says 'Never your letters, recordings, photos or anyone's names.' v1.0 has no photos, so the word hints at a feature that is not there. The sheet also appears over Tonight 1.2 seconds after it opens, which interrupts the nightly moment.
> Fix: Drop 'photos'. Show it after a letter is saved (a calm moment) rather than on arrival. Equal buttons and the 'asks at most once more' rule are good and should stay.

Design lead [fix]

> **MINOR** The sheet has an unlabeled X in addition to two equal buttons; the note says closing asks at most once more, so the X is a third choice nobody can read.
> Fix: Label it 'Not now' for VoiceOver, or remove the X and keep the equal pair.

Quality engineer [fix]

> **MAJOR** The consent sheet and the Settings switch promise "usage and crash reports... when something crashes" (strings.en.ts:676, :713) but v1.0 has no crash reporter: PostHog errorTracking autocapture is off (packages/analytics/src/posthog.ts:190) and Sentry is not installed. Saying yes sends no crash data. Claim accuracy (LEGAL-REQ-044) and founder visibility of crashes both fail.
> Fix: Either wire a scrubbed crash reporter that only starts on consent, or change the copy to "usage only". Add a claims-registry test that every claim has an implementation. Use App Store Connect/Xcode Organizer for crash-free rate meanwhile.

Declined: nothing else changes

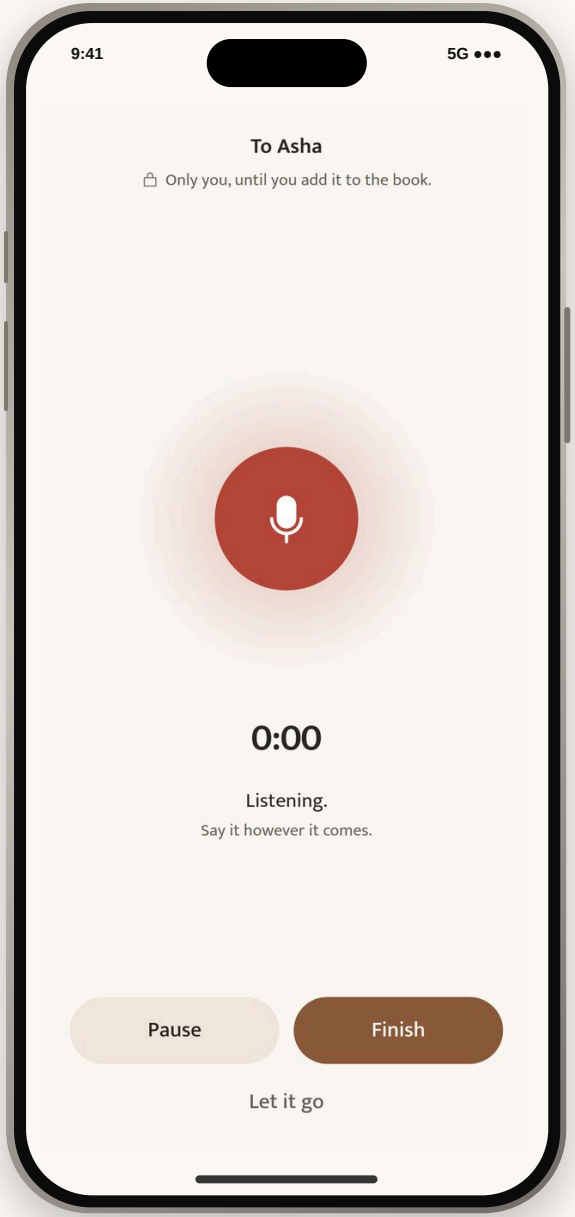

happy path

Saying no ends the asking for good and changes nothing else; it can be changed in Settings, Privacy.

Listening

happy path

Full-screen and calm: who it is to, "Only you, until you add it to the book", a running clock and a glow that moves with the voice. Microphone permission was granted (on a phone iOS asks once, in its own alert, which a browser cannot show).

Product lead [ok]

No findings

Design lead [fix]

MAJOR The 120 pt solid terracotta disc with a flat pink halo reads as a record button and is not interactive (Pause and Finish are below): people will tap it. It is also not the website's lamp-lit 'recording warmth'; it is flat on bare paper with no grain or falloff.
Fix: Make the disc the Pause target (>=44, labelled) or turn it into a ring with a small recording dot; render the glow as LampLight warmth='recording' (tokens.motion.breath: opacity 0.18-0.40, scale up to 1.18) with grain. Keep it tied to the voice level.

MINOR The clock '0:00' is semibold 28 pt; without tabular figures it will jitter each second.
Fix: fontVariant: ['tabular-nums'] on the timer.

MINOR 'Let it go' is muted text with no visible destructive cue and about 36 pt height; the real confirm is a native Alert (not seen on web).
Fix: Min-height 44; keep muted; keep the native confirm.

Quality engineer [fix]

MAJOR Recording start failures are all shown as "We can't hear you yet / microphone is off": start().catch sets phase denied (listen.tsx:118-120). Real causes (audio session busy during a phone call, prepareToRecord failing on low storage, media services reset) are mislabeled, and the card sends the person to Settings. From code reading, not observed.
Fix: Distinguish permission denied from recorder error; show "could not start, try again / check free space" with Type instead. Test: injected prepareToRecordAsync failure shows the error card, not the permission card.

MAJOR No keep-awake during recording (expo-keep-awake is used only by export). With Auto-Lock at 30 s, the screen locks mid-letter, AppState goes to background and the take is stopped and kept (listen.tsx:129). Durable, but a parent talking for 2 minutes is cut off silently and Review opens when they next unlock. Not observable on web; verify on iPhone.
Fix: Activate keep-awake while phase is recording/paused; announce in the DEVICE_TEST_PLAN. Test: manual lock test at 30 s auto-lock.

MAJOR Killed or crashed takes: AVAudioRecorder M4A has its index written on stop, so a file from a killed take may not play. The sweep marks any non-empty file "ready" (sweep.logic.ts) without checking it decodes, TDD 03 risk R-4 ("Unknown / High"), and the PRD 7.4 kill-during-save gate (500 iterations) has not been run (no evidence in docs/qa/evidence). Interruptions (call, Siri) and low storage were not observed.
Fix: Run the 500-kill gate; on sweep, open the file with AVAudioFile and mark unreadable files "unrecoverable" while keeping them; fall back to ADTS+remux if the gate fails. Test: sweep fixture with truncated M4A.

MINOR No free-space preflight before recording; Paths.availableDiskSpace is checked only for export and pack downloads. A full phone fails inside the recorder or SQLite, with no designed message. Metering is polled at 20 Hz into React state (listen.tsx useAudioRecorderState(...,50)): battery and re-render cost over a 10-minute take unmeasured.

Fix: Check free space (e.g. under 100 MB) before beginTake and show a calm card; measure CPU/energy of a 10-minute take with Instruments.

From J04-03

Paused

happy path

Pause stops the clock and the glow. Keep talking continues the same recording.

Product lead [ok]

No findings

Design lead [fix]

> **MINOR** Pausing removes the 'Say it however it comes' line and the whole stack shifts 13 pt, and the disc changes from filled to outlined white while the glow disappears; the change reads as two events.
> Fix: Keep the line (swap text to 'Take your time'), crossfade the disc over tokens.motion.fadeMs.

Quality engineer [ok]

No findings

Finished: Review opens at once

happy path

The take is kept first, then Review opens. It says it is writing down what was said. The web build records with the browser's fake microphone (a steady tone) and has no speech model, so the words never arrive; the real app writes them down on the phone.

Product lead [fix]

MINOR 'Writing down what you said.' gives no sense of how long it takes and offers no instruction. On the real app, transcription of a long take on an older phone could take a while; I could not verify timing. Also VOICE.md's own example for this moment is 'Listening back to what you said', and 'writing' hints at the app writing.
Fix: 'Listening back to what you said. You can close this, it will be waiting on Tonight.' Add a gentle progress shape for long takes.

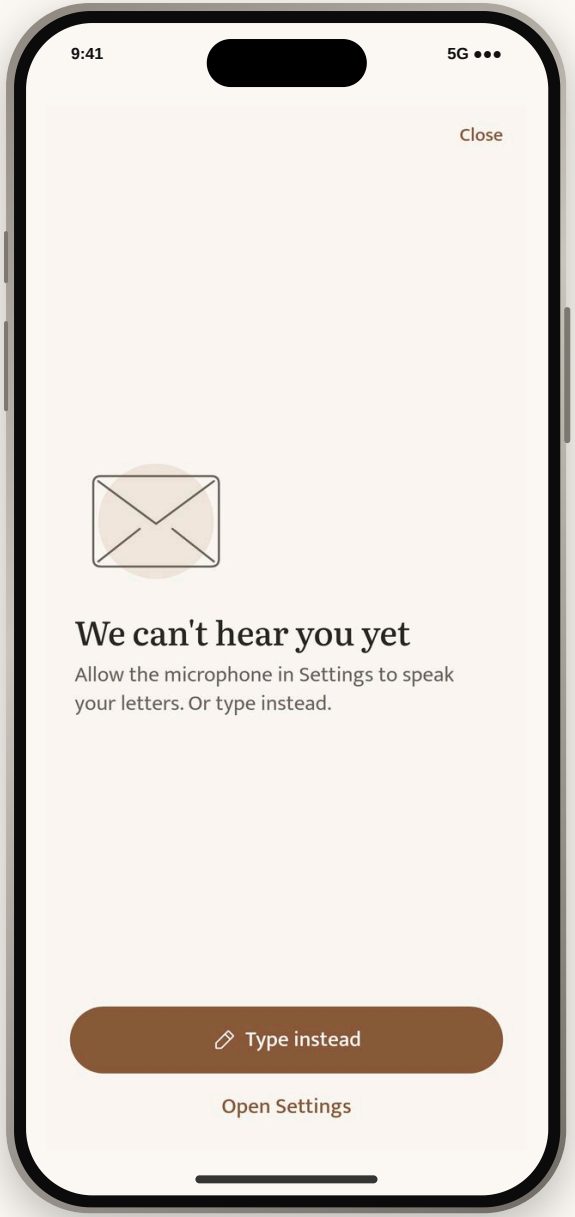

Design lead [fix]

MAJOR 'Writing down what you said.' is a static white card with centred muted text: no breathing, progress or elapsed cue, no 'your recording is safe', and Close and 'Hear it' sit live. On a real device the on-device model may take several seconds; a still card looks stuck.
Fix: Reuse Breathe (tokens.motion.breathIdleMs 4000) on a quiet pool; add 'Your recording is safe. This can take a moment.' after 6 s; static under Reduce Motion.

MINOR Centred text in a left-aligned screen; the loading card has the same raised-white treatment as a finished letter card.
Fix: Left-align; use a flat `surface` placeholder so a loading card is not mistaken for content.

Quality engineer [fix]

MAJOR The first spoken letter has no words until a 575 MB model downloads (J14-01); the download starts at the first Review (requestWords -> requestSpeechFor), waits for Wi-Fi by default, and "Writing down what you said" has no timeout or time estimate. Recovery exists (Keep voice, Type instead, Close) and nothing is lost, but the first-run "magic" moment depends on a large download with no prefetch. Review without the model on web is a web artifact; the real transcription time (PRD: 2-minute letter 30 s on iPhone SE 3) is unmeasured.
Fix: Prefetch speech after first run on Wi-Fi, show "Getting ready, about N minutes" and a retry hold state; measure transcription time on SE 3 (BL-043). Test: queue machine tests for pack wait exist; add device timing evidence.

Microphone is off

unhappy path

A calm card, not an error: it offers to type the letter instead (first), open iOS Settings, or close. The browser denial is simulated by refusing getUserMedia; on a phone it is iOS's permission state, and "Open Settings" is native and does nothing on web.

Product lead [ok]

No findings

Design lead [fix]

MAJOR The permission card is a floating white sheet (radius 28) with no scrim or grabber and an empty-envelope drawing, which says 'mail', not 'microphone'; the art also starts 16 pt inside the text edge.
Fix: Use the shared Sheet (scrim + grabber), mic-off line art, align art to the gutter.

MINOR 'Open Settings' (the actual fix) is a 16 pt text link below 'Type instead' and 'Close' is a second link; two stacked links of equal weight.
Fix: Open Settings as a secondary Button (outline, 56 pt); Close as quiet.

Quality engineer [fix]

MINOR After enabling the microphone in iOS Settings and returning, the card stays until Close and re-tap: the denied state has no AppState re-check (listen.tsx only registers the background handler for recording). The OS prompt appears on entering Listen without an in-app priming sheet (LEGAL-REQ-007 asks for an explanation first; the promise screen carries it).
Fix: Re-check permission on foreground and continue automatically; confirm priming copy with counsel. Test: DEVICE_TEST_PLAN denied -> allow -> return.

MAJOR Deep link can start a recording: `scribe://listen` (and /review, /write, /read-together) passes through redirectSystemPath unchanged (+native-intent.tsx:72 `route: opts.path`; entry.logic.ts), and Listen starts the recorder on mount without a tap (listen.tsx useEffect start()). A link in Safari or another app can therefore open the app on the microphone permission prompt and begin recording once permission exists. LEGAL-REQ-011 says the app never auto-starts recording. From code reading, not tried.
Fix: Allowlist routes in redirectSystemPath (everything except invite/auth goes to "/"), and require an in-app navigation token for /listen. Test: classifyIncomingUrl/planIncomingLink returns "/" for /listen, /review, /write.

Typing instead

happy path

The person lands on the Write page for the same prompt.

From J05-06

Finished at once

unhappy path

Finish tapped straight after starting. The app keeps whatever was captured and opens Review; it does not refuse a short or empty take. The web build records with the browser's fake microphone (a steady tone) and has no speech model, so the words never arrive; the real app writes them down on the phone.

Product lead [fix]

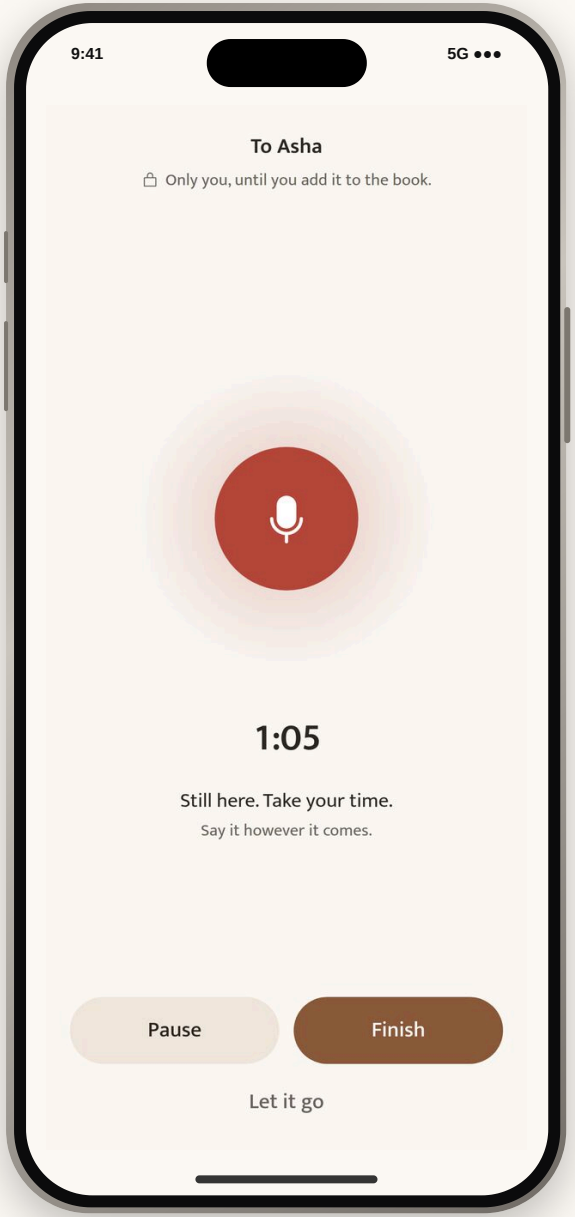

MINOR Tapping Finish at once keeps an empty take and opens Review, which leaves a junk draft or an empty 'Nobody spoke' letter in the Book (J09-05). One-handed, accidental double taps are likely.
Fix: If under about 2 seconds, say 'That was very short. Keep it, or let it go?' with Let it go first, or discard silently-empty takes under 1 second.

Design lead [gap]

MINOR The end state for a very short or empty take (nobody spoke, transcription failed, model missing) is not shown on a real device: the web build sits on 'Writing down...' forever, so the real empty/failed designs are only inferred from seeded Book cards.
Fix: QA to capture on device: short take, silent take, model not downloaded, transcription failure; design to confirm each has title, body and an action.

Quality engineer [fix]

MAJOR A Finish tapped at once (or a 0-byte take) opens Review in the "waiting" state showing the transcription-failed heading (review.tsx phase waiting uses copy.errors.transcriptionFailed) when the real cause is an empty recording. The only actions are Type instead, Close, or "keep the recording" (which saves an empty recording as a letter). Review has no discard, so accidental takes pile up as drafts (J04-01, J06-12).
Fix: Detect empty/under-1-second takes and offer "Let it go" plus a correct message. Test: finalizeTake with 0 bytes shows discard, and discard deletes the file only after confirm.

Over a minute in

happy path

The clock keeps counting with no limit (here past a minute). If the level stays below speaking level for 8 seconds the line under the clock becomes a gentle "still here" (on web the fake microphone and the missing level meter make that unreliable, so it is not asserted). On a phone the elapsed time is announced to VoiceOver once a minute.

Product lead [ok]

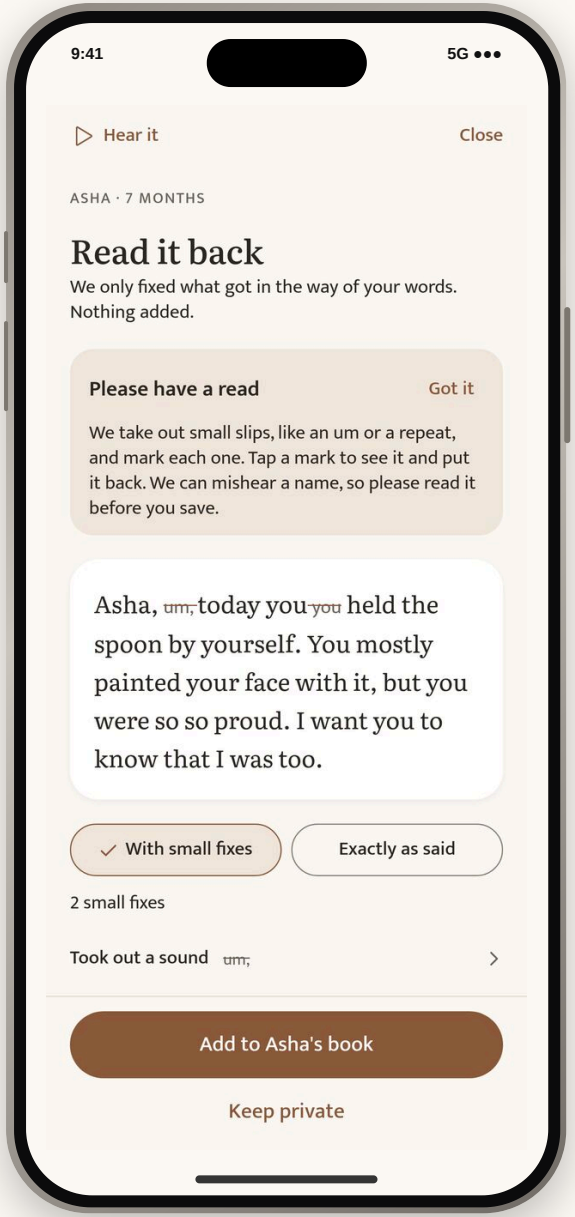

No findings

Design lead [ok]

No findings

Quality engineer [gap]

> **MINOR** No maximum length (0.48 MB/min, so a 3-hour take is about 86 MB) and transcription memory for very long takes is unmeasured (Part n of m chunks exist). The "still here" line and the once-a-minute VoiceOver announcement could not be observed (web fake mic, no meter).
> Fix: Soft cap or warning at 30 minutes; run a 60-minute take through the queue on SE 3 for memory (resident estimate 1 GB for the turbo model). Test: device run.

Review, with a first-time note

happy path

The words as spoken, with each tidy-up quietly underlined, a count of small fixes, and a one-time note saying what was and was not done. Words come from the seeded fictional family Asha (the web build has no speech model, so a real recording never gets words).

Product lead [fix]

MINOR Review carries a lot at once for a tired parent: a first-time note, a 'small fixes' list, two near-identical links ('Show exactly what I said' and 'Keep it word for word', one views and one applies), 'Change words', a 'Does this sound like you?' check, a privacy line, then two actions. The primary action is pinned, which helps.
Fix: Group the two links under the fixes list with distinct labels: 'See what you said' and 'Keep my exact words'. Hide the 'sound like you' check until 'Not quite' is relevant, or move it below the buttons.

MINOR The dotted marks where words were removed are not explained. The first-time note does not say 'tap a dotted mark to see what changed', so a person may think they are typos.
Fix: Add to the first-time note: 'Tap a dotted mark to see what we fixed, and put it back if you like.'

MINOR 'Does this sound like you?' has no stated purpose: the step note says nothing is stored about the words. I could not verify whether the answer is counted. If it feeds analytics it must be opt-in (D-003).
Fix: Say what it is for, or drop it. Confirm it is not sent when analytics are off.

Design lead [fix]

MAJOR Tidy-up marks render as tiny dotted '.....' tokens (about 9 pt, 28 x 10 pt) in place of removed words, with extra gaps either side. They look like ellipsis typos, are well under 44 pt, and they are the one interaction that carries the product's promise (every edit visible and reversible).
Fix: Render a visible mark with accentSoft wash + editMark underline (as the put-back state already does), min width 24 pt, hitSlop 16 pt vertical; keep the removed word out of the text flow.

MAJOR Hierarchy below the card is flat: a 'fixes' list, three accent text links ('Show exactly what I said', 'Keep it word for word', 'Change words'), a feedback question and two outlined pills, all beneath a 130 pt pinned footer. Roughly nine interactive things across two screens, the question is hidden behind the footer.
Fix: Replace the two view links with one ChoiceGroup segmented 'Tidied | Exactly as said' above the card; fold the fixes list into a single disclosure inside the card; move 'Does this sound like you?' after save or into a sheet.

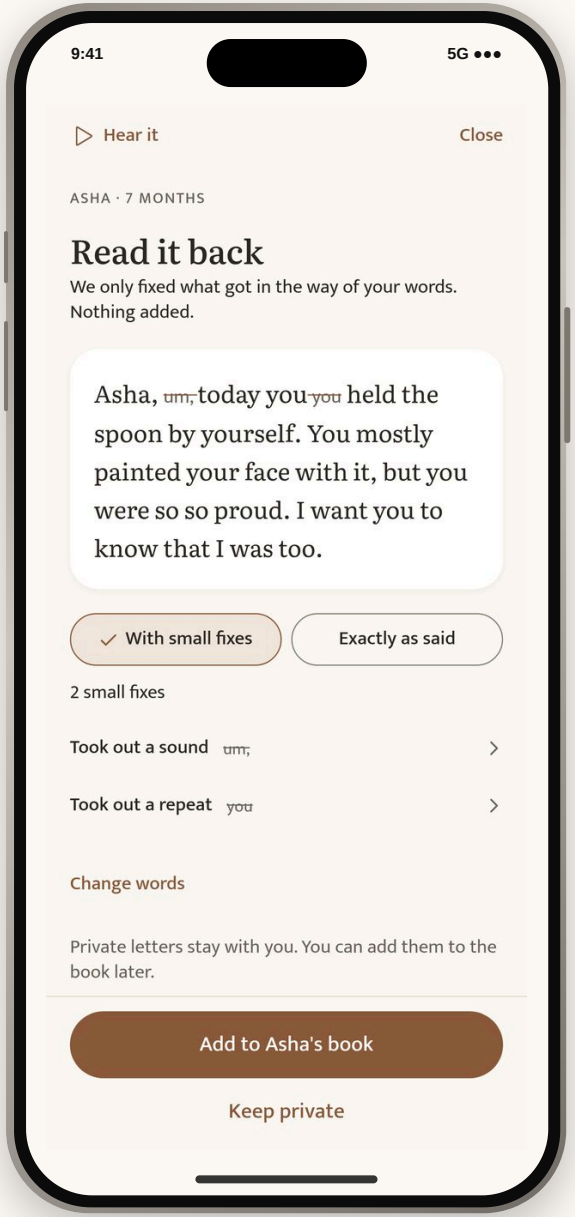

MINOR The first-time note (the trust message) is set at about 13 pt, the smallest text on screen, with a 'Got it' of about 20 pt height.
Fix: subhead 16/21, Got it as a 44 pt quiet button.

MINOR Two stacked 56 pt buttons make a 130 pt footer (about 164 pt with the 34 pt inset, 19 percent of the screen); at large text it will crowd the letter.
Fix: Primary full width, Keep private as a quiet 44 pt button; verify at AX3.

Quality engineer [gap]

MINOR The sticky two-button footer plus the scroll content at AX5 Dynamic Type may leave little scroll area (screenshot shows the links row clipped under the footer at default size). Not observable on web.
Fix: Check Review at AX5 on device; collapse footer to one row at large sizes. Test: E2E-15 AX5 screenshots.

From J05-03

First note dismissed

happy path

"Got it" collapses the note for good.

Product lead [ok]

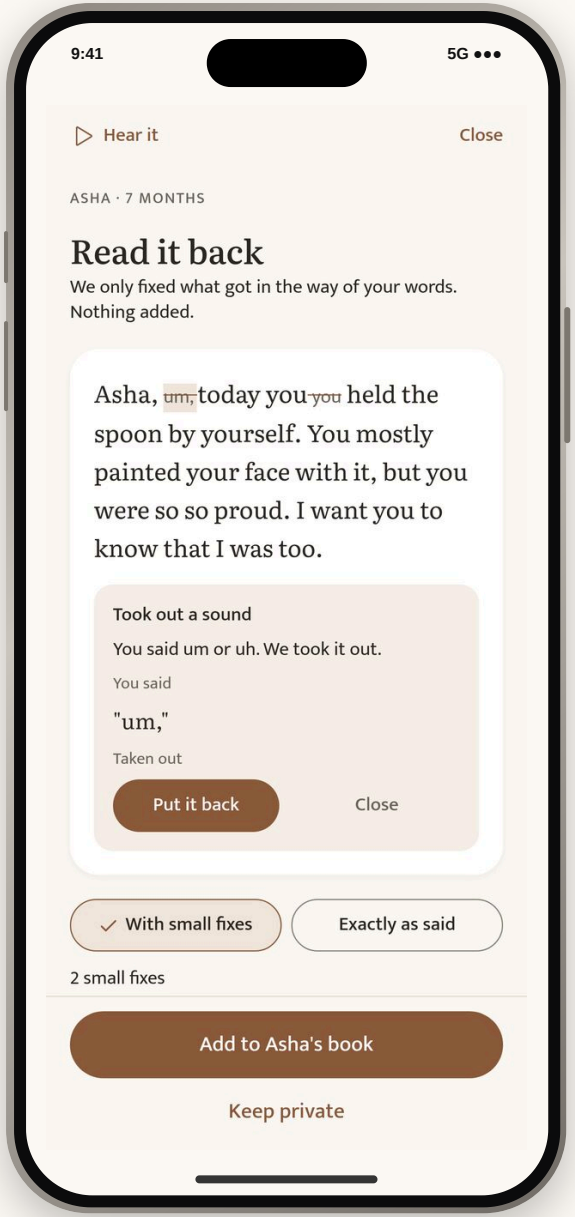

No findings

Design lead [fix]

MAJOR The rows Filler (um) and Repeat (you) are tappable per the journey note but show no chevron or press state, about 20 pt of visible text spaced 48 pt apart, so they read as a caption list.
Fix: ListRow with trailing chevron and min-height 48; one disclosure group.

Quality engineer [ok]

No findings

Why was this changed?

happy path

Tapping a tidy-up (the underline or its row) says what kind of fix it was, shows the exact words said and the tidied version, and offers to put it back.

Product lead [ok]

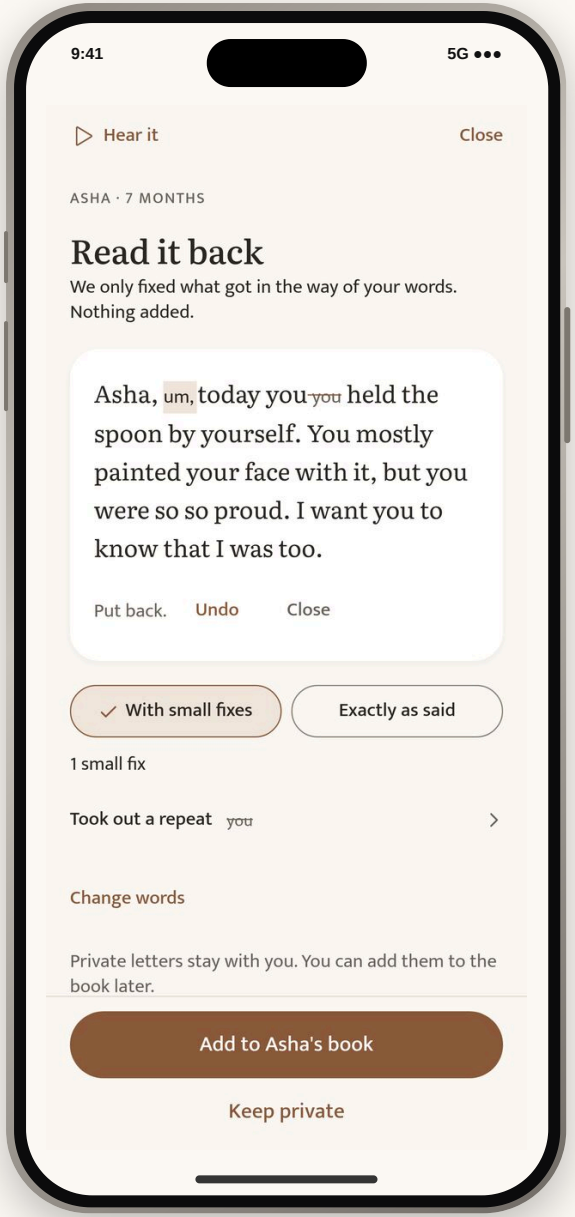

No findings

Design lead [fix]

> **MINOR** Inline explanation panel is good (in place, plain words). 'Close' is a bare 15 pt text link next to a 44 pt 'Put it back' pill; three text levels inside a card inside a card.
> Fix: Close as quiet Button 44 pt; flatten the panel to one `surface` card.

Quality engineer [ok]

No findings

Put back

happy path

The original words return, marked for a moment, with Undo beside them.

Product lead [ok]

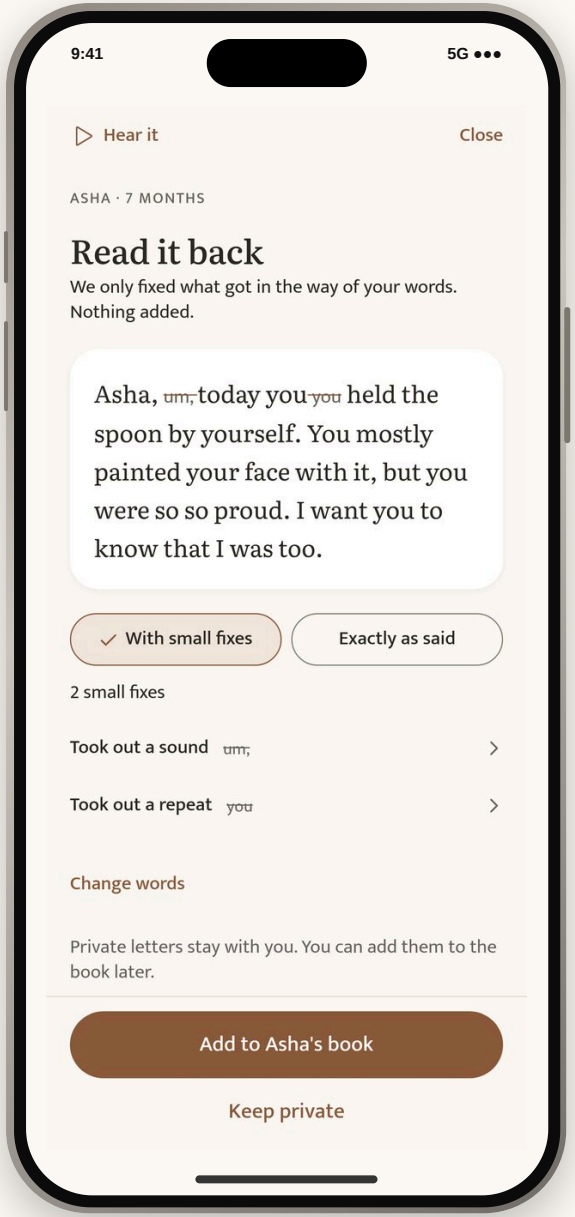

No findings

Design lead [fix]

> **MINOR** The restored word is highlighted but loses its space: 'Asha, um,today' reads as one run. The 'Put back. Undo Close' row is three text items with irregular spacing; Undo (the safety control) is bold text about 20 pt tall.
> Fix: Add a hair space after the mark; make Undo a quiet Button sm (44 pt).

Quality engineer [ok]

No findings

Undo the put-back

happy path

Undo re-applies the tidy-up. Every edit is reversible both ways.

Product lead [ok]

No findings

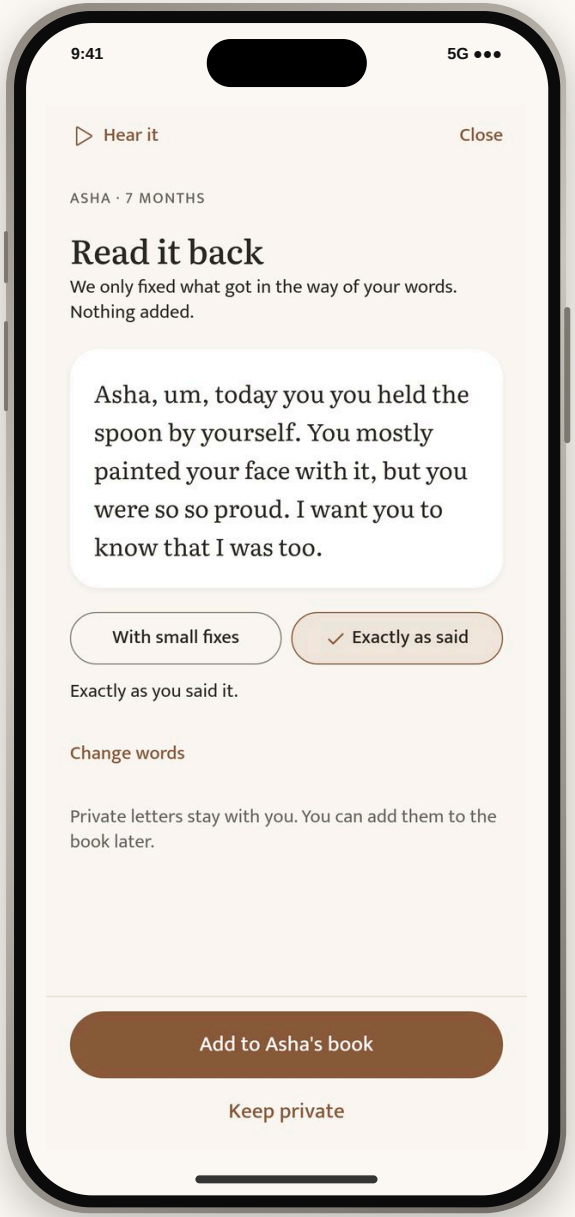

Design lead [ok]

From J06-04

Exactly as said

happy path

One tap shows the words exactly as spoken, with their "um" and repeats; the screen says so. This is the view and the choice for this letter, until it is saved.

Product lead [ok]

No findings

Design lead [fix]

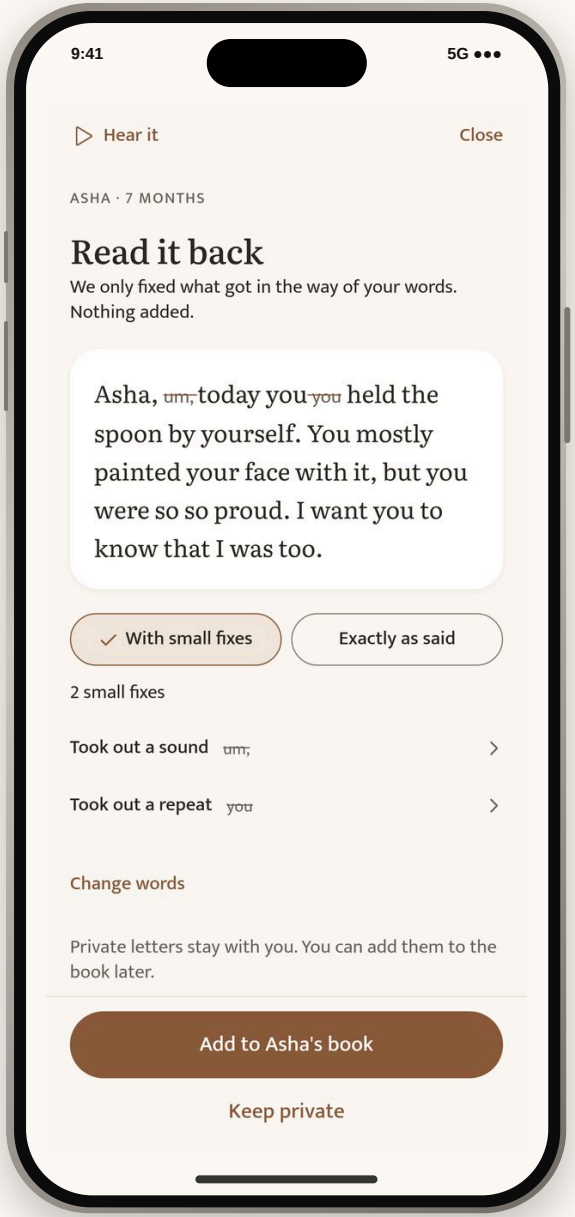

MINOR The subtitle still says 'We only fixed what got in the way of your words. Nothing added.' above a card labelled 'Exactly what you said', which contradicts the view.
Fix: Swap the subtitle to 'This is exactly what you said.' while raw is shown.

MINOR 'Show tidied version' (a view toggle) and 'Keep it word for word' (a permanent action) are adjacent same-style links, so a mis-tap commits a change.
Fix: Segmented toggle for view; a distinct outlined button with confirm for the permanent choice.

Quality engineer [ok]

No findings

From J06-05

Back to small fixes

happy path

The same control returns to the words with each small fix marked. Every choice is reversible both ways.

Product lead [fix]

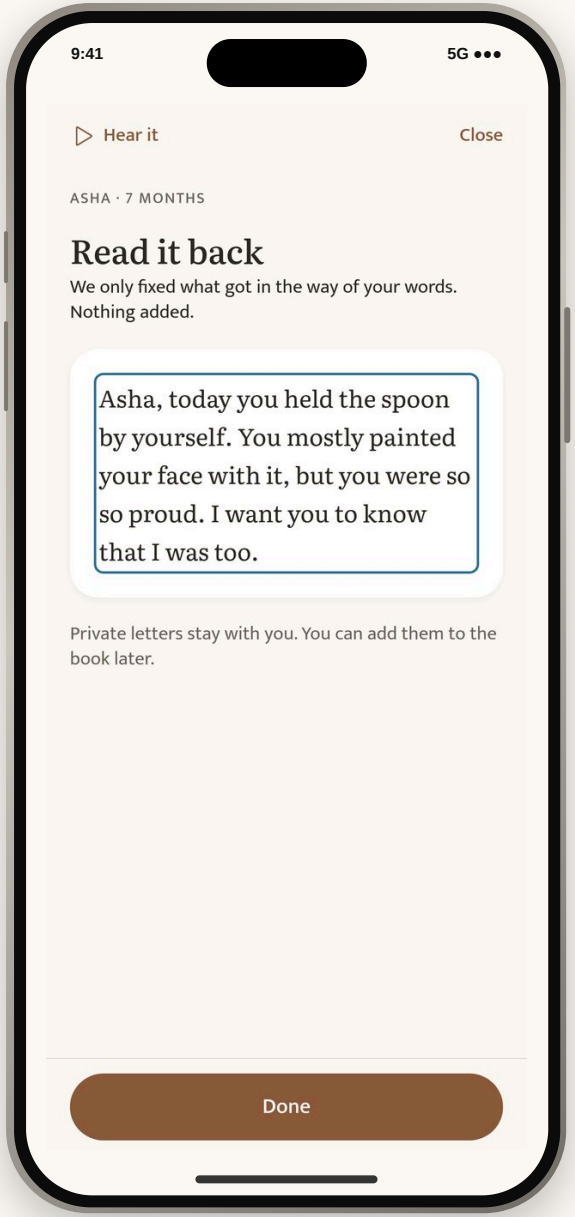

> **MINOR** After the person taps 'Keep it word for word' the screen says 'Word for word. Nothing needed fixing.' That is not true: two fixes were just undone. It makes a parent doubt what happened.
> Fix: 'Word for word. Nothing was changed.'

Design lead [fix]

> **MINOR** 'Word for word. Nothing needed fixing.' is inaccurate after the person reverted two fixes, and the 'Show exactly what I said' link is still offered although the text is already the raw text.
> Fix: 'Word for word. Nothing was changed.'; hide the redundant link.

Quality engineer [ok]

No findings

Change words

happy path

The person may edit any word themselves, in the letter face. Done returns.

Product lead [ok]

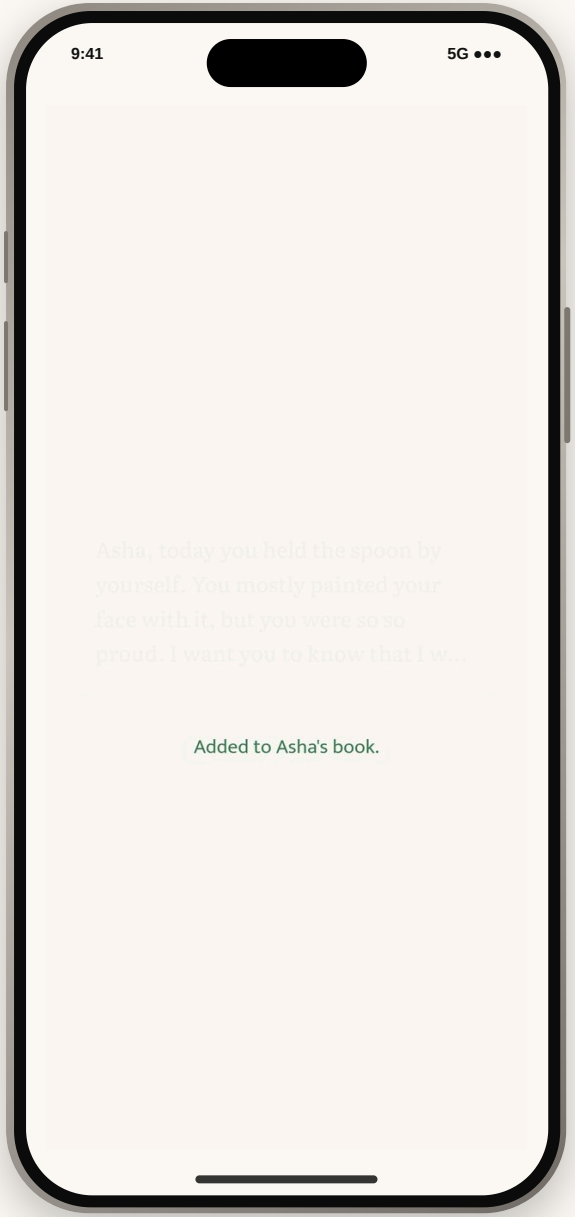

No findings

Design lead [fix]

MAJOR The edit field renders in a browser default serif with a square amber outline; it is not Literata 20/32, has no radius, and does not use the `focus` ring (#2F6F8F, 2 pt, outside). Both footer buttons are disabled, and the only way out ('Done') is a 14 pt text link below the card, the smallest control during the most committing task.
Fix: TextInput with fontFamily letterBody, selectionColor accent, outline none, focus ring token; change the footer to a primary 'Done' while editing. The outline may be a web artifact; verify on device.

Quality engineer [fix]

MAJOR Changed words live only in component state (review.tsx:135 userText). Tapping Close, or the app being killed, drops the person's corrections with no warning; the draft remains but the edits do not. There is no maxLength on the edit field, and the saved machine_edits no longer replay to the hand-edited final_text, with no marker that a person edited it.
Fix: Persist edits to the draft (autosave like Write), warn on Close, record a user-edit marker in the edit log, cap length. Tests: kill during edit restores text; export shows user_edited.

Saved to the book

happy path

The letter settles into a card with "Added to Asha's book". Review closes by itself or on tap.

Product lead [fix]

MINOR Same line as J06-07: 'Word for word. Nothing needed fixing.' under a letter that still has an 'um' and a repeat.
Fix: 'Word for word. Nothing was changed.'

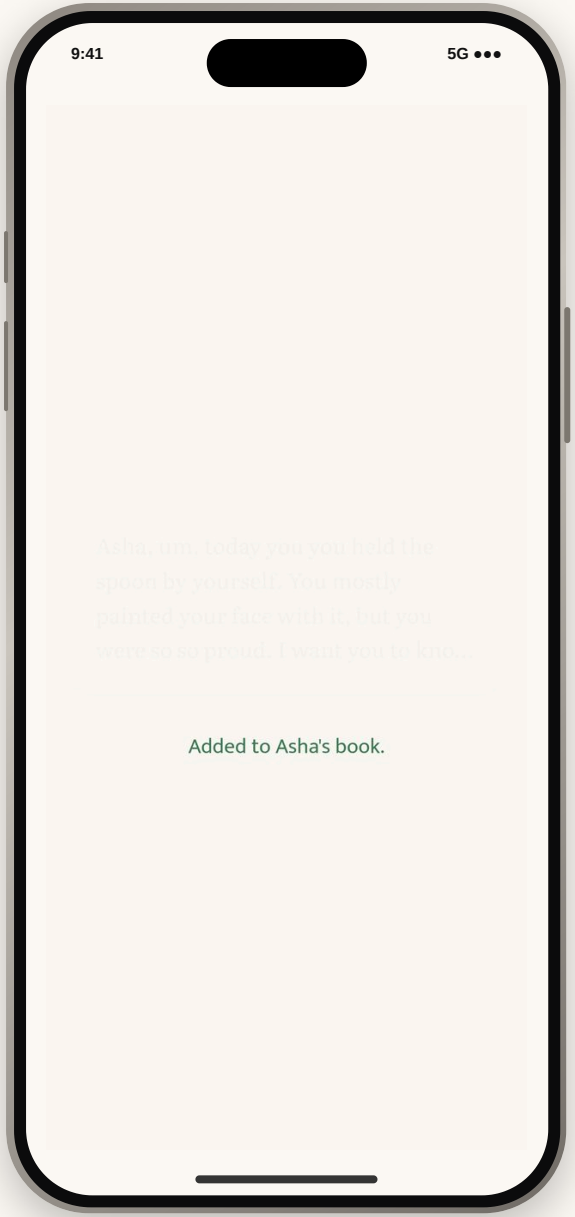

Design lead [fix]

MAJOR Choosing 'Not quite' fills it solid accent, identical to the primary 'Add to Asha's book' below, so the screen has two solid brown pills and a selection looks like the main action. No check icon (chips elsewhere have one).
Fix: Selected = accentSoft fill + accent edge + check (ChoiceGroup spec); solid accent only for the one primary.

MINOR The kind follow-up line ('Tap any word to change it...') promises tap-to-edit but nothing in the text looks tappable.
Fix: Underline-on-hover is not available; add an 'Edit' affordance on the card or reword.

Quality engineer [ok]

No findings

Saved to the book

happy path

The letter settles into a card with "Added to Asha's book". Review closes by itself or on tap.

Product lead [fix]

> **MINOR** Saving settles with 'Added to Asha's book.' and nothing else. Under D-051 the person should learn, calmly and once, that the free letters are being used (e.g. after letter 2), or the paywall at letter 3 is a surprise. No such state exists.
> Fix: After the second letter: 'Added to Asha's book. This was your second free letter.' Wording for founder and legal.

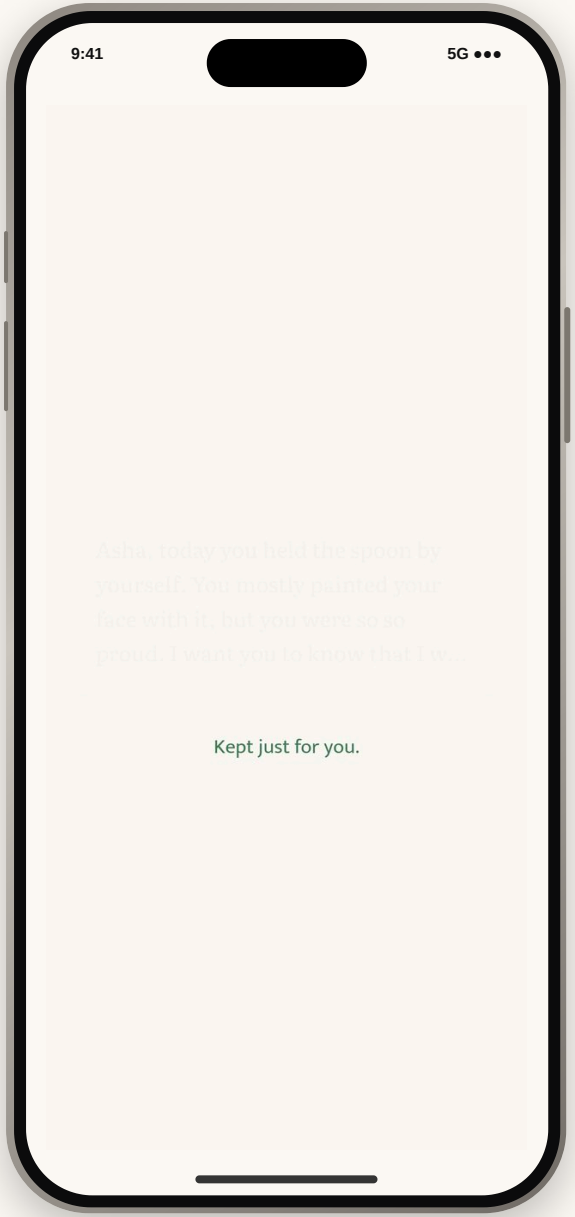

Design lead [fix]

> **MINOR** The receipt is a faded ghost of the letter and a green 16 pt line. Calm and consistent with 'saves are receipts', but the moment a first letter lands has no brand warmth (no quote pair, no wash). Captured mid-fade.
> Fix: Use tokens.motion.newMarkMs (1600 ms) accentSoft wash and the quote pair settling; Reduce Motion: cross-fade 200 ms.

Quality engineer [gap]

> **MINOR** The saved card auto-closes after 900 ms (review.tsx:290), a time limit for screen reader users (WCAG 2.2.1). A failed save shows only the generic "something went wrong" line with no retry button (save stays on Review; draft intact).
> Fix: Do not auto-dismiss when VoiceOver is on; add a Try again button to the failure line. Test: save with injected DB error leaves draft and shows retry.

From J06-09

Kept private

happy path

The letter is saved outside the book. It is only on this phone and can be added later from the letter page.

Product lead [ok]

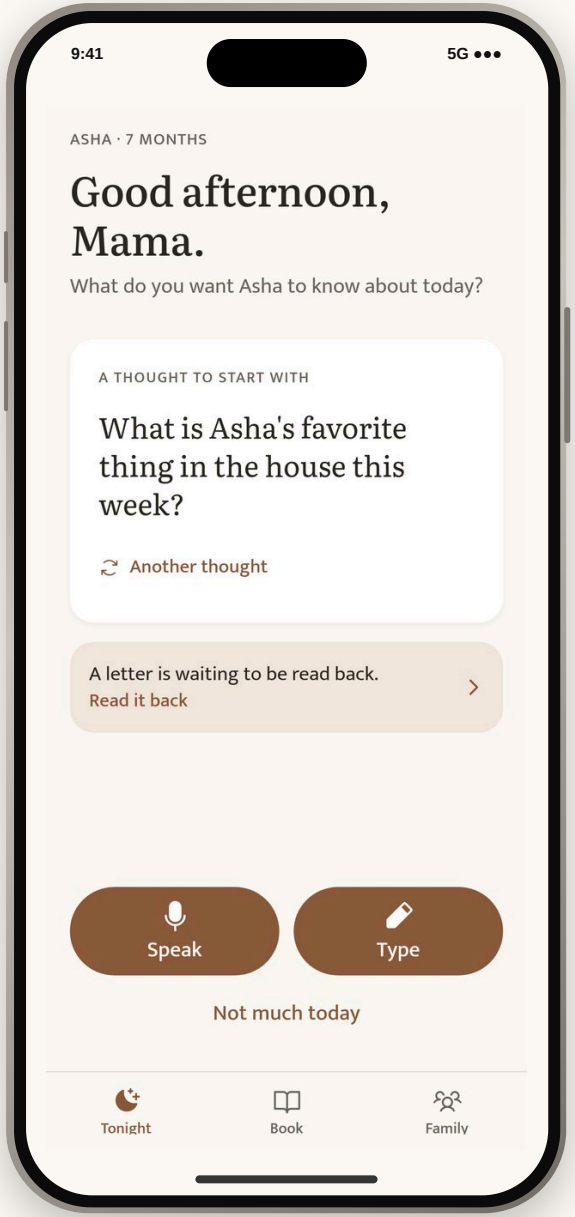

No findings

Design lead [ok]

No findings

Quality engineer [ok]

No findings

Close without saving

unhappy path

Closing leaves the draft where it was: the "A letter is waiting to be read back" card is still on Tonight. Nothing is deleted. ("Let it go", the only delete, is a native confirm dialog that does not appear on web.)

Product lead [ok]

No findings

Design lead [ok]

No findings

Quality engineer [fix]

MAJOR Close keeps the draft (good for durability) but there is no way to discard a draft after Finish: "Let it go" exists only on the Listening screen. A mistaken or private recording sits on Tonight as "waiting to be read back" forever and its audio stays on the phone and in the iCloud backup.
Fix: Add "Let it go" (confirmed) on Review and Tonight. Test: discard deletes row and file, only after confirm; kill during discard is safe.

Review with no draft

unhappy path

If Review is opened with a draft that no longer exists (only reachable by a stale link) the app says the words are safe and offers Close. It is not reachable by tapping.

Product lead [ok]

No findings

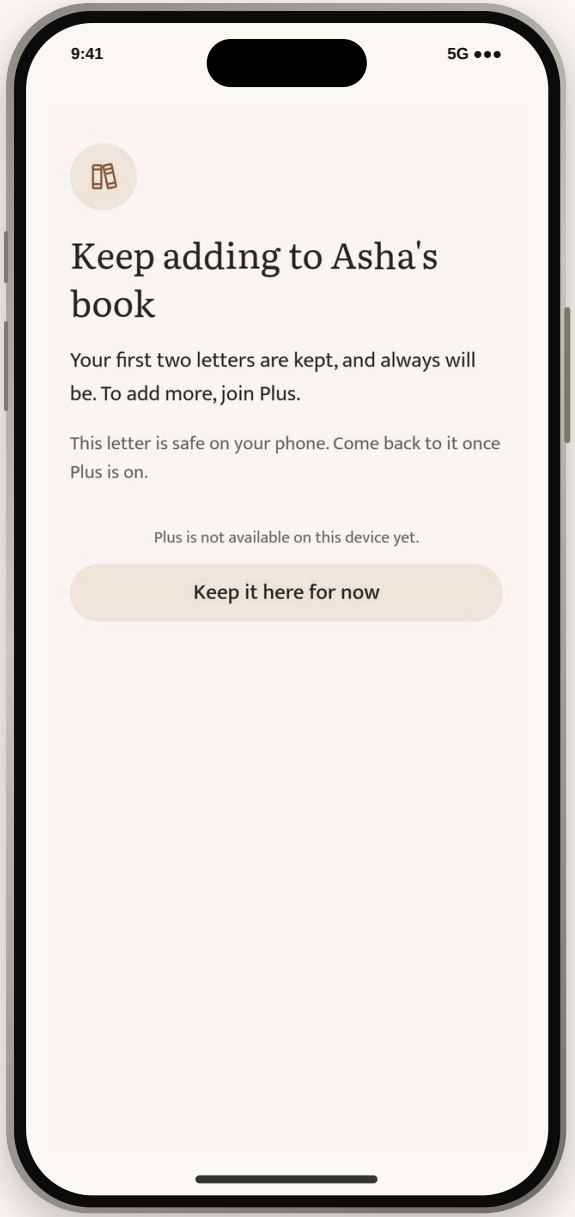

Design lead [fix]

MAJOR Error state is two lines of centred 16 pt text and a small content-width Close on an empty page: no heading, no art, and it says 'Please try again' with no retry action. It is a third pattern for the same job as J10-11 and J11-07.

Fix: Use EmptyState (title, body 'Your words are safe.', full-width bottom Close).

Quality engineer [ok]

No findings

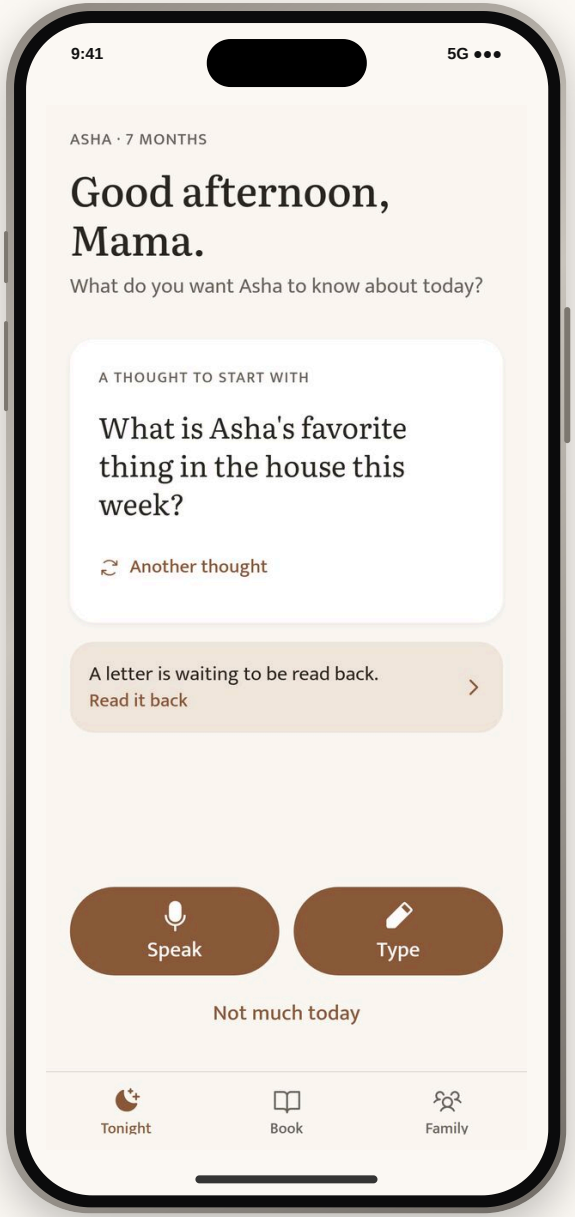

Keep needs Plus

unhappy path

Pressing Keep after the first two letters opens one calm sheet: "Keep adding to Asha's book", that the first two letters are kept and always will be, that this letter is safe on the phone, and a way to start Plus. No price, no trial length and no countdown (Apple's own sheet shows those). Nothing was saved yet. On web there is no StoreKit, so the sheet says Plus is not available on this device and has no "See Plus" or "Redeem a code" button. NEEDS A REAL IPHONE: See Plus, Redeem a code, Ask to Buy, offline.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

Kept here for now

happy path

The letter stays a draft: Tonight still shows "A letter is waiting to be read back" with the words exactly as they were. It can be played, read and exported from there, and kept once Plus is on.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J06-14

Write, empty

happy path

A page, not a form: the child's name and age, the prompt as a quiet line, and a blank letter. Save is off until something is typed.

Product lead [ok]

No findings

Design lead [fix]

MAJOR The primary button is labelled 'Save' but it does not save to the book: it opens Review (J07-03), where 'Add to Asha's book' is the actual save, while autosave already says 'Saved on this phone'. Label and outcome disagree.
Fix: Label it 'Read it back' (the Review title), keep it disabled until text exists.

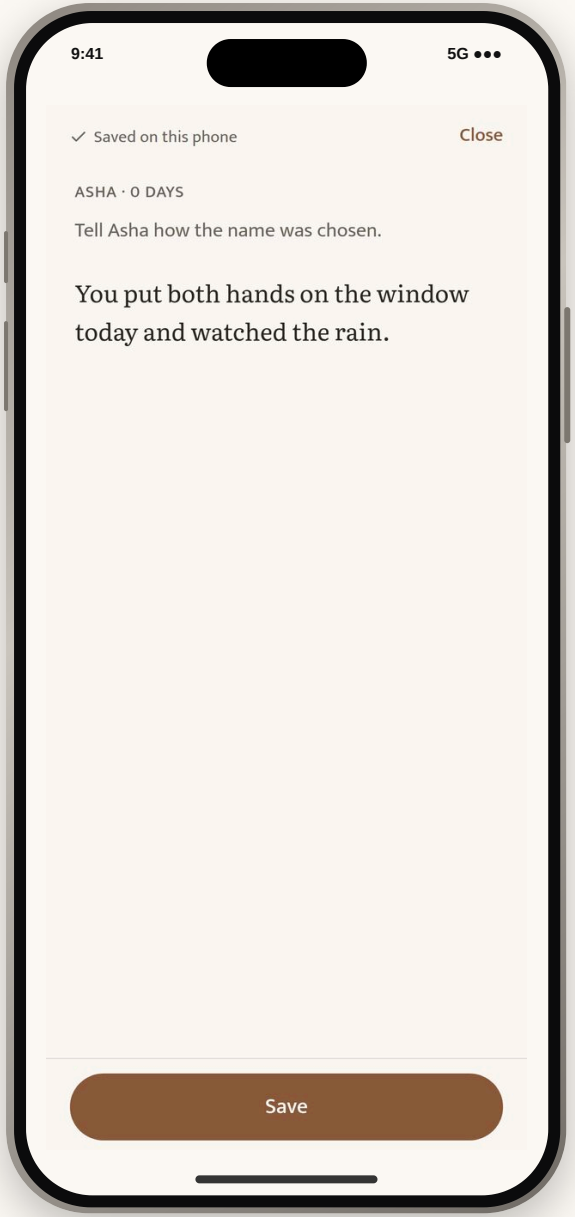

MINOR The ghost 'Dear Asha,' in muted serif at letter size is hard to tell from typed text, and it is a machine-suggested opening. Confirm it is placeholder only (not a value) and acceptable under the no-machine-words rule.
Fix: Placeholder with textMuted at 70 percent weight and an italic style, or drop it; product to confirm.

MINOR Header 'Close' at x=20 and body/dateline at x=24: a 4 pt misalignment between header and reading gutter; the page has no title.
Fix: Use space[5] for both header and body in the Write view.

MINOR Keyboard avoidance for the pinned Save cannot be seen on web.
Fix: QA on device with keyboard, hardware keyboard and Dynamic Type AX3.

Quality engineer [gap]

MINOR No maxLength on the typed letter. A multi-hundred-thousand character paste is accepted and stored; the server limit (20,000 chars, per TDD 06) would later reject it when sync turns on.
Fix: Cap at a generous limit with a calm message. Test: 100k paste handled without jank.

Typing, autosaved

happy path

After a pause "Saved on this phone" appears. Every pause saves a local draft, so a closed sheet or a crash loses nothing.

Product lead [fix]

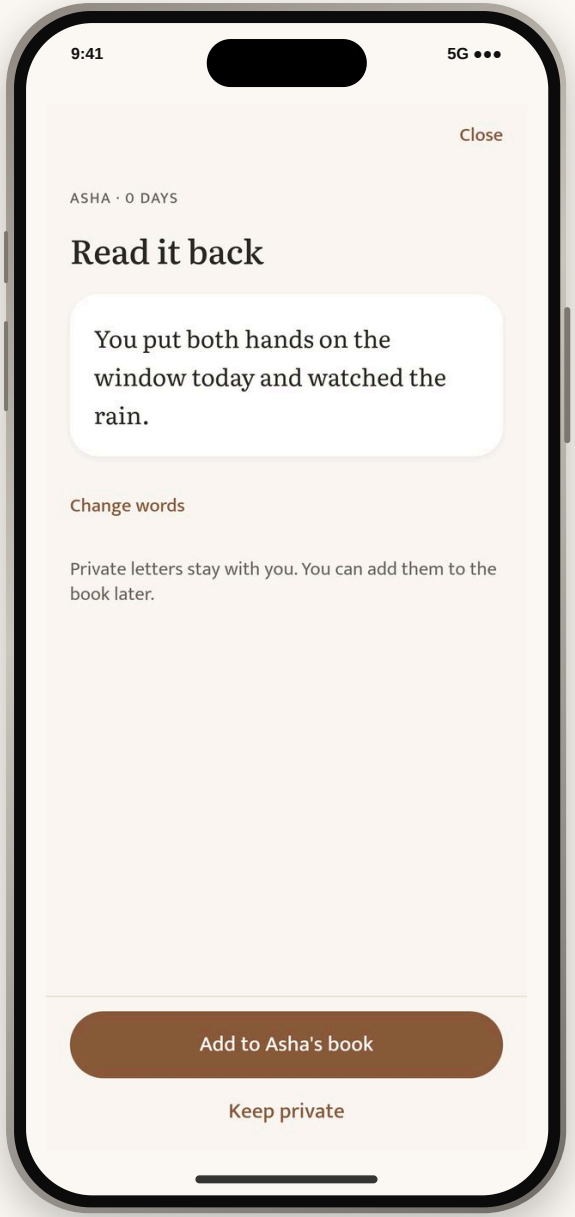

MINOR 'Saved on this phone' (autosave) and a 'Save' button mean two different things on the same page. A parent may think 'Save' is redundant, or fear their words are not saved until they tap it.
Fix: Rename the button 'Next' or 'Read it back', since the next screen is the read-back, and keep the autosave line.

Design lead [ok]

No findings

Quality engineer [fix]

MAJOR Autosave is a 500 ms trailing debounce with no max wait and no AppState flush (write.tsx:73). If the app is suspended or killed mid-typing, up to the last unsaved burst is lost. persist() runs inside setTimeout with no try/catch: a SQLite error (disk full) throws uncaught, which is fatal in release, and the typed letter in memory is lost entirely.
Fix: Flush on AppState background, add a 3 s max wait, catch errors and show "could not save, copy your text". Tests: unit test for debounce flush; failing setDraftTyped does not crash.

Review a typed letter

happy path

Typed words are kept exactly as typed: no tidying, no list of changes, no "does this sound like you". The person chooses where it goes.

Product lead [fix]

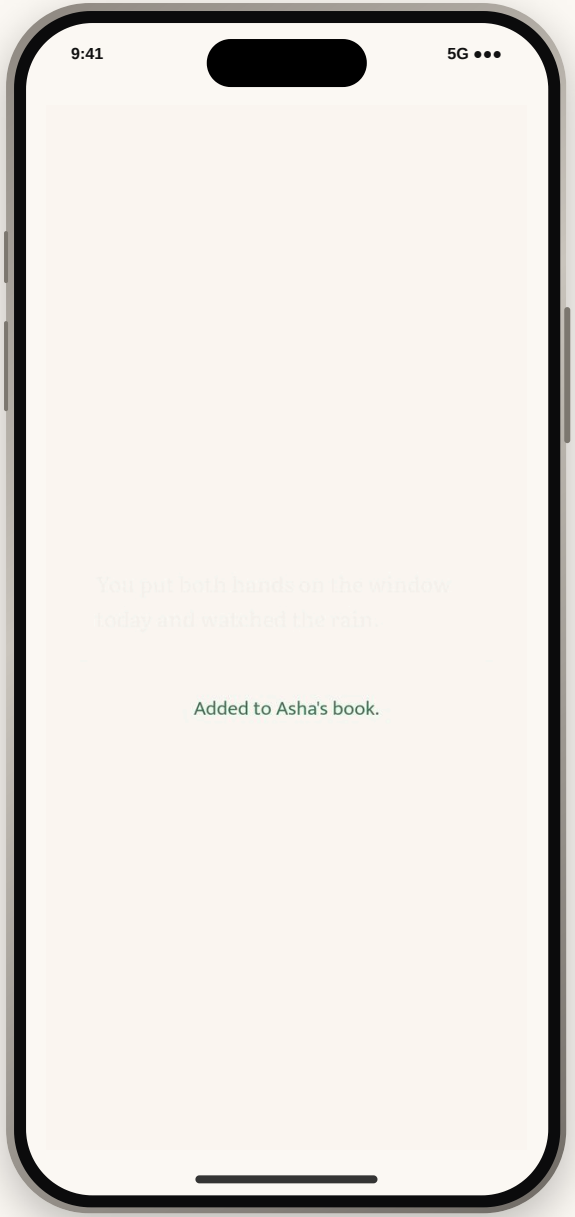

> **MINOR** For a typed letter, the person has just read their own words, then lands on a Read it back page to choose Add or Keep private. It is an extra screen at the end of a one-handed evening.
> Fix: Offer the choice on the Write page itself (Add to book, Keep private) and skip the read-back for typed letters.

Design lead [fix]

> **MINOR** The explanation 'Private letters stay with you...' sits about 300 pt above the Keep private button it explains.
> Fix: Move it under the footer buttons as caption, or into the button subtitle.

Quality engineer [ok]

No findings

Saved to the book

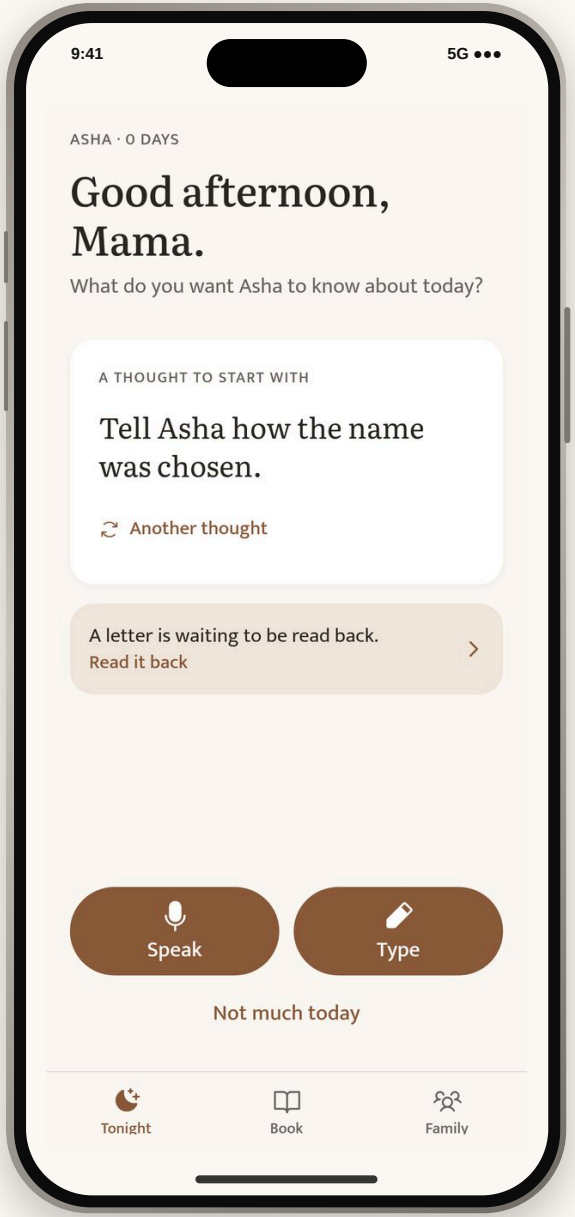

happy path

The letter settles into a card with a confirmation, then Review closes on its own after a moment (or on tap).

Product lead [ok]
No findings

Design lead [ok]
No findings

Quality engineer [ok]
No findings

Closed before finishing

unhappy path

Closing keeps the words as a draft. Tonight now shows a quiet card to pick the letter back up.

Product lead [fix]

MINOR After a letter is kept, Tonight looks exactly as before: same prompt, same Speak and Type, as if nothing happened. That reads as another invitation to write, which is mild nagging, and gives no calm sense of 'done for tonight'.
Fix: Show a settled state: 'Tonight's letter is in Asha's book.' with a quiet 'Add another' link.

Design lead [fix]

MAJOR After a first letter is saved the person returns to a Tonight screen that looks identical to before (same prompt, same Speak/Type); nothing says today's letter exists. 'Celebrate what exists' and closure are missing at the highest-emotion moment, with no streak allowed.
Fix: Swap the prompt card for a quiet card 'Today's letter is in Asha's book' with a 'Read it' link (and Speak/Type kept); no count.

Quality engineer [ok]

A day with little to say

happy path

Under Speak and Type sits a quiet link: "Not much today". Its hint says "Marks today without writing anything."

Product lead [ok]

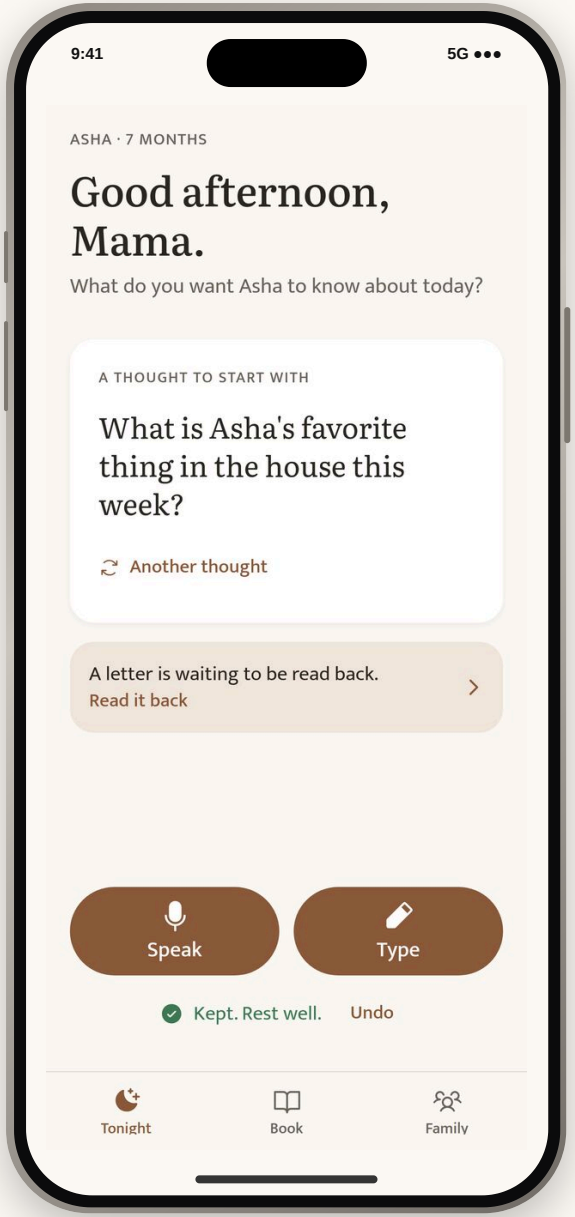

No findings

Design lead [ok]

No findings

Quality engineer [ok]

No findings

Kept, with no guilt

happy path

One line of warmth and an Undo replace the link. The app stores a mark for the day with no words at all: it never writes a sentence for the person. The mark is not counted as a letter.

Product lead [fix]

BLOCKER 'Not much today' makes the app write a sentence in the parent's voice and keep it as their letter ('Sunday. Not much today. Just Asha, and us, and an ordinary day.', from `notMuch.template` in packages/content/src/strings.en.ts, with alternates such as 'Tired tonight. Loved {child} all day anyway.'). The constitution says no feature may write words for a person, and VOICE.md says never imply AI writes anything. The line is stored and then displayed as 'From Mama' in the Book (J08-03). The step note says the line 'never appears in the book', which the screenshots contradict.
Fix: Do not generate words. Store a bare marker ('a quiet day') that shows only a date and a small dot in the Book, with no sentence and no signature, or offer 'Add a few words' as the only way text exists. Keep 'Kept. Rest well.' as the confirmation.

Design lead [ok]

No findings

Quality engineer [gap]

MINOR The "Not much today" line is a system template stored as an entry with raw_transcript and final_text set to machine text (index.tsx:95 keepNotMuch), which exports as a typed note. Tapping again after returning to Tonight adds another note the same day. It is not the person's words but the schema presents it as such.
Fix: Store notes with an explicit system_generated flag or no raw text, de-duplicate per day. Test: export marks it and one per day.

A quiet day in the Book

happy path

The Book shows one small row, "A quiet day", with the date: muted, unsigned, not a card and not a button into a letter. It is never counted, printed or read in Read together, and it hides on any day that has a letter.

Product lead [fix]

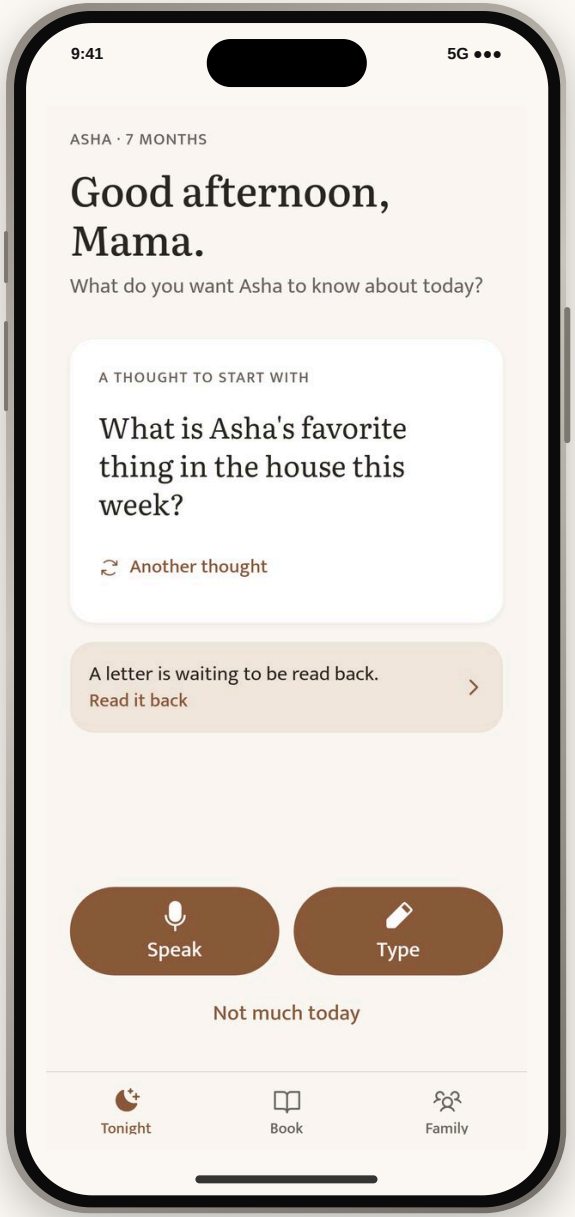

BLOCKER The Book shows a card in 'Month 7, 1 note' with machine-written first-person text and a Private chip (I looked at the screenshot). This puts words the person never said into the book that is exported and read to the child. It also contradicts the step note ('not in the Book'), and 'Celebrate what exists' is fine but a 'notes' count introduces a second thing to count.
Fix: As J08-02: no generated sentence. Show a quiet marker or nothing. Decide whether markers count toward the free letters (D-051, a 'letter' is a saved spoken or typed entry; a marker is not).

Design lead [fix]

MAJOR The quiet-day note shows in the Book as a letter-style card: 'Sunday. Not much today. Just Asha, and us, and an ordinary day.' signed 'From Mama' with a Private chip, counted as '1 note - From Mama'. The app wrote those words and presents them as the parent's, in the same card as a real letter. This conflicts with the constitution ('no feature may write a person's words').
Fix: Show it as app voice: no signature, different treatment (muted Mukta italic on `surface`, label 'A quiet day'), or keep it out of the Book. Product and content to decide; if kept, never first person.

Quality engineer [ok]

No findings

Undo on the kept line

unhappy path

Undo takes the mark back at once: the quiet link returns and nothing is left behind.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

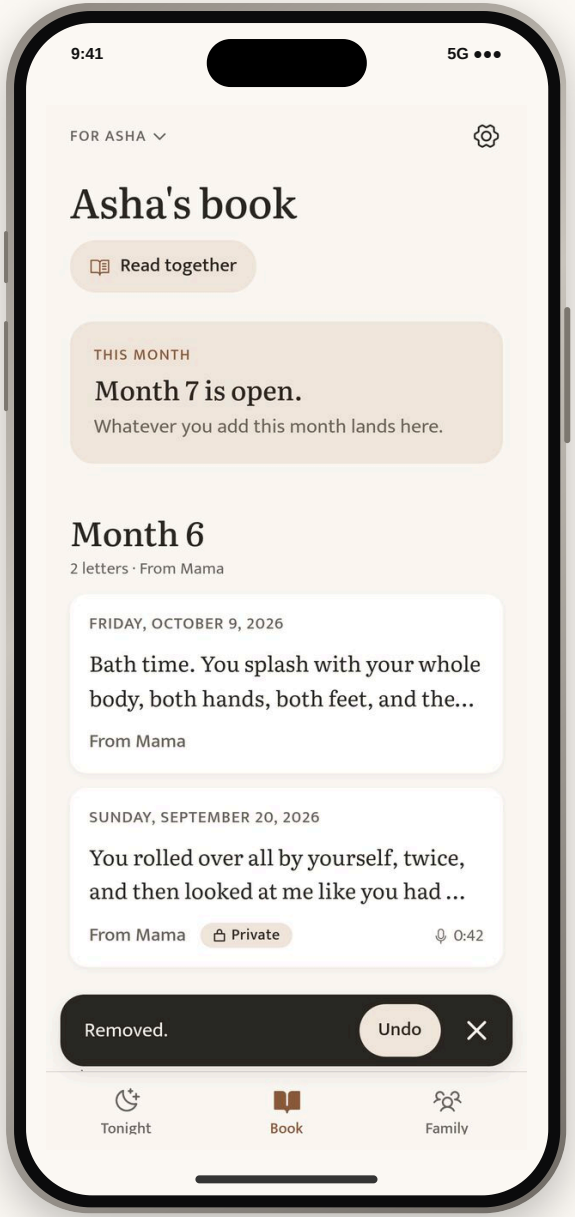

An older quiet day, shown as a mark

happy path

A "Not much today" saved by an older build holds a template sentence in the old row. The Book ignores that text and shows the same small "A quiet day" row; on a day that already has a letter no mark is listed. Counts say letters only. (Seeded fictional family Asha, with older-build rows.)

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

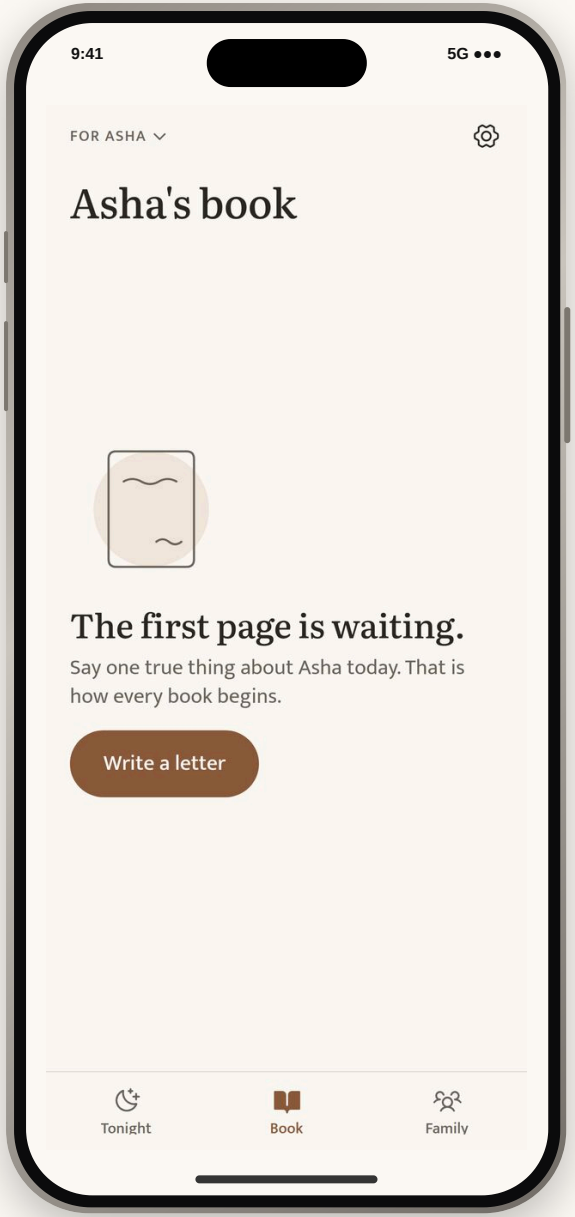

Remove this mark, with Undo

unhappy path

Long-press (or the VoiceOver action "Remove this mark") removes the mark and shows "Removed." with Undo, which stays until tapped or closed.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J08-05

An empty book

happy path

One drawing, one plain sentence, one action: "Write a letter". No counts, no gaps, nothing to fill in.

Product lead [ok]

No findings

Design lead [fix]

> **MAJOR** 'Write a letter' is a content-width button left-aligned at y about 550 of 874, out of the bottom-third thumb zone and unlike every other primary (full width, pinned). The art sits 16 pt inside the text edge.
> Fix: Pin it to the bottom above the tab bar at 56 pt full width (or make it the EmptyState action with align=start and size=lg).

Quality engineer [ok]

No findings

One letter

happy path

The first letter sits under its month chapter. Read together appears once there is at least one letter in the book.

Product lead [ok]

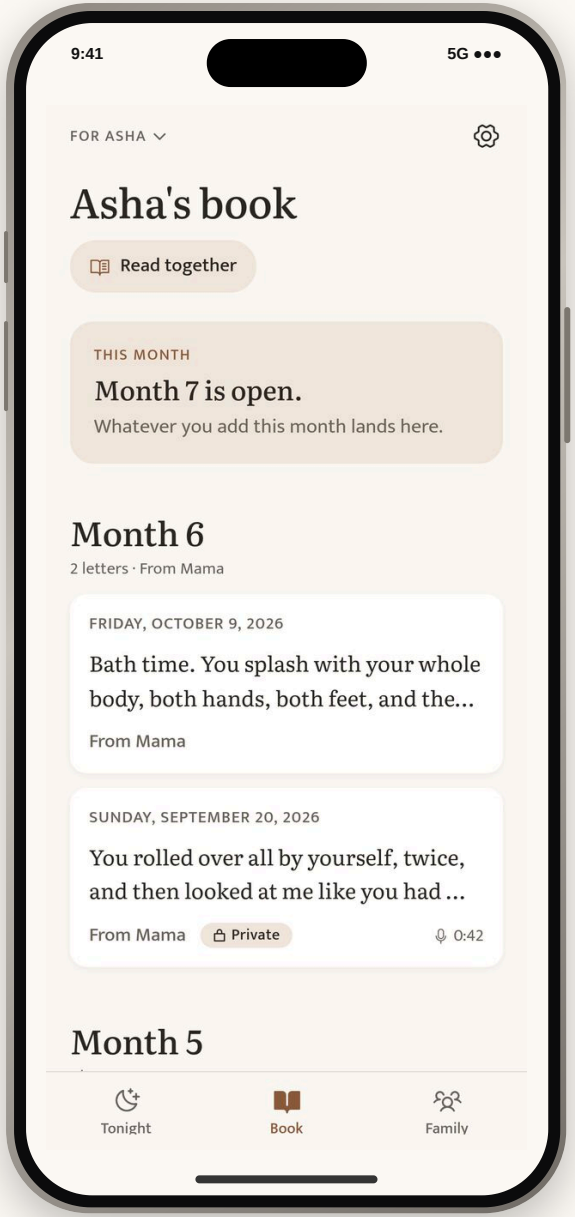

No findings

Design lead [ok]

No findings

Quality engineer [ok]

No findings

Many letters, by month

happy path

Chapters by month of age, newest first. Each card shows the first words, the signature and a recording length. A private letter carries a "Private" mark. (Seeded fictional family Asha.) Full length capture shows every chapter.

Product lead [ok]

No findings

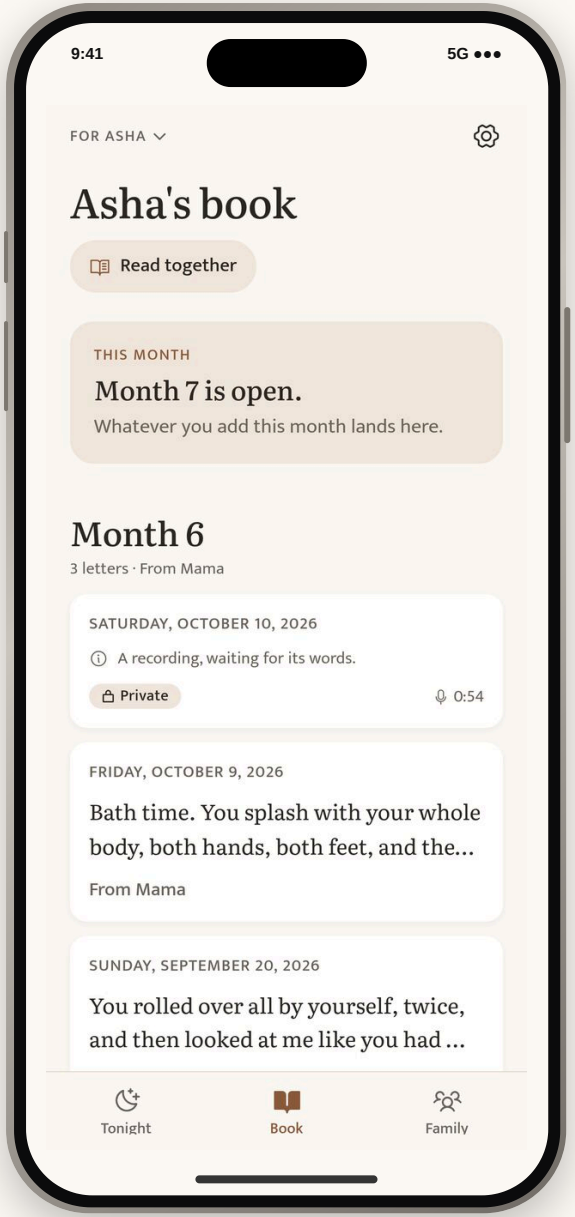

Design lead [fix]

MINOR 'This month: Month 7 is open.' takes about 120 pt of the first screen for a placeholder with no action; it edges toward marking a gap.
Fix: Make it the entry to Write (one tap) or reduce to a one-line row.

MINOR Voice letters show only a 13 pt mic glyph and duration at the far right; DESIGN_LANGUAGE principle 1 asks for a play affordance on every letter. 'From Mama' repeats on every card and chapter.
Fix: 44 pt play glyph on voice cards; show the author only when more than one writer exists.

Quality engineer [gap]

MINOR The Book loads every entry of the child (SELECT *, JSON.parse of machine_edits) on mount, on every store change, and again on focus to count letters (book.tsx useFocusEffect), and renders them in one SectionList with no paging. Budget "chapter of 60 letters p95 500 ms" has no test and 1,800 letters has no fixture.
Fix: Count with SQL, page by chapter, and add a perf test with a 5-year Asha fixture. Measure scroll on SE 3.

A voice-only letter waiting for words

unhappy path

A kept recording whose words have not been written yet shows a calm note on its card instead of text. Nothing is lost; the recording is on the phone.

Product lead [gap]

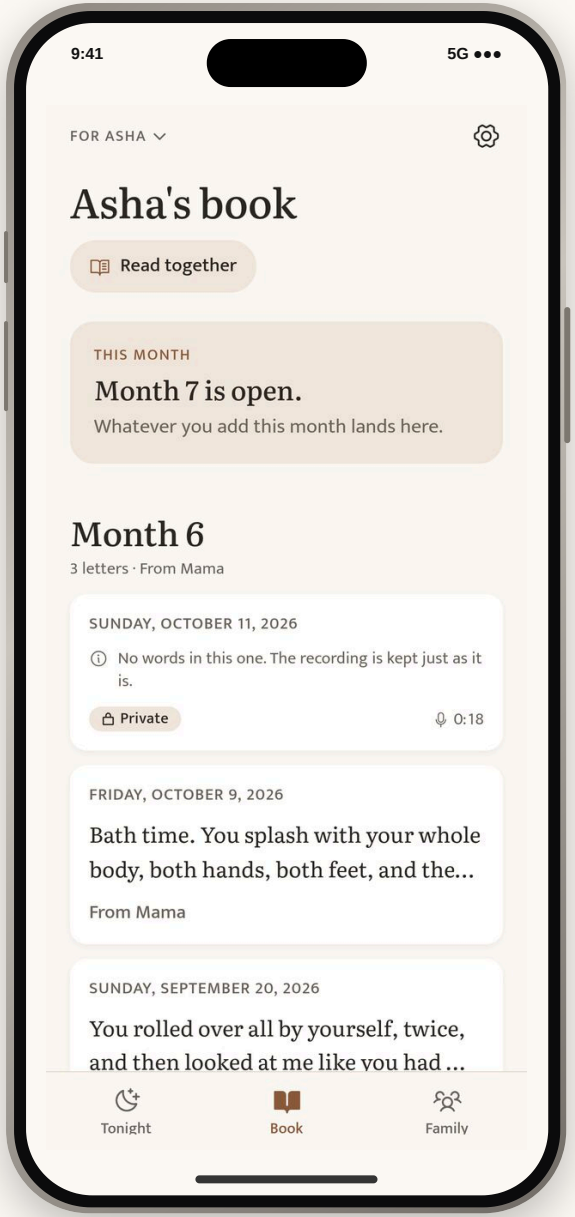

MAJOR A kept recording with no words shows 'A recording, waiting for its words.' with no action. The parent cannot type the words, retry, or learn why (the model may not be on the phone, J14-01). Voice-only letters can pile up with no way forward.
Fix: Make the card tappable to a 'Write the words yourself' option and a 'Try again' (or 'Download English') action; say why in one line.

Design lead [ok]

No findings

Quality engineer [gap]

MINOR See J10-09: when words arrive in the background they are set without review.
Fix: See J10-09.

A recording with no words

unhappy path

A kept recording that came back with no words shows the app's own small note, "No words in this one. The recording is kept just as it is.", muted sans with a small icon: not in the letter's type and with no "From ..." signature under it. The recording may hold laughing or babble, so the note never says nobody spoke. It counts as a letter once kept.

Product lead [fix]

> **MINOR** 'A quiet recording. Nobody spoke' could equally be a microphone fault, and the card offers no quick way to remove a mistaken take from the Book.
> Fix: Add a swipe or sheet action 'Let it go' with a confirm, and keep the calm note.

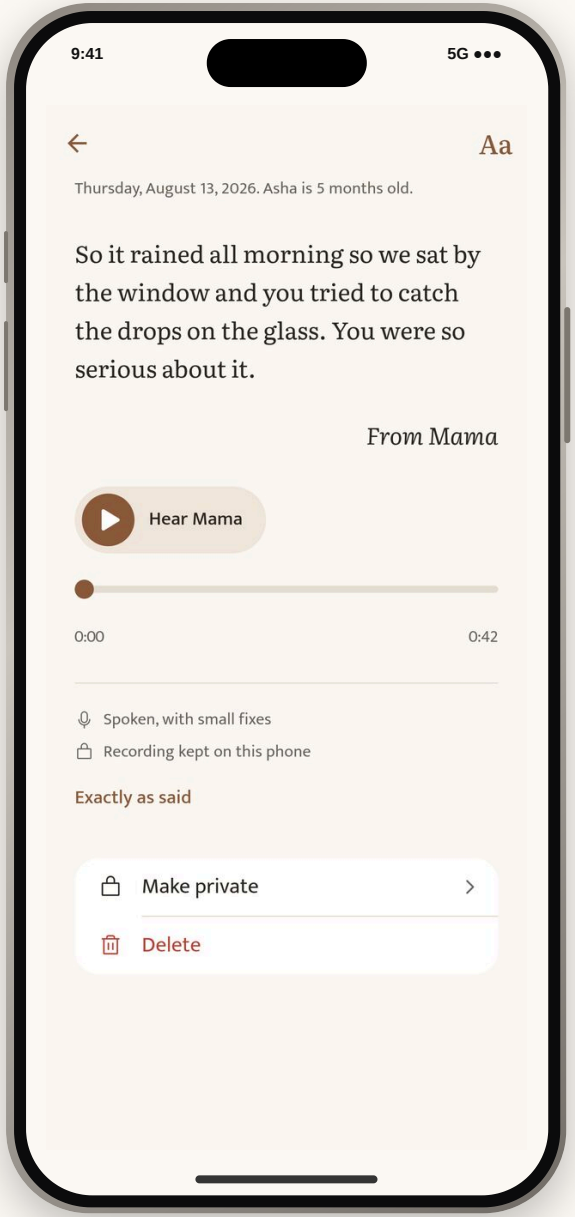

Design lead [ok]

No findings

Quality engineer [gap]

> **MINOR** "Nobody spoke" is final: there is no Try again on the letter page, although a quiet voice or a baby sound may have been judged silence by VAD. The recording is kept.
> Fix: Offer "Try writing it down again" on no-speech letters. Test: retry re-enqueues and sets words once.

From J09-03

A letter, as a page

happy path

The words large in the letter face, signed "From Mama", with the recording player, how it was made, "Recording on this phone", and the actions below. (Seeded fictional family Asha; the seeded audio files do not exist, so the player is the closest honest state, see the note on the next step.)

Product lead [fix]

MAJOR The letter page ('Spoken, lightly tidied') uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

MAJOR Delete sits one row under 'Make private', is red, and is immediate with no confirm (J10-06). Saved letters and voices are the thing this product exists to keep; the unsaved take has a confirm ('Let it go') but the saved letter does not. One-handed at night this is a real mis-tap risk. Undo disappears when the person leaves the page.
Fix: Confirm sheet: 'Delete this letter? The recording goes with it.' with 'Keep it' as the default, plus a 'Recently deleted' holding area for 30 days.

MINOR 'Recording kept on this phone' omits the iPhone backup half of the D-033 sentence.
Fix: 'Recording kept on this phone and in your iPhone's backup, if you use one.'

Design lead [fix]

MAJOR The dateline 'Tuesday, August 4, 2026. Asha is 5 months old.' is 13 pt sentence-case muted, only about 6 pt under the header row, and unrelated to the letterDateline style (12-14 pt caps, +0.6 tracking) used on Book cards and Review. The key context of a keepsake is the smallest, least consistent text on the page.
Fix: tokens.type.letterDateline with space[4] under the header; same component everywhere.

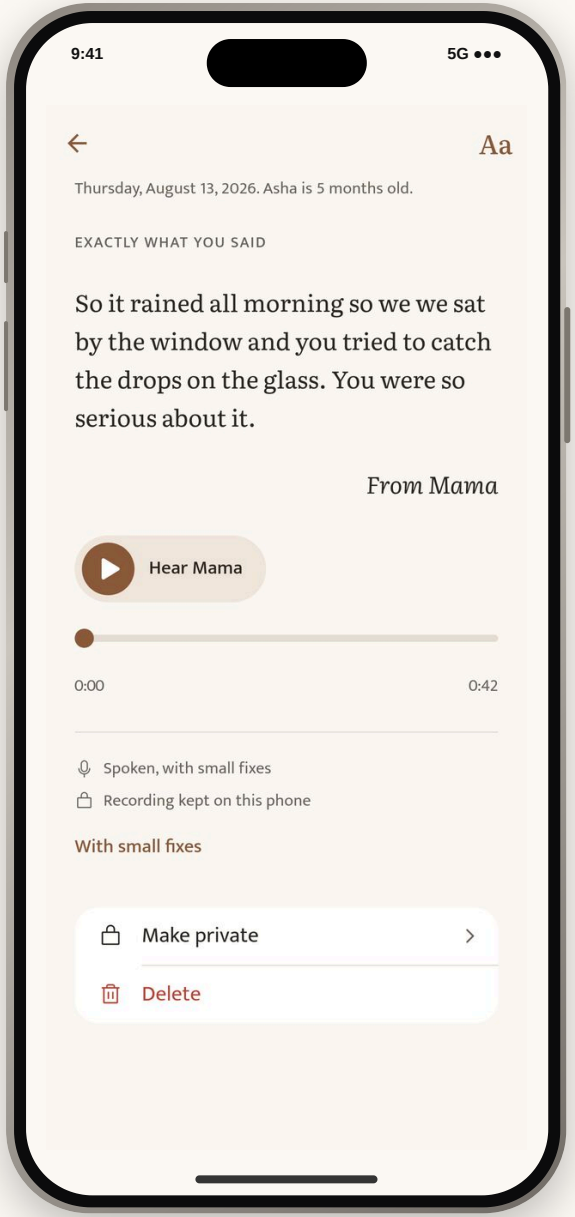

MINOR The 'Aa' control is an unlabelled serif glyph about 20 pt; the back control is a Material-style arrow. Cannot confirm accessibility labels from the captures.
Fix: IconButton label 'Reading size' with 44 pt target; QA VoiceOver names for Aa, back, Hear Mama and the scrubber (role adjustable).

MINOR The scrubber track (accentSoft on paper, 1.16:1) carries no position cue other than the thumb.
Fix: Track in `line`/controlBorder at 3:1 or add the elapsed fill in accent.

MINOR No brand device on the most important page in the app. The opening-quote pair above the first line would match 'these are your exact words'.
Fix: Small quote pair (registry mark) above the body, 24 pt, accent, static.

Quality engineer [gap]

MINOR The letter page reads the entry once (useState(getEntry)) and does not subscribe to the store, so a waiting letter does not update when words arrive until reopened. "Recording on this phone" is shown for every spoken letter even when the file is missing (the capture shows both that line and "not on this phone").
Fix: Subscribe to the store; show the recording line from availabilityOf. Test: letter page updates on setWordsForWaitingEntry; missing file hides the line.

Exactly as said

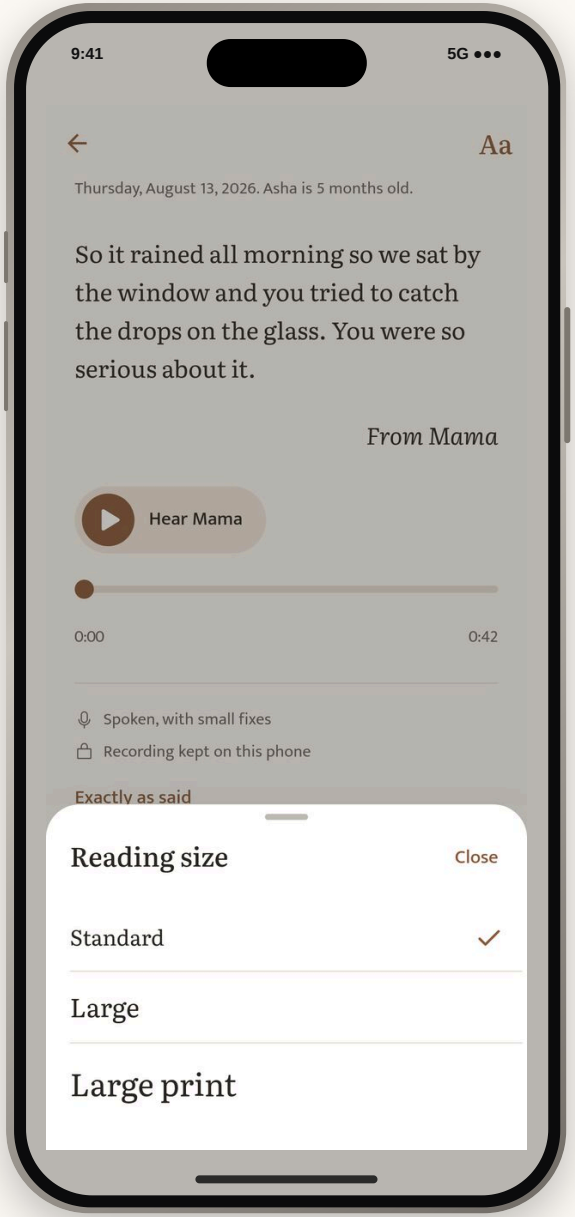

happy path

The raw words replace the fixed ones, under an "Exactly what you said" label.

Reading size sheet

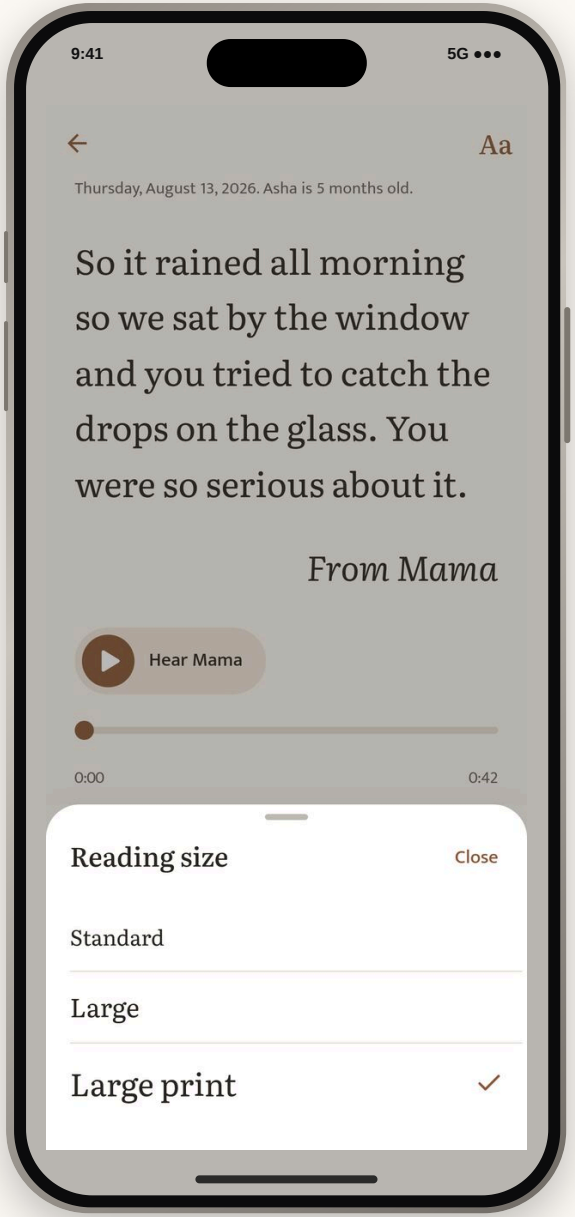

happy path

A small "Aa" sheet changes the letter size live behind it: Standard, Large, Large print.

Product lead [ok]
No findings

Design lead [ok]
No findings

Quality engineer [ok]
No findings

Large print

happy path

The page re-sets at the largest size, cross-fading rather than animating the size.

Product lead [ok]

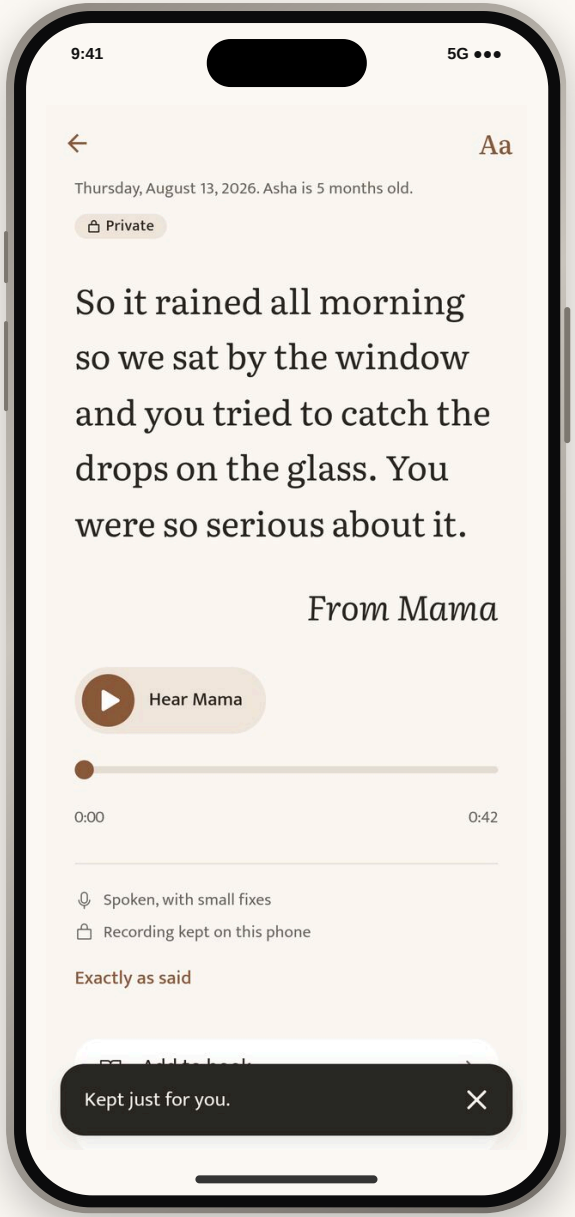

No findings

Design lead [fix]

MAJOR Large print scales the letter only: dateline, 'Private' chip, time labels, provenance and 'Show exactly what I said' stay 13-14 pt, so the grandparent audience still meets tiny metadata. Ragged lines also leave 'You' alone at a line end.
Fix: Scale dateline, player times and links by tokens.readingScale; add text-wrap balance for body.

Quality engineer [gap]

MINOR Large print and every other reading size could only be seen at 402 px with the text-size setting inside the app; iOS Dynamic Type up to AX5 (LEGAL-REQ-051, A-NFR-005) was not observed, and no automated AX5 check exists in CI.
Fix: Add AX5 screenshots to E2E-15 and a manual VoiceOver pass per DEVICE_TEST_PLAN.

Make private

happy path

The letter leaves the book; a "Private" mark and a toast confirm it. Moving it back is one tap.

Product lead [ok]

No findings

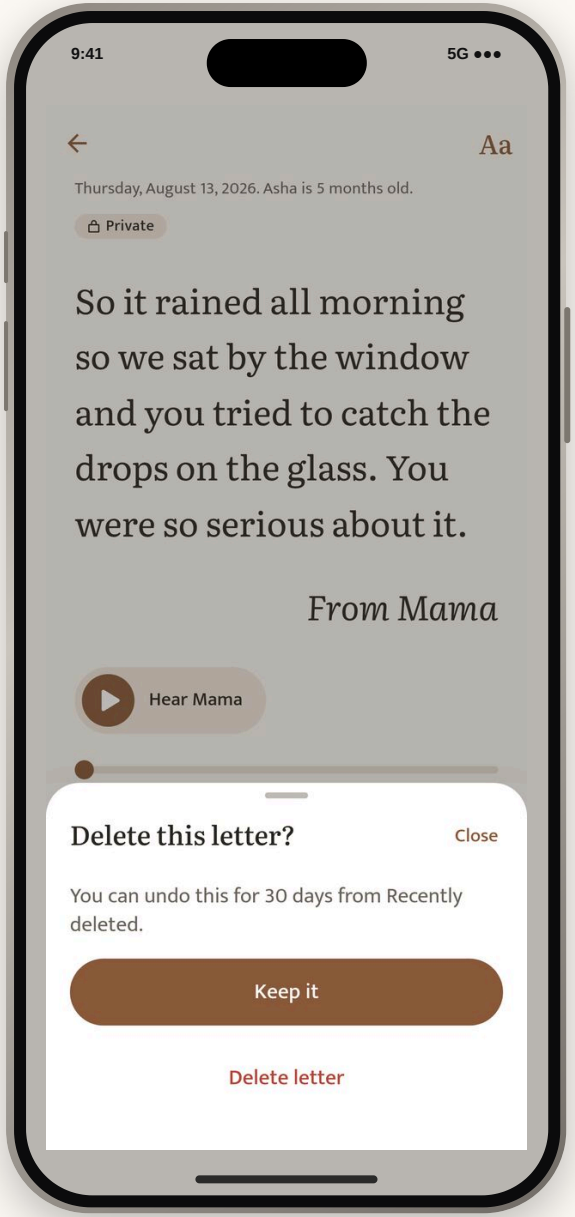

Design lead [fix]

> **MINOR** The confirmation toast is a near-black ink pill with a white X; against warm paper it is the loudest object on the page, and it covers the 'Add to book' and 'Delete' rows. Inserting the Private chip pushes the body down 20 pt.
> Fix: Toast on surfaceRaised with elevation 2 and `line` border; reserve the chip row; verify toastBottomOffset clears the 34 pt home indicator.

Quality engineer [ok]

No findings

From J10-04

Delete asks first

unhappy path

Delete opens a small sheet: "Delete this letter?", "You can undo this for 30 days from Recently deleted." The safe choice, "Keep it", is the large primary button and the default; "Delete letter" is the quiet red one. (D-085.)

Product lead [fix]

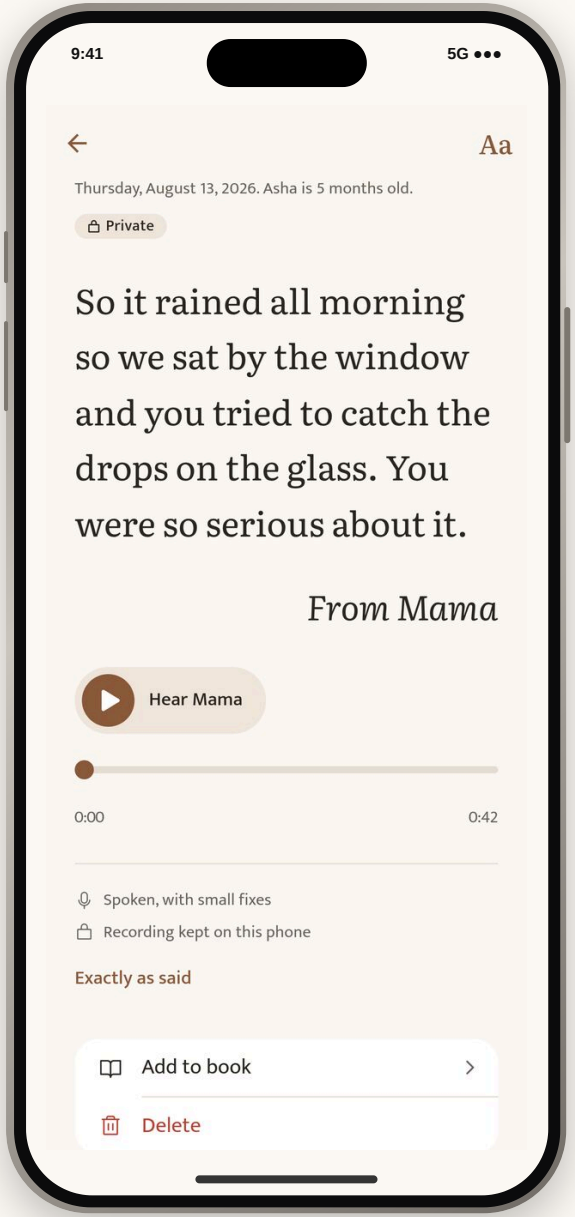

MAJOR Delete is immediate; Undo lasts only while the person stays on this page. A voice the family may not get again is gone once they tap Back or Close. The 'You can still undo this' copy is kind but the safety net is thin.
Fix: Add the confirm and a 30 day Recently deleted list (see J10-01).

Design lead [fix]

MAJOR Delete is immediate and the page that remains says 'Letter deleted.' with no Undo on the page; Undo lives only in a toast pill at the bottom edge, and Back or swipe-back silently makes it permanent (voice recording included).
Fix: Put an outline 'Undo' Button full width under the message; make leaving by swipe explicit ('This is kept until you close'); consider a one-line confirm for letters with a recording.

Quality engineer [fix]

BLOCKER Delete is immediate and Undo exists only while the person stays on this screen (letter/[id].tsx:143, store.ts:641 tombstone). Back, a swipe, a kill or the call ending removes the only way back: there is no "Recently deleted" screen (undeleteEntry is called only from this toast). The letter and its recording are still on the phone, but hidden from the Book, Read together and export (build.logic.ts:9). So an accidental delete is permanent to the person, and a deliberate delete is not honoured either: audio and text stay on disk and in the iCloud backup forever (no local purge).
Fix: Add a confirm or a Recently deleted list with 30-day restore and a real local purge (file plus row). Tests: delete, relaunch, restore from list; purge removes the file; E2E-08 extended; export includes or states deleted items.

Keep it

unhappy path

Choosing "Keep it" closes the sheet and changes nothing: the letter is still on its page.

From J10-07

Undo restores the letter

happy path

The letter is back exactly as it was.

Product lead [gap]

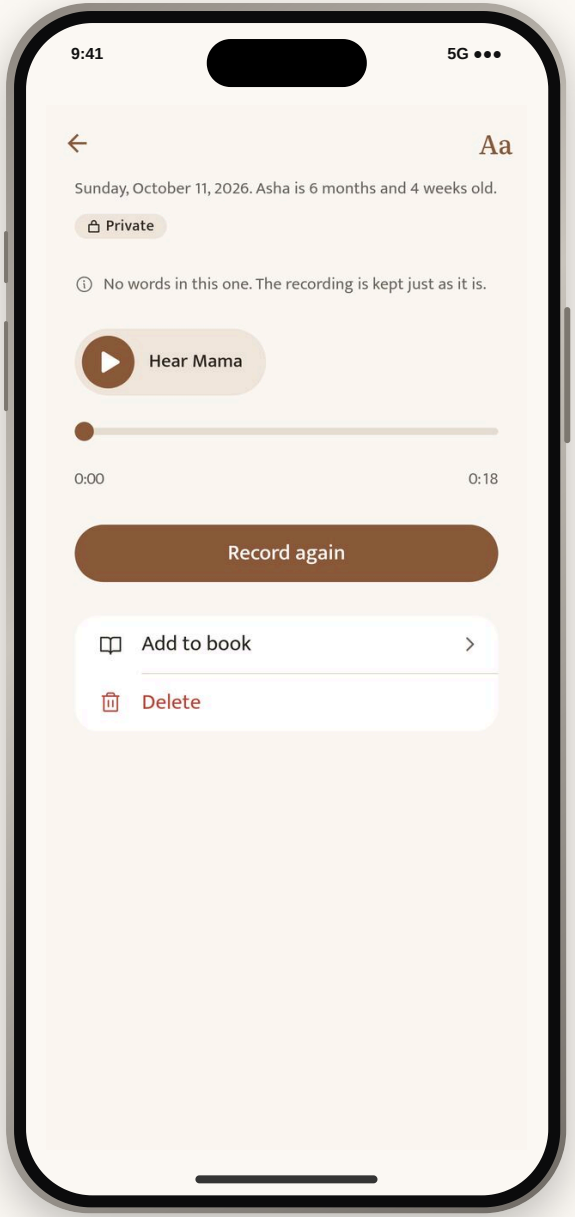

MAJOR A letter 'waiting for its words' is a dead end: the page offers only 'Add to book' and 'Delete'. The parent cannot add the words, retry, or see what to do. Adding it to the book also counts as a letter under D-051 with no words in it (see _journey).
Fix: Add 'Write the words' (typing under the recording) and 'Try again' actions; show a one-line reason.

Design lead [gap]

MAJOR A letter waiting for its words shows an italic note and Hear / Add to book / Delete, but no visible action to get the words (retry, wait, or type them). The person can be stuck with a note that never changes.
Fix: Add 'Write the words yourself' and 'Try again' rows (typed words are allowed), plus a status line.

Quality engineer [fix]

MAJOR Voice-only letters get their words in the background (setWordsForWaitingEntry) cleaned by the engine with no person reading them, and the letter page has no edit and no per-edit put-back (only "show exactly what I said"). That conflicts with the promise "read each letter and fix anything we got wrong" (J01-04) and with transcription mistakes on names. Transcription also only runs in the foreground (aborts on background, index.ts:145), so words may take a while to appear.
Fix: Mark such letters "words arrived, please read" and open them in Review; add edit on the letter page. Tests: words set once; review flag clears after read.

A recording with no words

unhappy path

The page shows the app's own small note instead of words, and no "From Mama" signature under it (the signature is only under words a person said); the recording is still there and can be kept.

Product lead [fix]

> **MINOR** A silent recording can be 'added to the book'; there is no 'Record again' and it would count as one of the 2 free letters under D-051.
> Fix: Offer 'Record again'; decide whether a no-speech take counts as a letter (founder, D-051 open edge).

Design lead [fix]

> **MINOR** The system sentence 'A quiet recording. Nobody spoke...' is signed 'From Mama', so app voice is presented as the parent's; 'Add to book' for an empty recording is offered at the same weight as Delete.
> Fix: Remove the signature on system notes; make Delete the lower-emphasis action.

Quality engineer [ok]

No findings

Letter not found

unhappy path

A letter that is not on this phone (a stale link) shows a plain title and one button back.

Product lead [ok]

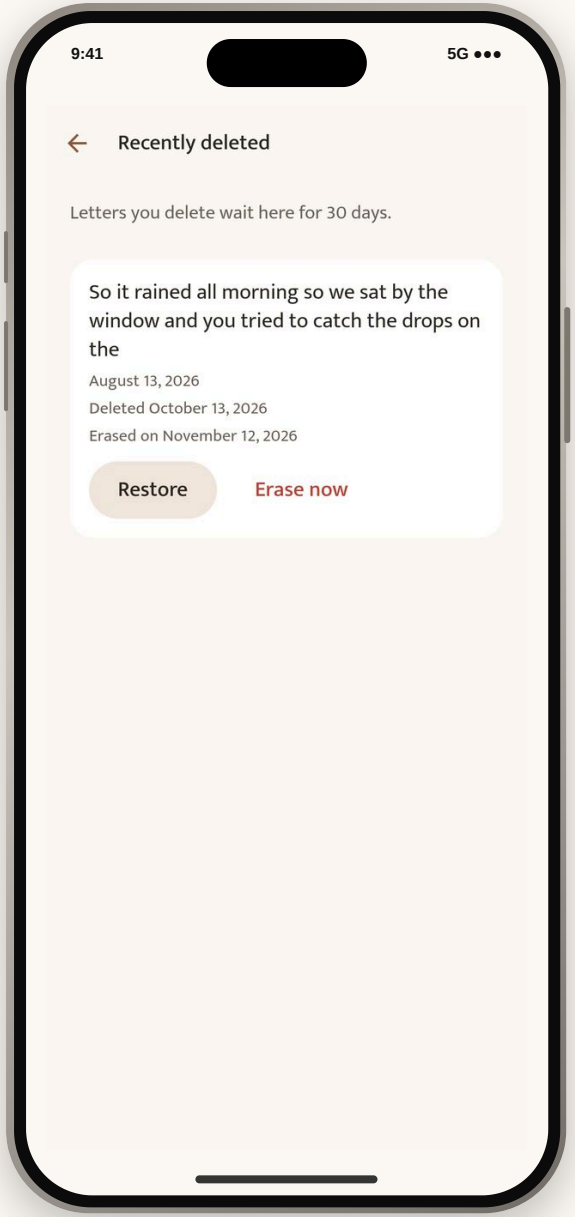

No findings

Design lead [fix]

> **MINOR** Plain heading and a content-width button, left-aligned, with only a back arrow: a fourth empty/error pattern.
> Fix: EmptyState with title, body, full-width action.

Quality engineer [ok]

No findings

Recently deleted

happy path

Settings, Recently deleted lists the letter with its first words, its date, the day it was deleted and "Erased on" the day the purge removes it (30 days on), with Restore and Erase now. No countdown and no count. (Seeded fictional family Asha.)

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J10-01

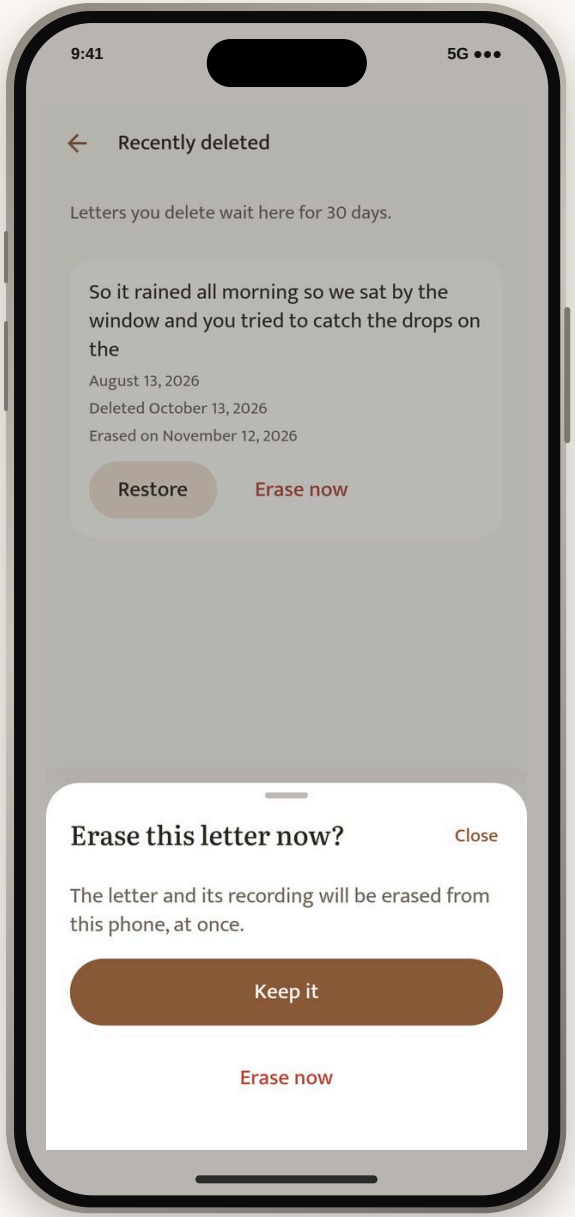

Restored

happy path

Restore puts the letter back in the book exactly as it was; a toast confirms and the shelf is empty again, with a calm note that deleted letters wait here for 30 days.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J10-12

Erase now asks first

unhappy path

Erase now ends the wait, after one question: "The letter and its recording will be erased from this phone, at once." "Keep it" is the default.

Product lead	Design lead	Quality engineer

From J10-13

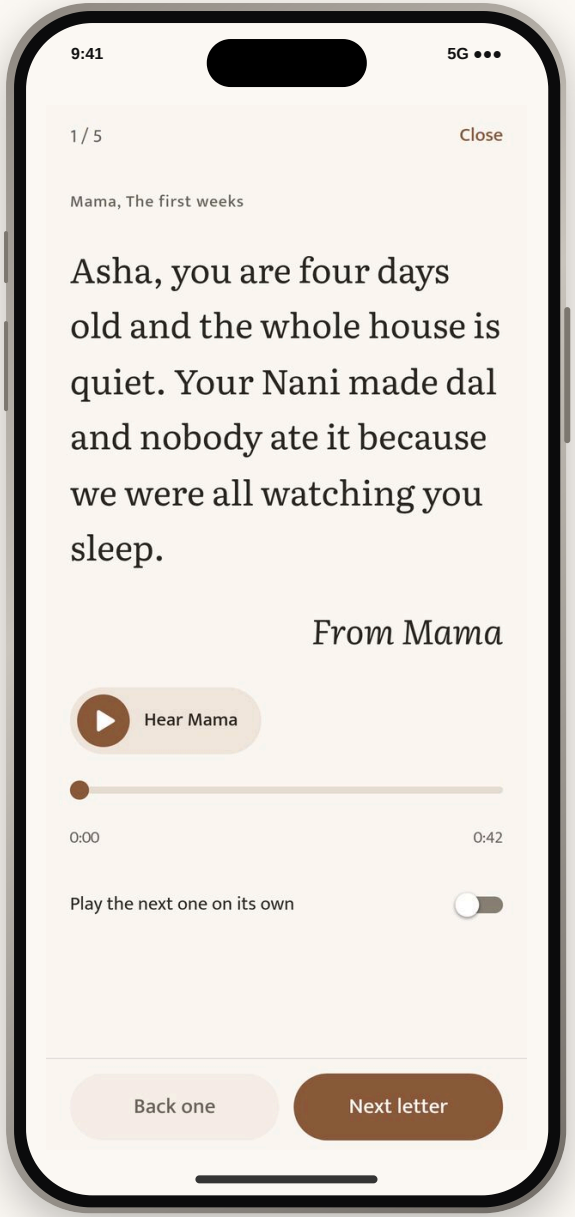

Erased

unhappy path

The letter and its recording are gone from this phone at once, and the shelf is empty. (On a phone the recording file is removed first, then the row; the web preview has no recording files.)

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J10-14

Read together, first letter

happy path

Chrome-free, Large Print by default: one letter at a time, oldest first, with a "Hear Mama" player for the recording on the phone. Read together is free for every letter that exists, with no session limit (D-082, D-083). (Seeded family Asha. Playback itself is native audio and is not exercised on web.)

Product lead [fix]

> **MINOR** The header 'Mama, The first weeks' reads as a stray comma and capital. One screen per letter, large print and Next at thumb height are right for bedtime.
> Fix: 'From Mama · The first weeks'.

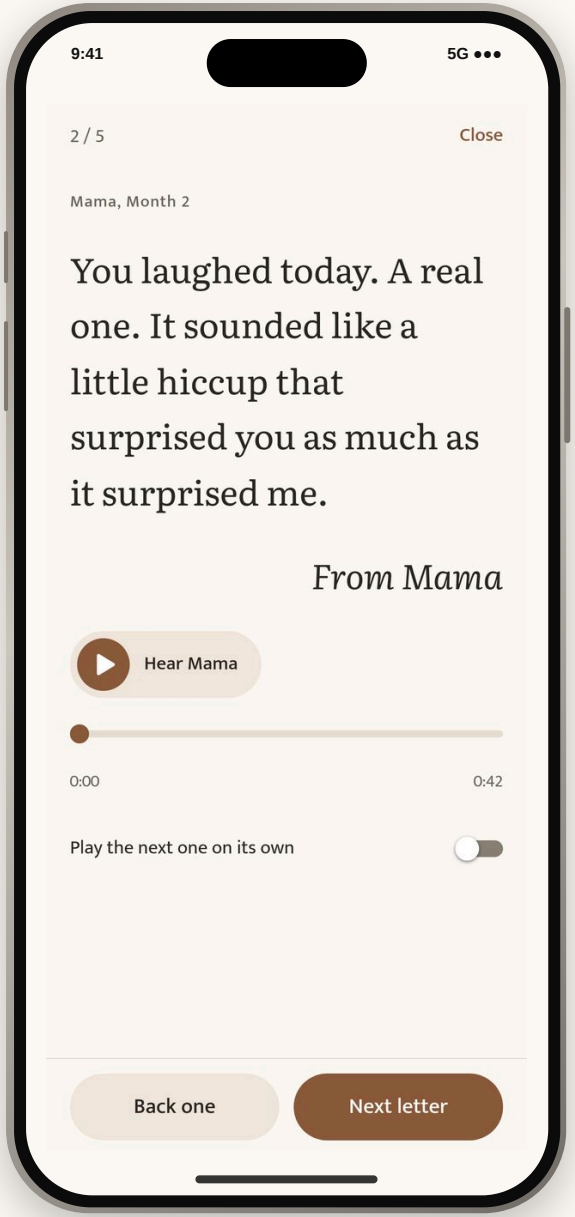

Design lead [fix]

> **MAJOR** The 'chrome-free' reading view stacks, under the text: signature, player pill, scrubber with 13 pt times, an autoplay switch and a pinned two-button footer. This capture has no scroll (scrolls=false); a 6-8 line letter at Large Print will collide with the player or footer.
> Fix: Allow scroll with a pinned footer; drop the scrubber in this view (Play only); move autoplay to the sheet or into the footer row.

> **MINOR** 'Mama, The first weeks' is 12 pt bold muted at the top: tiny in a view that defaults to Large Print, and it reads like a salutation (comma, capital T).
> Fix: 'The first weeks - Mama' using letterDateline, scaled by readingScale.

Quality engineer [gap]

> **MINOR** A free try is counted when the screen opens (read-together.tsx:56), not when anything is read or heard. An accidental open, or one cut short by a crash, burns one of 3 tries per book.
> Fix: Count after the first page is read for 10 seconds or the first play. Test: open and close does not count.

Next letter

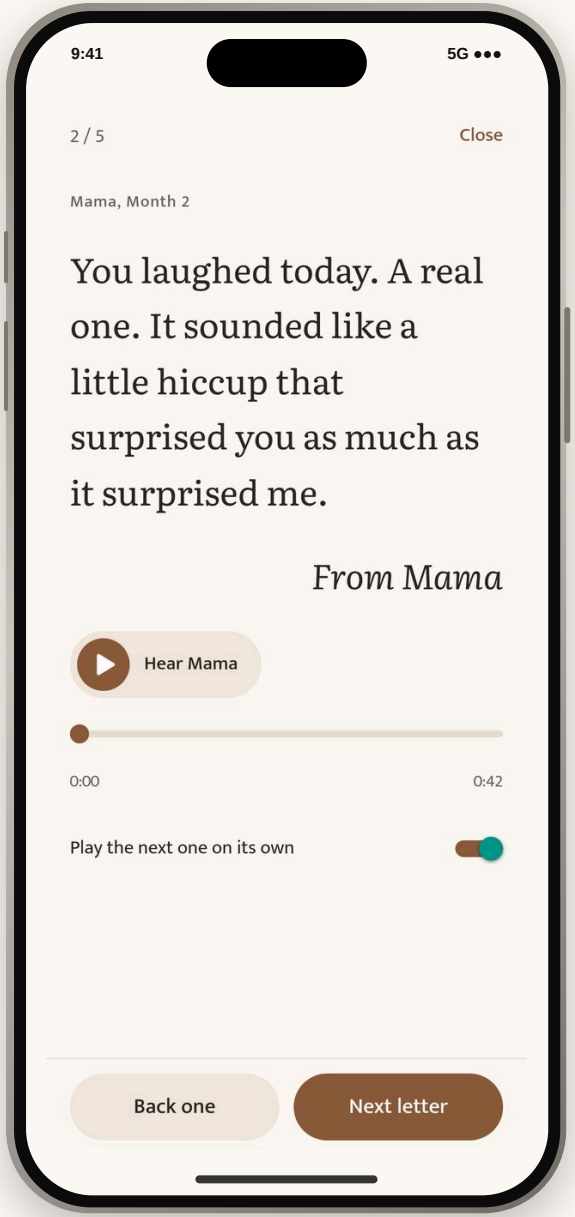

happy path

Next and Back one move through the book. The date line names who wrote it and the month of age.

Product lead [ok]
No findings

Design lead [ok]
No findings

Play the next one on its own

happy path

A switch turns on autoplay: when a recording ends the page turns and the next voice starts.

Product lead [ok]

No findings

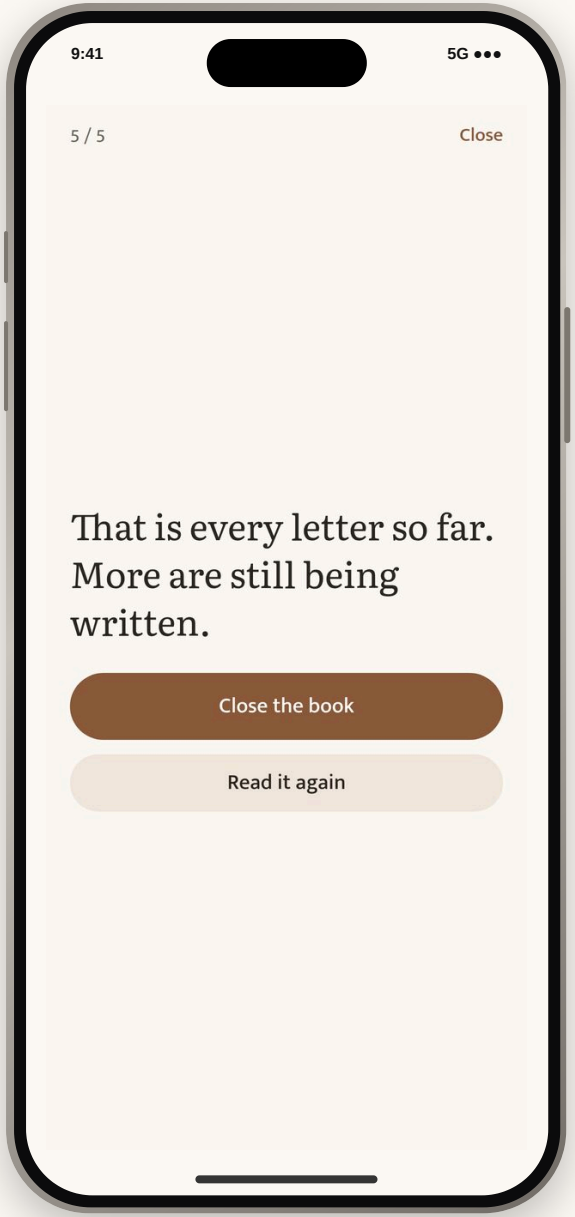

Design lead [fix]

MINOR Switch thumb renders teal on web; confirm the iOS Toggle uses the accent tint. Fix: QA on device.

Quality engineer [fix]

MAJOR Autoplay "play the next one on its own" stops when the phone auto-locks or the app is backgrounded: background audio is off by design (app.config enableBackgroundPlayback false, player.logic stops on background) and there is no keep-awake on this screen. Reading a book to a child with the phone set down ends after the lock timeout. Not observable on web.
Fix: Keep the screen awake while Read together is open and playing, or allow playback-only background audio (recording stays off). Test: device lock-screen test in the plan.

From J11-02

The end of the book

happy path

After the last letter: an end line, a finish button and "again".

Product lead [ok]

No findings

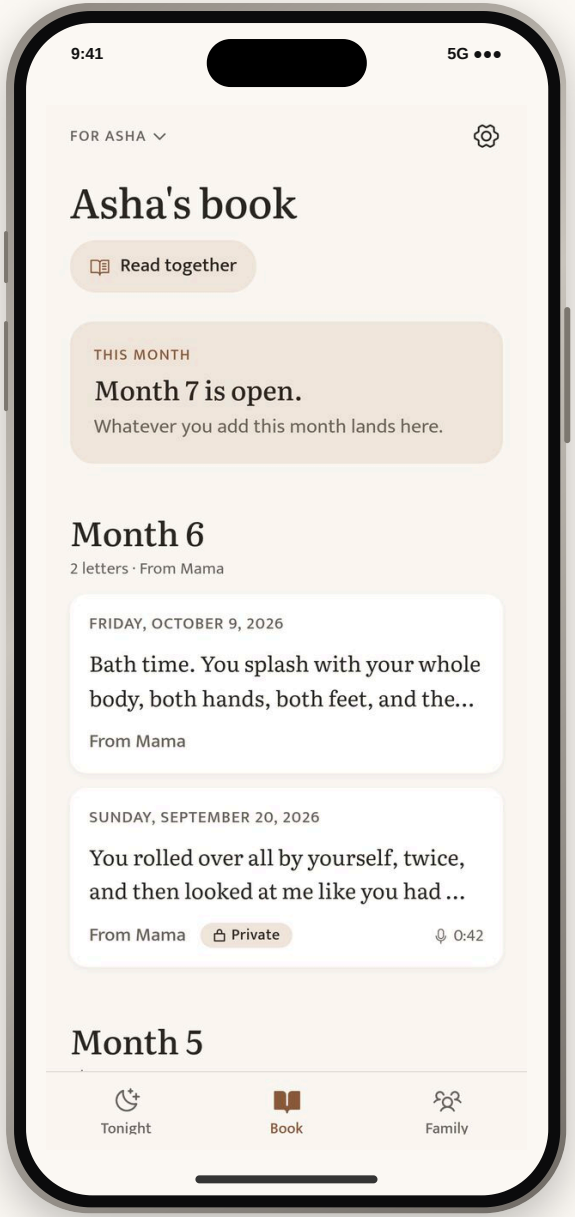

Design lead [gap]

> **MINOR** The best sentence in the app ('That is every letter so far. More are still being written.') sits on a bare screen. 'Opening quotes, never closing ones' is exactly this idea, but the brand device is absent; buttons are mid-screen.
> Fix: Add the opening-quote pair above the line, a static lamp wash, bottom-anchor the buttons.

Quality engineer [ok]

No findings

From J11-03

Opened again and again

happy path

The fourth opening and every one after it are the same as the first: no Plus gate, nothing counted. Letters that exist are always readable and playable; membership only decides whether a new letter can be kept.

Product lead [fix]

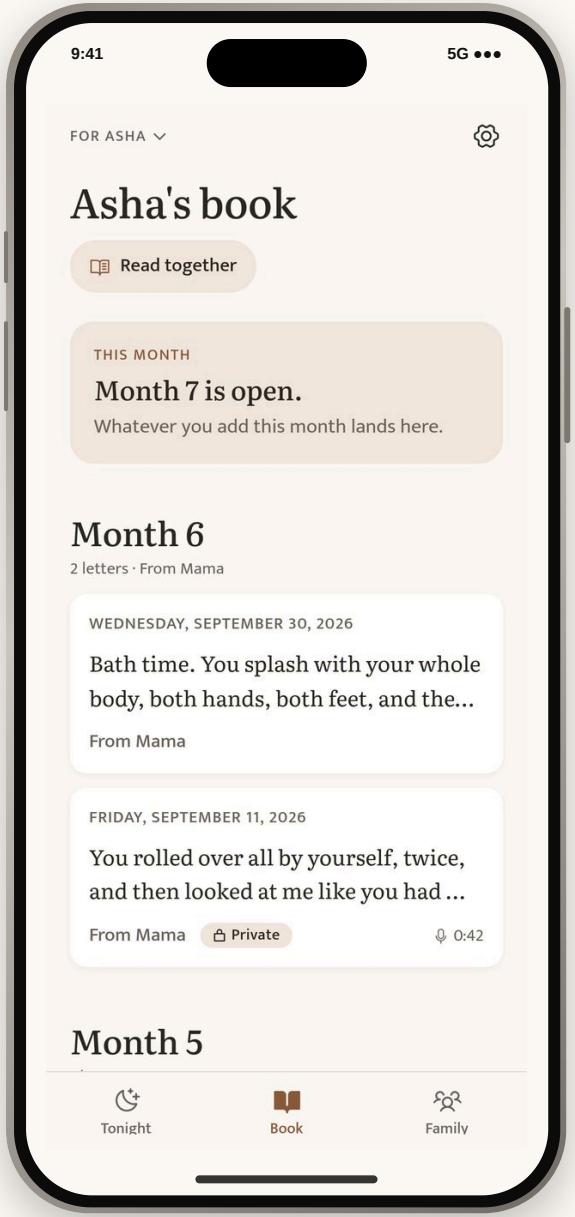

MAJOR The fourth opening of Read together is a paywall, in the middle of the product's most emotional ritual. D-051 left open (edge 5) how these 3 free sessions interact with the 2-free-letters model; shipping both gates could stack two paywalls on a free family, and the page copy ('You have read together 3 times for free') is the old model. Reassurance that every letter stays open is good and correct.
Fix: Founder to decide whether Read together stays gated under D-051. If it stays, keep the copy but have payments confirm the count rule (D-037, on device).

Design lead [fix]

MINOR Same mixed alignment as J03-08, with a 13 pt centred 'not available' line; the device purchase CTA cannot be judged here.
Fix: Left-align, bottom-anchored button group; QA the CTA on device.

Quality engineer [gap]

MINOR The gate offers Plus only through StoreKit, which the web capture cannot run. Offline, cancelled, pending, failed and restored paths are unverified, and App Review tests the paywall flow.
Fix: Run E2E-14 and the StoreKit D-series on a device; record evidence.

Not now returns to the Book

happy path

Declining closes the gate; nothing is lost or locked.

Read together skips quiet days

happy path

A quiet-day mark is not a letter: it is never a page, never played and never read aloud, even a row an older build moved into the book. The count is the letters only. (Seeded fictional family Asha, with older-build rows.)

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

From J11-01

Plan: Plus is off

happy path

The Plan screen says plainly: "Your first two letters are free. Plus lets you keep adding." (no price, no trial length and no count of what is left; Apple's own sheet shows those). Every letter kept stays readable, playable and exportable. Apple handles payment; no card details are seen. There is no Buy button and no "Redeem a code" row on web: both need StoreKit, which exists only in the iOS app. NEEDS A REAL IPHONE: See what Plus adds, Redeem a code, Manage subscription.

Product lead [fix]

BLOCKER Plan screen says writing, reading, playing recordings and export are 'free, always' and that Plus is optional (Read together and extra books only). D-051 (founder, 4 Oct, on origin/main) replaced this: free is the first 2 letters per account, then adding letters needs Plus; existing letters stay readable, playable and exportable. As shown the screen makes a false promise and would contradict the store listing and website, and is a review risk (Guideline 3.1.2).
Fix: Proposed copy: title 'Your first two letters are free.' Body: 'Plus lets you keep adding letters, opens Read together, and covers every child's book. Every letter you have made stays yours to read, play and export, even if you stop.' Add the price and trial line: '$3.99 a month with a 1-month free trial, or $29.99 a year with a 2-month free trial.' (D-053, D-075) and Apple's renewal disclosure. Add a 'Redeem a code' row if D-052 is approved.

MINOR 'Plus is off.' reads like a switch in a developer tool, not a person's status.
Fix: 'You are on the free version.'

Design lead [fix]

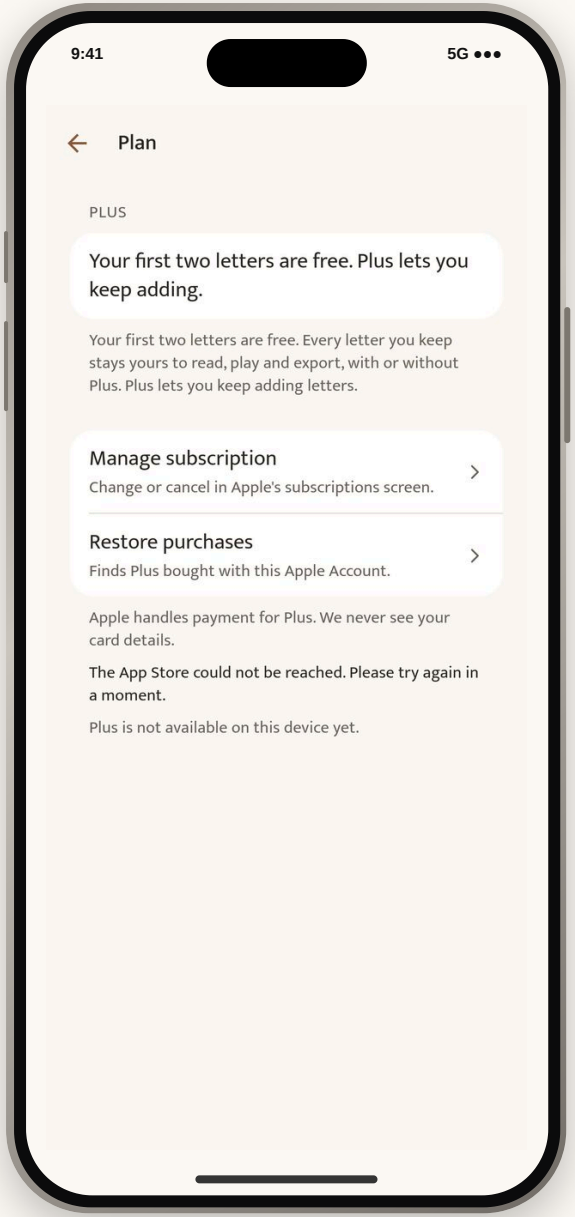

MAJOR Plan explains Plus in one 14 pt muted paragraph under a white status card, with no structure for free vs Plus and no space for a price or buy control (device only). Nothing to scan.
Fix: Two ListSections: 'Free, always' (five rows, check icons) and 'Plus adds' (two rows), then a bottom action region sized for StoreKit.

MINOR The status card 'Plus is off...' looks like a tappable row. 'Manage subscription' has a chevron, 'Restore purchases' (also an action) has none.
Fix: Card variant=tinted for status; same trailing pattern on both rows.

Quality engineer [ok]

No findings

From J11-05

Restore purchases cannot reach the App Store

unhappy path

Restore asks StoreKit. With no store (web) the app answers calmly that the App Store could not be reached and to try again. On a phone with no Plus purchase it would say none was found.

Product lead [fix]

MAJOR Same false 'free, always' claim as J12-01 under the restore error. The error itself is calm and honest.
Fix: Fix with the J12-01 copy.

Design lead [fix]

MINOR The error is a darker 14 pt line between two footnotes: no icon, no caution colour, not distinct. J15-02 handles the same job properly with a card.
Fix: Inline Card with caution icon and role=alert.

Quality engineer [gap]

MINOR Restore purchases is an App Review requirement; only the "store unreachable" branch was seen. No-purchase-found and success branches are unverified (E2E-14 not run).
Fix: Verify restore with sandbox on device before submission and keep the evidence file.

From J12-01

Reminders, off

happy path

One switch and one plain line: a gentle nudge a few evenings a week, never late at night. Nothing is asked of the phone until the switch is turned on.

Product lead [ok]

No findings

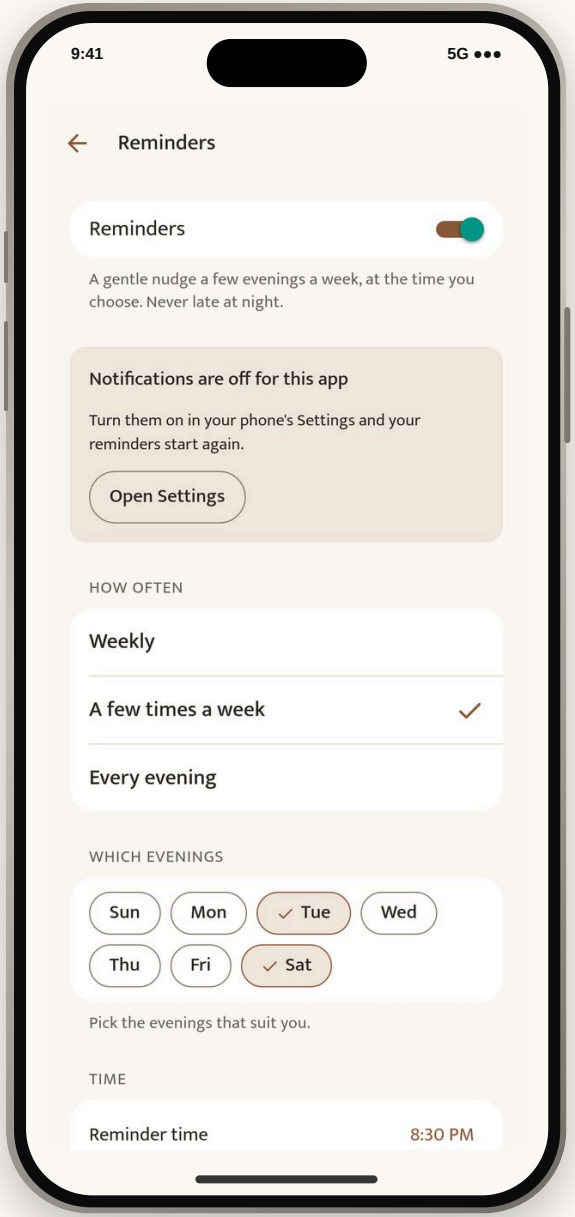

Design lead [ok]

No findings

Quality engineer [ok]

No findings

From J12-01

On, but notifications are not allowed

unhappy path

With the switch on and the phone's notification permission not granted, the screen explains it and offers "Open Settings" (native; it does nothing on web). The choices below stay editable. On iOS, the first time, a priming sheet comes before the iOS alert; the web build has no notification permission, so it skips straight to this state.

Product lead [ok]

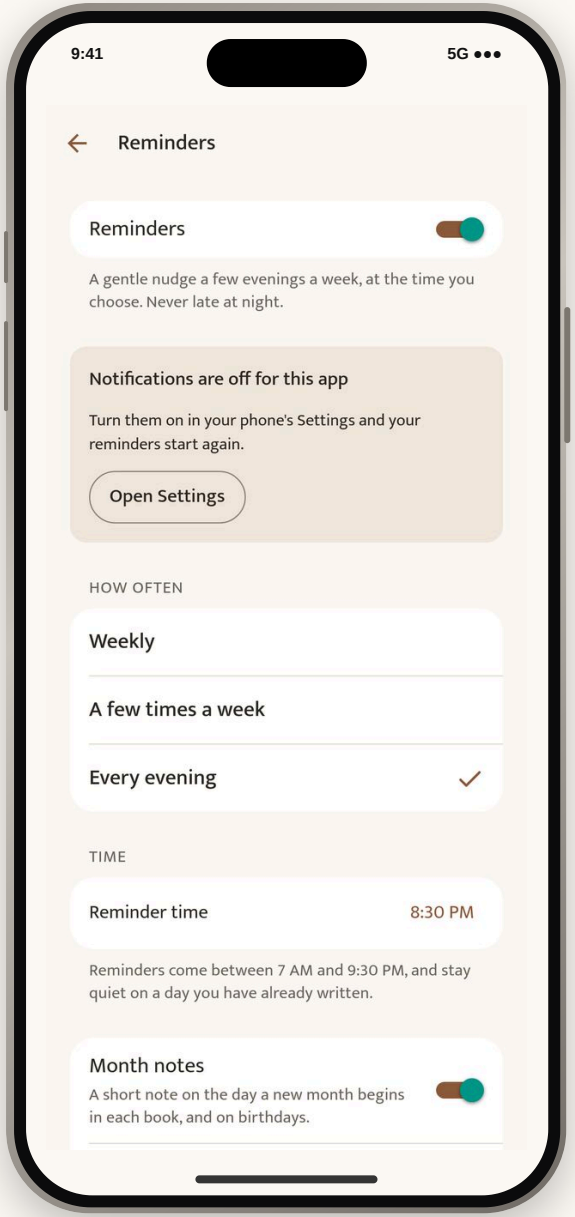

No findings

Design lead [fix]

> **MINOR** The switch shows ON while the OS permission is off, so the control states something that is not true; the card explains it, but the choices below still look live.
> Fix: Show the switch as off until permission exists, or add a status row ('Waiting for permission'); verify the thumb is not the teal RN fallback.

Quality engineer [gap]

> **MINOR** Reminders are one-off notifications planned 21 days ahead (planner horizon 21 days, month 92) and re-planned only when the app opens or the store changes. A person who does not open the app for three weeks silently stops getting them; iOS caps pending notifications at 64 (planner keeps 60).
> Fix: State the behaviour in the help text or use repeating triggers for the evening pattern.
> Tests: planner horizon unit test exists; add a long-absence case.

Every evening

happy path

Choosing a cadence updates the evenings and the time (7 AM to 9:30 PM; quiet on a day already written). The time picker is a native control and does not open on web.

Product lead [ok]

No findings

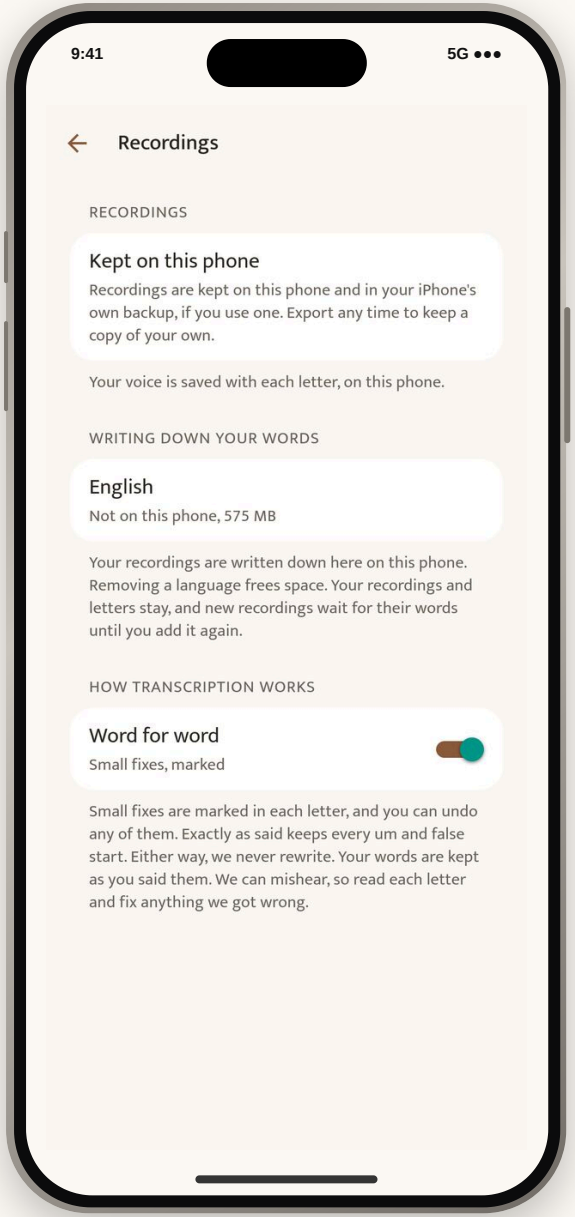

Design lead [fix]

MAJOR Unselected day pills are #FBF8F3 on a white card (1.06:1) with no border, and the selected ones are solid accent with no check. Control edges must reach 3:1 (controlBorder) and selection should not rely on fill.
Fix: ChipGroup filter variant: controlBorder edge, selected = accentSoft + check, 44 pt hitSlop.

MINOR Four switches on the screen; the native time picker value '8:30 PM' is accent text and cannot be verified on web.
Fix: QA the picker on device.

Quality engineer [ok]

No findings

Recordings

happy path

Where the voice lives: on this phone and in the iPhone's own backup if there is one (no backup of our own in v1.0, D-085), and how transcription works (tidying, or word for word). The language row shows the speech model for English as not on this phone, 575 MB (it is downloaded natively; on web there is no model).

Product lead [fix]

MAJOR The Recordings screen ('Tidying', 'Lightly tidied') uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

MAJOR English is shown as 'Not on this phone, 575 MB' with no visible way to download it in the captured text and no Wi-Fi guidance. If the model is not present, new recordings 'wait for their words' (J09-04). I could not verify whether this is a web artifact.
Fix: If a real iOS install can reach this state, add a 'Download' button, a Wi-Fi note and progress, and the failure state.

MINOR 'Writing down your words' and 'How transcription works' name the technology and imply the app writes. VOICE.md asks us not to name it.
Fix: 'Hearing your words' and 'How your words are kept'.

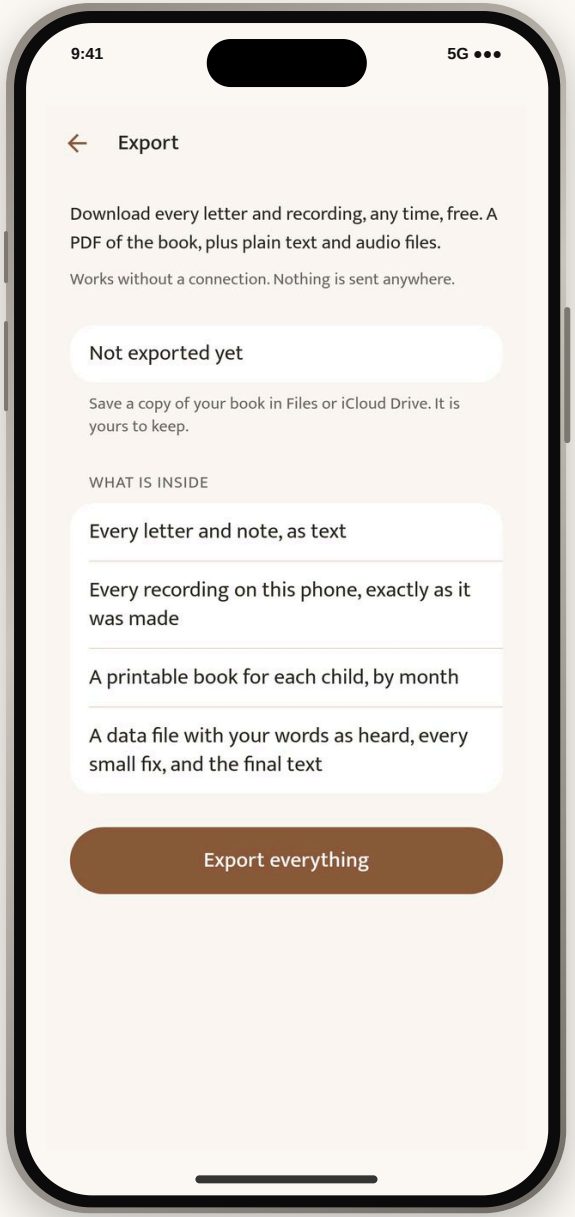

Design lead [fix]

MAJOR The speech model state, the most consequential state in the app (no model, no words), is a muted line 'Not on this phone, 575 MB' in a chevron-less row. No download control, progress or 'Ready' state is visible.
Fix: ListRow with a trailing Button sm 'Download', Wi-Fi note, a progress bar, and a success check when ready.

MINOR 'Tidying' reads as a heading, not as the selected option of a two-way setting; 'Recordings' is repeated as screen title, section label and card title.
Fix: ChoiceGroup list (Tidying / Word for word) with check; merge headings.

Quality engineer [gap]

MINOR Recordings that have no letter (orphans, unrecoverable takes) appear only as a count here: they cannot be played, exported or deleted from the UI, and drafts are excluded from export. The Spoken language and Storage screens could not be captured (expo-file-system throws on web), so they are not critiqued beyond code reading. The 575 MB row shows no cellular-data choice in the captured state.
Fix: List orphans with play/attach/export, include drafts and orphans in the export ZIP, and capture the Language and Storage screens on device.

Export your book

happy path

A "Last export" row ("Not exported yet" until a copy has been prepared) with one plain nudge to save a copy in Files or iCloud Drive; no notifications and no reminder. What is inside (every letter as text, every recording, a printable book per child, a data file with the words as heard, every tidy-up and the final text) and that nothing is sent anywhere. (Seeded fictional family Asha.)

Product lead [fix]

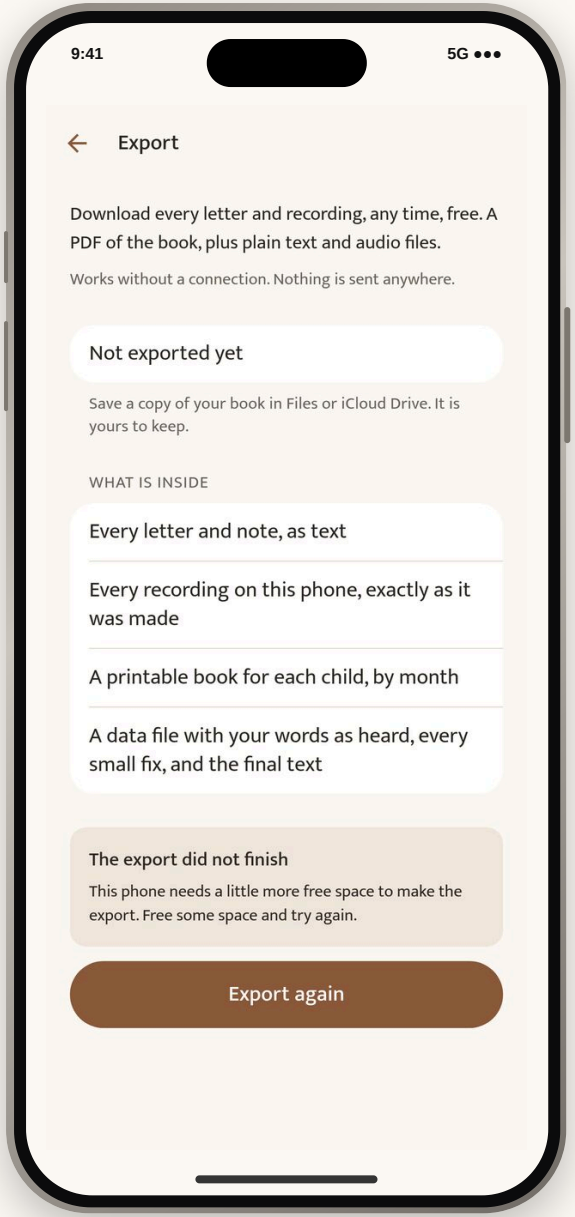

> **MINOR** 'every tidy-up' in the data file line repeats the retired word (D-074).
> Fix: 'every small fix'.

Design lead [fix]

> **MINOR** No title block: body copy starts straight under the header, and 'Export everything' sits mid-screen instead of bottom-anchored; the 'what is inside' rows look like tappable rows.
> Fix: Pin the action at 56 pt; use bullet rows with check icons.

Quality engineer [fix]

> **MAJOR** Export completeness gaps: tombstoned letters, drafts (typed and recorded) and orphan recordings are not exported (build.logic.ts:9; device.ts snapshot reads listEntriesForChild only), although the screen says "every letter and recording". The ZIP writer has no ZIP64 (verify.ts "zip64_not_expected"), so very large books fail; the PDF is rendered from one HTML for the whole book in a web view, memory unmeasured at 1,800 letters; the 2-minute budget for 230 MB (PRD 7.1) has no timing.
> Fix: Include drafts/orphans/deleted in a "not in the book" folder, add ZIP64 or split by year, run a 5-year export on SE 3. Tests: export-golden with draft + orphan; size 4 GB boundary.

The export did not finish

unhappy path

On a phone Export builds a ZIP in the cache and opens the iOS share sheet. The web build has no file system, so it lands on the honest failure card with "Export again". The card says the phone needs more free space (the web has none to give).

Product lead [fix]

> **MINOR** Every export failure is shown as 'needs a little more free space', which would be untrue for other causes. The step note says this is the web's missing filesystem; I could not verify what the app shows for other errors. VOICE.md's error pattern also puts 'your words are safe' first.
> Fix: 'That did not work this time. Your letters are safe on this phone.' then a cause only when known.

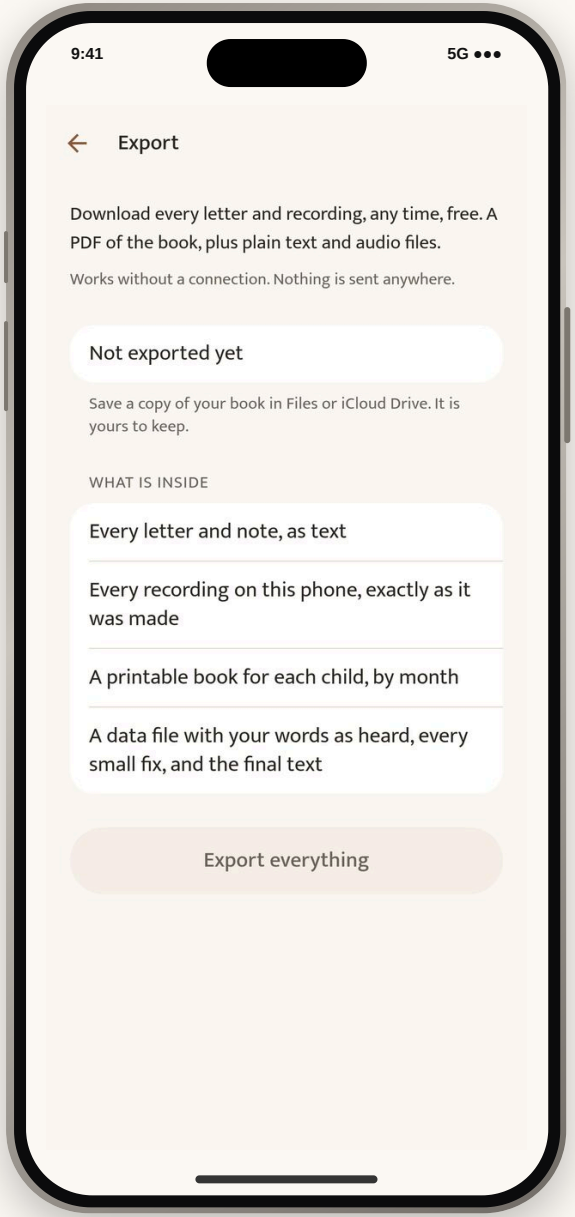

Design lead [fix]

> **MINOR** The failure card uses the same accentSoft tint as the 'Early version' banner and 'Notifications are off', so an error is indistinguishable from info. Message is clear and calm.
> Fix: Add caution icon and 3 pt `caution` edge; announce on appear.

Quality engineer [gap]

> **MINOR** The failure card is correct on web only by accident. On a phone, the Share sheet being cancelled deletes the ZIP and still shows the after-share line (device.ts:279 finally delete, export.tsx share()); to retry, the whole export is rebuilt. If Sharing is unavailable the file is deleted and success is implied.
> Fix: Keep the ZIP until the person leaves the screen; detect cancel versus share. Test: share cancelled keeps the file; unavailable shows an error.

From J15-01

Export with an empty book

unhappy path

Nothing has been written yet, so "Export everything" is switched off (greyed) and the page still says what an export would hold. There is no empty-export error to reach.

Product lead [ok]

No findings

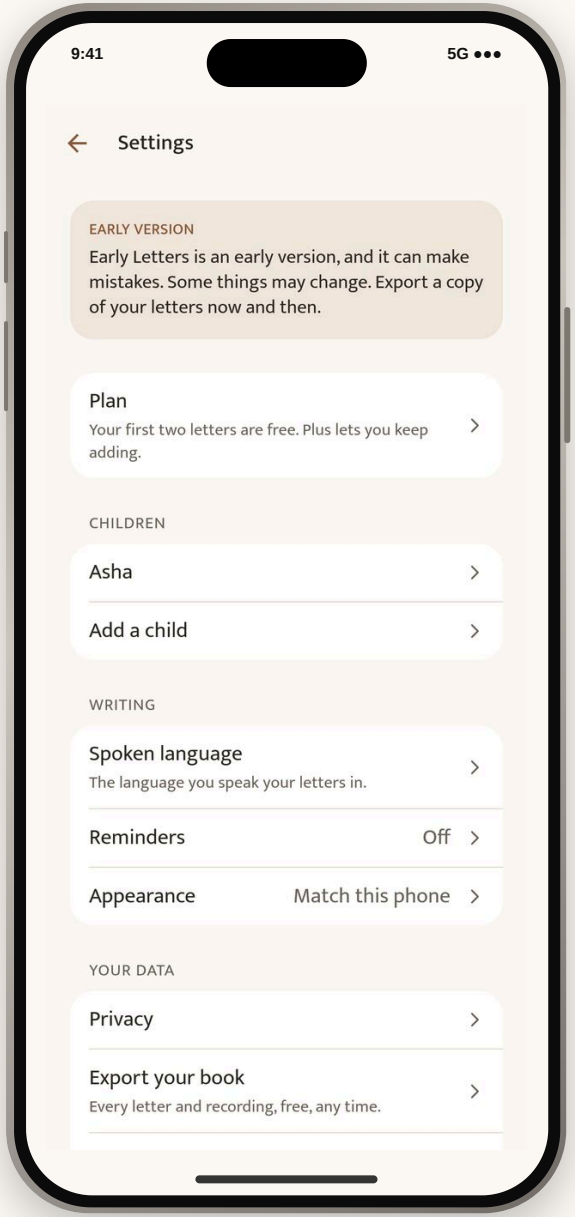

Design lead [fix]

> **MINOR** 'Export everything' is disabled with no reason beside it.
> Fix: Helper under the button: 'Write a letter first.'

Quality engineer [ok]

No findings

From J15-01

Settings

happy path

Every destination one tap away: Plan, children, spoken language, reminders, appearance, privacy, export, Recently deleted, recordings, storage, help, legal, licences and version. No Account or Delete account rows in v1.0, since there are no accounts. An "early version" note stays at the top.

Product lead [fix]

MAJOR Plan row subtitle describes the pre-D-051 model (see J03-06).
Fix: 'Your first two letters are free. Plus lets you keep adding letters.'

MAJOR The Settings footer uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

MINOR No row to delete a book or erase all data on the phone (see _journey).
Fix: Add 'Delete this book' per child and 'Erase everything on this phone' under Your data, each with a calm confirm.

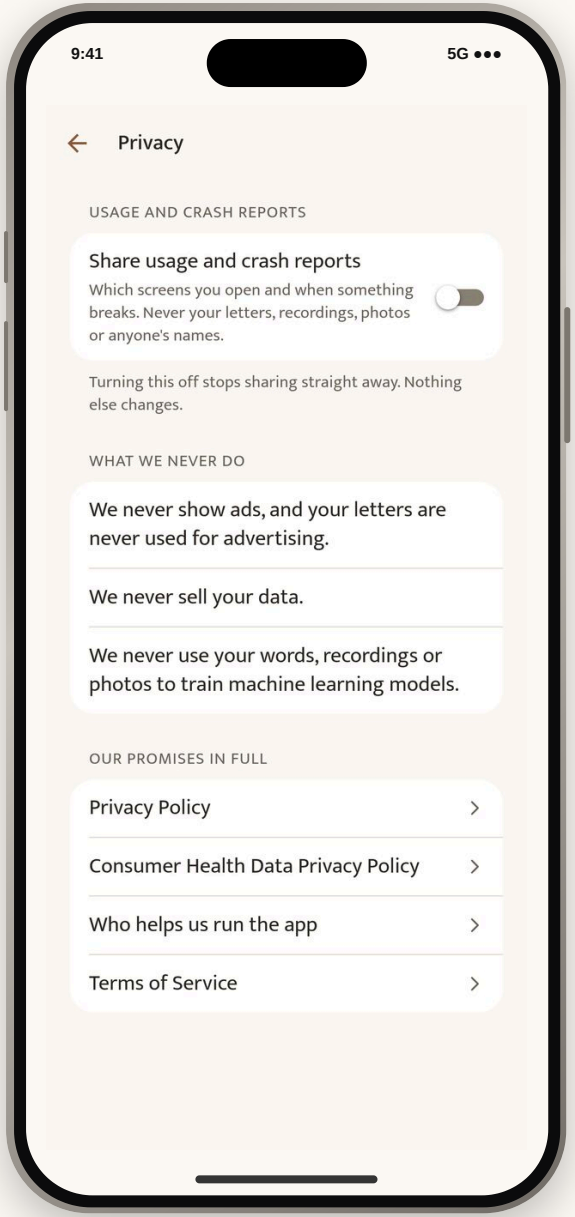

Design lead [fix]

MAJOR Settings opens with an 'Early version... can make mistakes' banner, then Plan: the two loudest items are an apology and monetisation, while children, language and privacy come after. Hierarchy is inverted for a trust-first product.
Fix: Move Plan to its own section above About, shrink 'Early version' to a footnote row, keep Children first.

MINOR Header is a 17 pt inline title with an arrow, not a large title; 'If you are struggling' and 'Licences' expand in place while other rows push, mixing chevron-down and chevron-right.
Fix: Large title (display) on the root settings list; push Licences to its own screen.

Quality engineer [gap]

MINOR Settings has no Accessibility statement link (LEGAL-REQ-052, listed under Settings > Legal in LEGAL-REQ-008) and Consumer Health Data/Subprocessors sit under Privacy only. Help is a mailto: that fails silently when no mail account is set (Linking.openURL promise ignored). The "early version" note at the top: a beta label in a store build can attract App Review questions. Settings-open budget (<300 ms) has no test.
Fix: Add the statement row, a fallback that copies the support address, remove the early-version note before submission or confirm with counsel. Test: row present; mailto failure shows a toast.

Privacy

happy path

The usage-and-crash-report switch (off until the person says yes), what is never done (ads, selling data, training models), and links to the full policies.

Product lead [fix]

> **MINOR** 'Consumer Health Data Privacy Policy' is a heavy name for a tired parent and the section 'Who helps us run the app' shows only 'Terms of Service' under it in the text I read, so the subprocessors page (/subprocessors, D-063) may not be linked. I could not verify the link from the text alone.
> Fix: Link the subprocessors page under that heading and move Terms to the legal list. Keep the legal title but add a one-line plain description.

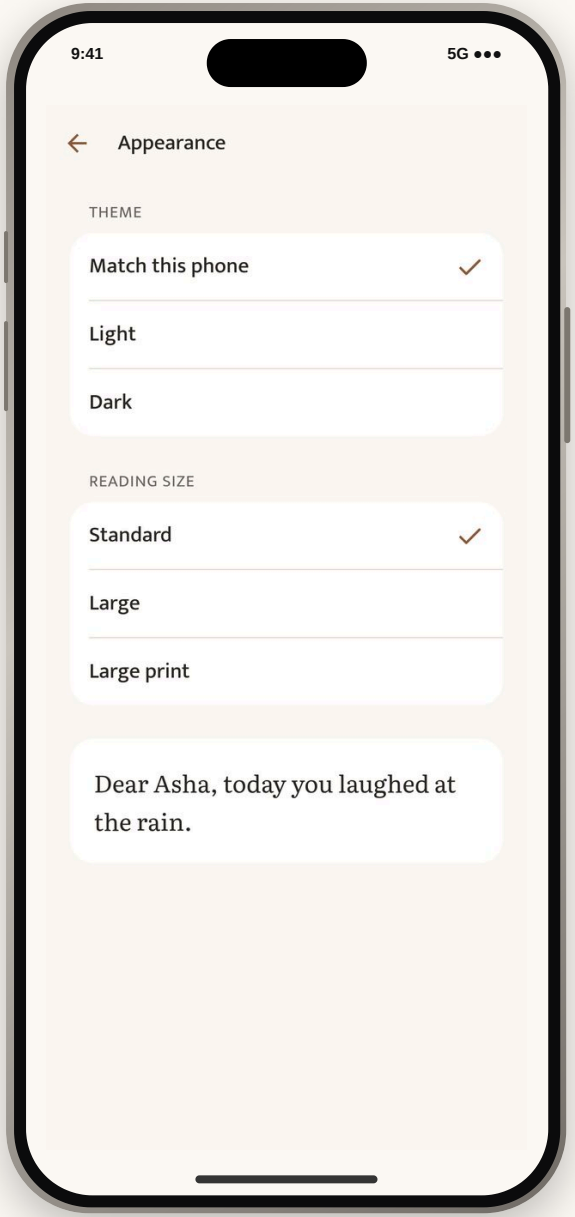

Design lead [fix]

> **MINOR** 'What we never do' lines are rendered as list rows with dividers, like navigation rows, but are not tappable.
> Fix: Card with check bullets, no dividers.

Quality engineer [fix]

> **MAJOR** Same inaccurate crash-report claim as J04-04: the switch label "Share usage and crash reports" does nothing for crashes in v1.0.
> Fix: As J04-04.

Design lead [fix]

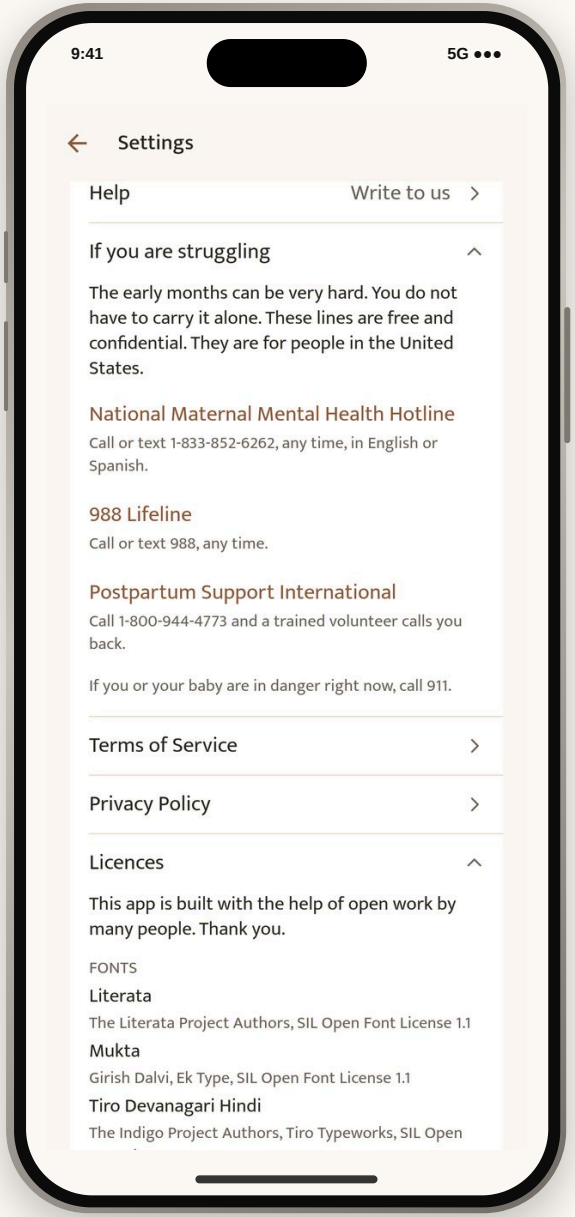

MAJOR The three helplines (1-833-852-6262, 988, +1 800 numbers, 911) are all US numbers inside an app offered in seven languages; a Hindi, Arabic or Portuguese reader elsewhere gets numbers that may not connect.
Fix: Region-aware list from device region with an international fallback (findahelpline.com); keep 'always available'.

MINOR Names are accent links but the numbers are plain text; there is no 44 pt call row.
Fix: Rows with tel: action and a Call label.

Quality engineer [gap]

MINOR Helpline numbers are `tel:` links (silent failure on devices without telephony). The list and wording are from the content package, not reviewed here for the seven launch languages or non-US locales.
Fix: Review lines per locale with a clinician/counsel; handle openURL failure by showing the number to copy.

From J16-04

Licences

happy path

Open-source and model licences listed in place.

Product lead [ok]

No findings

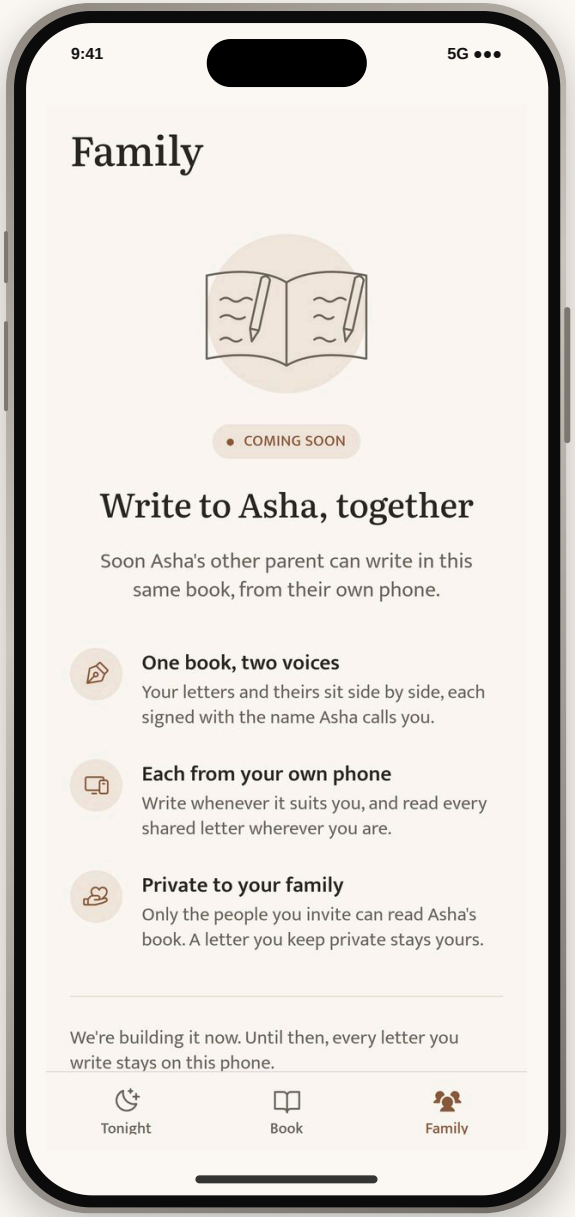

Design lead [fix]

> **MINOR** Licences expand in place to about 2,700 pt of 12-13 pt text inside a Settings list: a scroll trap in the middle of navigation.
> Fix: Push to its own screen with section headers.

Family tab: coming soon

happy path

The tab keeps its place and describes what is coming (one book, two voices; each from their own phone; private to the family) with a promise that every letter stays on this phone until then. There is no invite flow in v1.0.

Product lead [fix]

MAJOR A whole bottom tab, a third of the navigation, is given to a feature that does not exist in v1.0. It promises 'Write to Asha, together' with no date, and takes the place of something useful. D-055 allows co-parent only at launch, and on-device v1.0 has no accounts to share through.
Fix: Remove the Family tab in v1.0 (or replace it with a Settings row). Put sharing back when it works.

Design lead [fix]

MAJOR The only action ('Tell me when it's here') is below the fold at 402 x 874 even before iOS insets (full capture: it sits under the tab bar; the last sentence is cut by it). With 62/34 pt insets and large text it is further away, and nothing signals scrolling.
Fix: Pin the button above the tab bar, shrink the art to about 120 pt, use space[6] rhythm.

MAJOR A third of the primary navigation is a 'coming soon' page for something v1.0 cannot do. It costs a tab slot and teaches the person that a tab may be empty.
Fix: Ship v1.0 with two tabs, keep 'Write together' as a row in child settings; or hold for product decision.

MINOR Titles sit at three heights (Tonight about 72, Book about 82, Family about 38) and Family is centred while all others are start-aligned.
Fix: One root large-title component.

Quality engineer [fix]

MAJOR A whole tab labelled coming soon, plus a co-parent row and "I was invited" that lead to a placeholder, is a known App Review risk (completeness and placeholder content, guideline 2.1 as I recall it; not verified against current guidelines). Dormant code is also linked into the binary: Supabase, Google Sign-In, passkeys, Apple auth, and the Sign in with Apple and associated-domains entitlements (app.config.ts:193), while the privacy manifest declares no collected data. Routes are guarded by Redirect when features are off (verified for (auth), account, delete-account).
Fix: Decide with counsel: hide the Family tab in v1.0 or word it as a plan; drop the Apple Sign In entitlement and unused SDKs from the v1.0 build, or document them in the review notes. Test: CI config assertion on entitlements and Info.plist keys (LEGAL-REQ-007).

Tell me when it's here

happy path

The one action stores a local "tell me" flag and says only what is true: "Noted on this phone. When the update arrives, you will see it here." Nothing is sent to us except a count of the tap. (The card on Tonight that fulfils the second sentence ships with co-parent sharing in v1.1.)

Product lead [fix]

MAJOR 'Thank you. We'll let you know here when it's ready.' The flag is stored locally and nothing is sent, so we have no way to tell the person. 'Here' only works if they open the tab, and with no accounts or email we cannot notify. This promises something the product cannot do.
Fix: If the tab stays: 'Noted. Look for Family in the app after an update.' Better, drop the button and use the website's notify list for people who want email.

Design lead [ok]

No findings

Quality engineer [gap]

MINOR "Tell me when it's here" stores a local flag only (no email or push is collected), so the person cannot actually be told. Expectation gap, not a data risk.
Fix: Reword to "We will mention it in an update" or collect nothing and remove the button. Test: content rule.

From a child's settings

happy path

The "Write this book together: Soon" row opens the same coming-soon sheet, with Close.

Product lead [fix]

> **MINOR** Same coming-soon sheet reached from child settings; a dead-end row.
> Fix: Remove the row until sharing exists.

Design lead [fix]

> **MINOR** This modal closes with a bottom text 'Close', a third close idiom (Review: top-left text; sheets: X). It also ends without the Tell me action that the same copy has on the tab.
> Fix: Use the sheet pattern; show the same action.

Quality engineer [ok]

No findings

No "I was invited" door

happy path

No invite can exist without a server, so the button that could only open a coming-soon sheet is gone. It returns with co-parent sharing. An invite link that is opened still lands on the coming-soon sheet.

Product lead [gap]

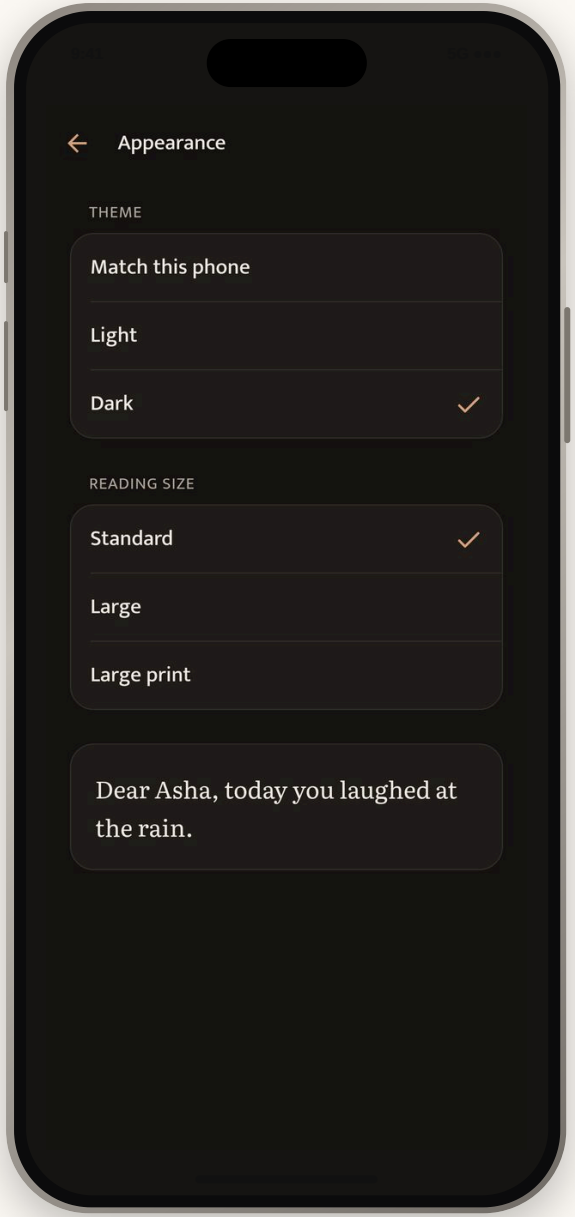

MAJOR An invited person sees copy written for the inviter ('Soon your child's other parent can write in this same book'), when they are the invited parent. It names 'your child' and 'Tell me when it's here', and does not say whether the invitation link will still work later.
Fix: Dedicated invited page: 'You were invited to write in a book. Sharing is opening in a later update. Until then you can start your own.' Say whether the link is kept.

Design lead [fix]

MINOR 'Write to your child, together' addresses an invited person as a parent; an invited grandparent or aunt is not 'your child's other parent'.
Fix: Neutral copy for the invited path ('Write to {child}', 'Soon you can add your letters to the same book').

Appearance: Dark

happy path

Theme is per phone: Match this phone, Light or Dark. Choosing Dark re-themes every screen at once (the app supports dark mode).

Product lead [ok]

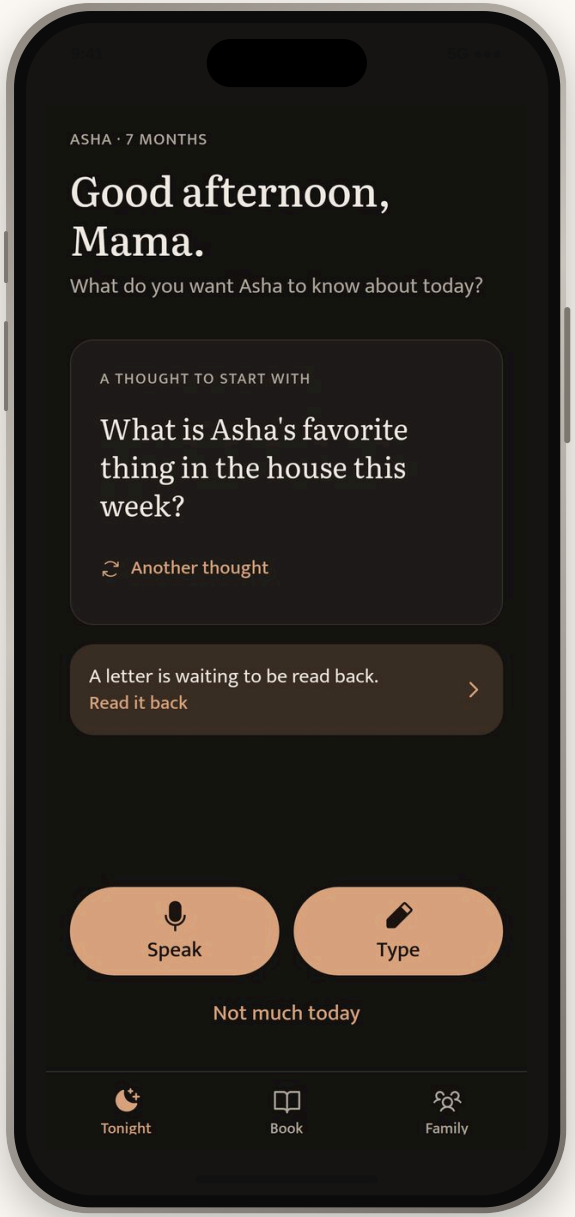

No findings

Design lead [fix]

MAJOR On the screen where Dark is chosen the page background stays light (#FBF8F3) while the list cards flip dark and the header title 'Appearance' is near-invisible light-on-light. It may be a transition frame, but if it persists the Dark selector itself is unreadable. Fix: Bind the navigation container background and header colours to the theme (not only components); capture a settled frame to confirm.

Quality engineer [ok]

No findings

Tonight, dark

happy path

The home tab in the dark theme.

Product lead [ok]

No findings

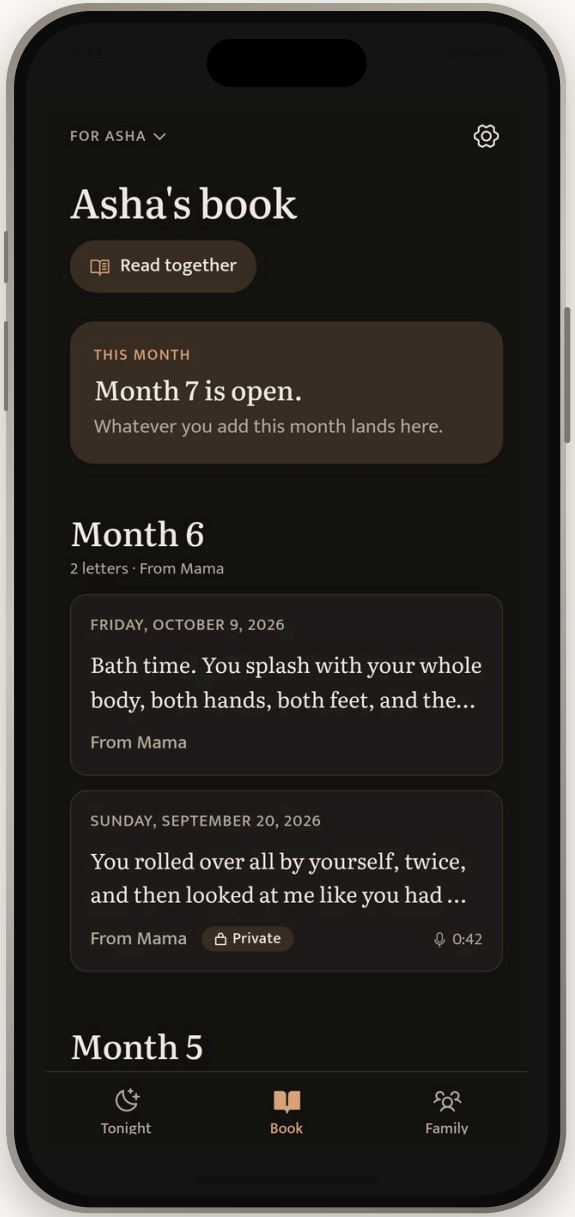

Design lead [fix]

MAJOR The bottom tab bar stays light cream (about 17:1 against the page, a bright strip at night) in dark mode, with light-mode label colours. This breaks 'written for 2 a.m.'.
Fix: Tab bar bg dark.surface (#1B1917), hairline dark.line, selected dark.accent, unselected dark.textMuted; confirm whether the native tab bar picks this up on iOS.

MINOR Dark mode has no lamp atmosphere: lamp, lampGold and duskSurface tokens exist 'to match the website' and none appears.
Fix: Static LampLight pool at <=16% behind the prompt card, plus grain; none under Reduce Transparency.

Quality engineer [ok]

No findings

Book, dark

happy path

Chapters and cards in the dark theme.

Product lead [ok]

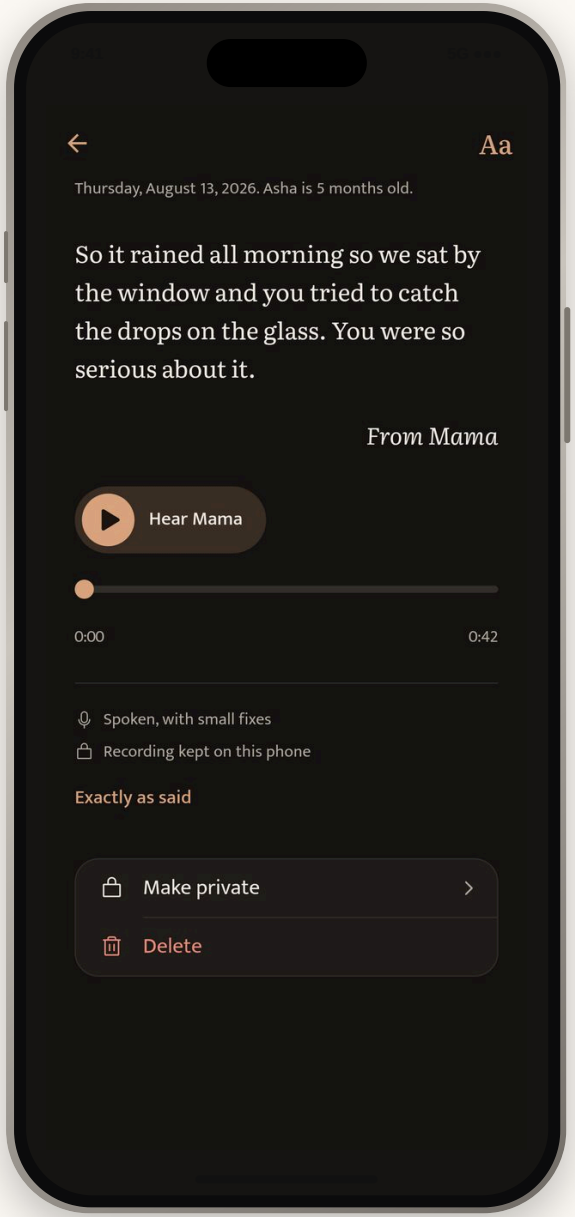

No findings

Design lead [fix]

MAJOR Tab bar is light again, the Settings gear (ink #2B2722 on #161412) is 1.24:1 and effectively invisible, and the Read together icon (#8A5A3B on #3A2E25) is 2.26:1.
Fix: Resolve all icon colours via useTheme (dark.accent / dark.textMuted); lint for hex or tokens.light outside the theme provider.

Quality engineer [ok]

No findings

A letter, dark

happy path

The letter page in the dark theme.

Product lead [fix]

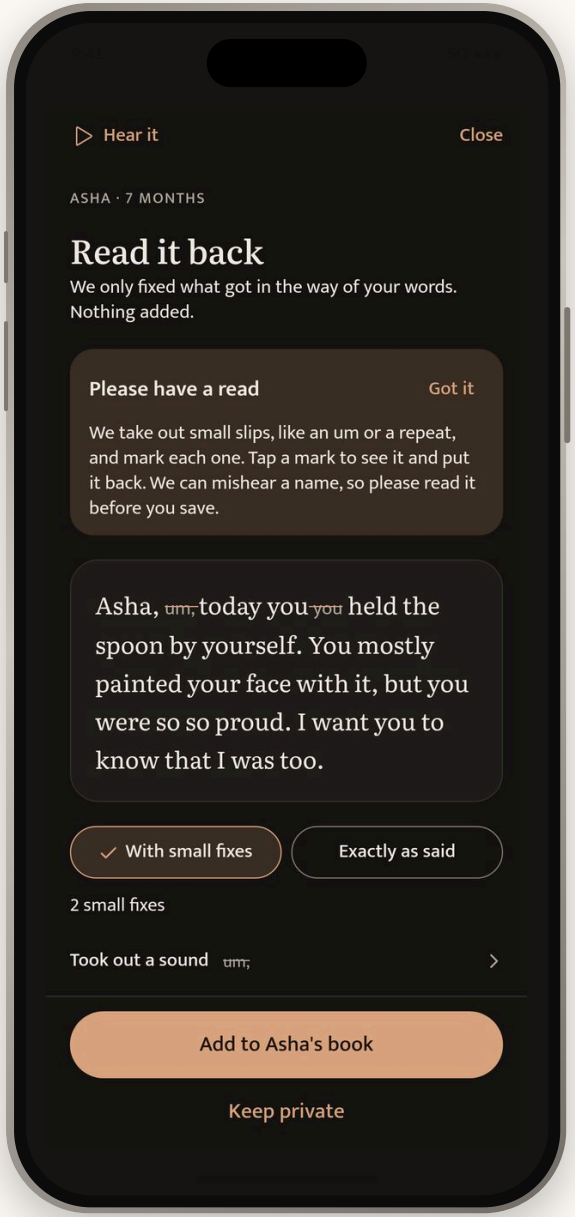

MAJOR The letter page ('Spoken, lightly tidied', dark theme) uses 'tidy' / 'lightly tidied' language. D-074 (founder) says 'Lightly tidied' and 'Tidying' leave the product, and VOICE.md bans words that suggest software tidied a letter. It also undercuts the promise that the words are exactly as said.
Fix: Replace with the plain facts. Edited letter: 'Spoken, small slips fixed'. Unedited: 'Spoken, word for word'. Promise: 'We fix what the microphone got wrong. A stray "um", a misheard name, a missing comma.' Footer: 'We never rewrite your words. We only fix what the microphone got wrong.' Rename the 'Tidying' setting to 'Fix small slips'.

Design lead [fix]

MAJOR Light-mode values leak into the dark letter page: the lock icon in 'Make private' (ink on dark raised, 1.13:1) is invisible, the back arrow (#8A5A3B on #161412) is 3.16:1, and the scrubber track is a bright cream bar, the loudest thing on a dark page.
Fix: Theme-resolve icon colours; scrubber track dark.line with accent fill.

Listening, dark

happy path

The listening screen in the dark theme. (Fake microphone tone on web.)

Product lead [ok]

No findings

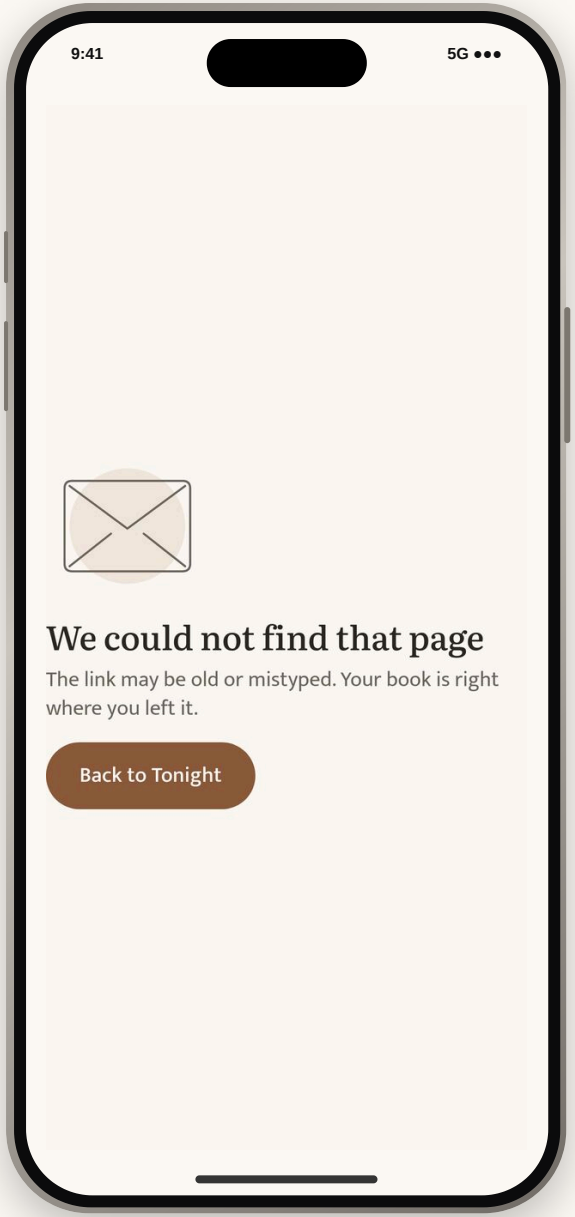

Design lead [fix]

> **MINOR** The disc uses the light-mode `recording` (#B04539, 3.29:1 against the dark page) instead of dark.recording (#F08C7C, 7.65:1), and the halo is nearly invisible. The listening screen is the natural showpiece for the website's night scene and is flat.
> Fix: Use dark.recording for the disc, LampLight warmth='recording' with vignette at night tone; static under Reduce Motion.

Unknown route (404)

unhappy path

A designed not-found screen in the product voice replaces Expo Router's "Unmatched Route" page. It never shows the address, and has one way back: Back to Tonight. Reached by a malformed or old link.

Product lead [gap]

MAJOR A malformed link or a mis-tapped universal link (earlyletters.com paths, D-063) opens Expo Router's developer 'Unmatched Route' page with a Sitemap link and a raw URL. It is not a customer screen.
Fix: Design a calm not-found screen: 'We could not find that page. Back to Asha's book.' with one button. Route unknown links to Tonight.

Design lead [fix]

MAJOR Unknown routes fall to Expo's default 'Unmatched Route': black background, bold system font, the raw URL (with the seed query) and a 'Sitemap' link, in a warm paper app. A malformed deep link or universal link lands here.
Fix: app/+not-found.tsx using EmptyState: 'We couldn't find that page.' + full-width 'Back to Tonight'; theme-aware; hide URL.

Quality engineer [fix]

MAJOR No not-found screen: Expo Router default "Unmatched Route" with a developer Sitemap link (captured). Reachable by a malformed link; unknown paths pass through the native intent unchanged (+native-intent.tsx:72). It also exposes route names to anyone who triggers it.
Fix: Add app/+not-found.tsx with a calm card that goes home, and map unknown paths to "/" in redirectSystemPath. Test: unit test for unknown path and a web e2e for the card.

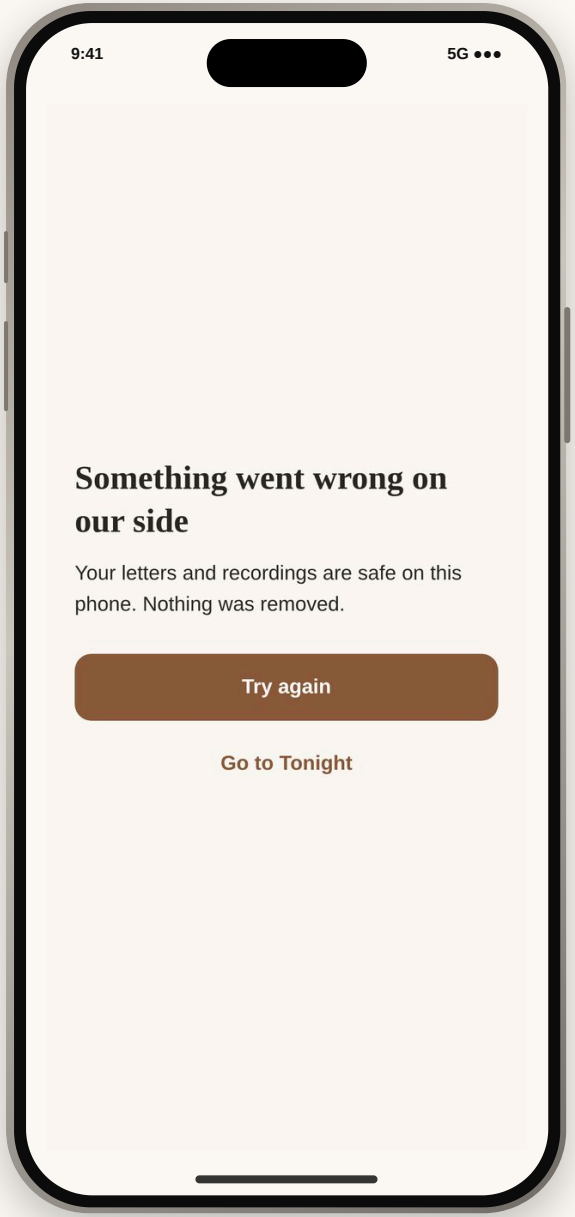

Listen opened without a tap

unhappy path

Opened by a link, a restored screen or a stale route (not by Speak), Listen waits: "Nothing is recording yet. Tap Start when you want to speak." The microphone is not touched. On a phone the scribe://listen link goes to Tonight instead.

Product lead	Design lead	Quality engineer
Not reviewed	*Not reviewed*	*Not reviewed*

A screen crashes (fault injected)

unhappy path

The root error boundary shows a calm screen instead of a blank page: "Something went wrong on our side. Your letters and recordings are safe on this phone." with Try again and Go to Tonight. No error text, code or stack is shown or logged. Reached only by injecting a fault (Intl.PluralRules made to throw before opening Review); no normal action gets here.

Product lead [gap]

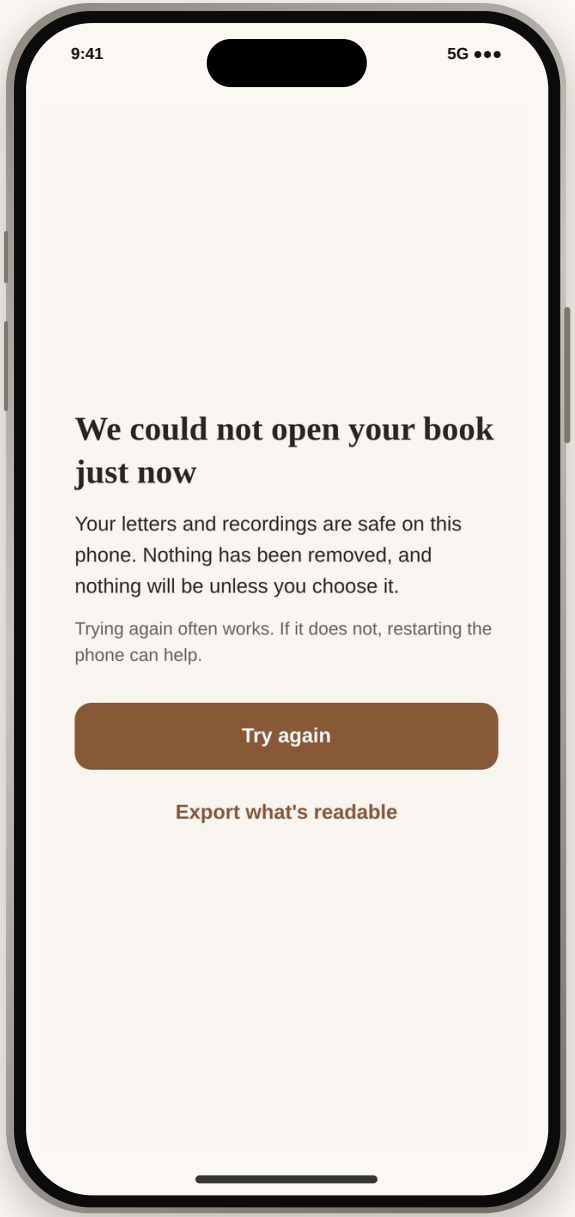

BLOCKER A crash leaves a blank page with no message and no way back. An app that holds a parent's voice recordings must say 'Your letters are safe' and offer a way forward. A blank screen is the most trust-damaging launch failure.
Fix: Add an error boundary with calm copy: 'Something went wrong on our side. Your letters and recordings are safe on this phone.' and 'Back to Tonight'. Report content-free crash data only if opted in (D-003).

Design lead [fix]

BLOCKER A render crash leaves a blank white page: no message, no way back, white flash in a warm or dark app. Any real crash (not only the injected fault) ends here, the opposite of 'your words are safe'.
Fix: Export an ErrorBoundary from app/_layout (expo-router) using EmptyState: 'Something went wrong. Your letters are safe on this phone.' + 'Back to Tonight' and 'Try again'; set the native root background to bg so there is no white flash.

Quality engineer [fix]

BLOCKER No error boundary anywhere (grep for ErrorBoundary, setJSExceptionHandler and ErrorUtils in apps/mobile/src returns nothing). A render error leaves a blank page in the web capture, and a thrown error in an event handler or timer is fatal in a native release build. What Expo Router shows by default in a native release build was not observed. Errors outside a route (root layout, SessionProvider, UIProvider) are not covered by any boundary. Combined with synchronous SQLite calls that throw (disk full, migration failure `local_db_migration_failed`, store.ts open()), the app can crash at launch every time with no way to reach Export or the recordings.
Fix: Export an ErrorBoundary from the root layout (calm card: "Your letters are safe", Try again, Export), catch migration failure at open() with a recovery screen, install a global handler that never logs content. Tests: render-throw e2e (J20), failing migration test, handler unit test.

The book cannot be opened (fault injected)

unhappy path

If opening the database or updating it throws, a recovery screen replaces the app: the letters are safe on the phone, nothing is removed, and there are two actions: Try again and Export what's readable. No delete, reset or rebuild exists here. Reached only by a preview-only switch (?fault=launch-once); on a phone it follows a failed database open or update.
